## 0 Introduction: a trailer to the book

1

An apology

2

The problem

2

Vision in action

6

Illusions

8

Damage to the system

12

The brain

13

The study of vision

17

---

## 1 The first steps in seeing

19

The eye

20

The photoreceptors

32

The retinal ganglion cells

35

Beyond the eye—the optic nerve

37

The lateral geniculate nucleus

38

---

## 2 Signalling changes

45

Introduction

46

A problem

47

Retinal ganglion cells and receptive fields

49

Receptive fields and image processing

51

Some effects of retinal processing

58

Conclusion

66

---

## 3 To the cortex

68

The primary visual cortex (aka V1, striate cortex, area 17)

69

Orientation selectivity

70

Organization of the primary visual cortex

75

Simple cells	78
Complex cells	82
Hypercomplex cells	82
Trigger features	84
Face cells	86
The grandmother cell hypothesis	87
Beyond V1—the extrastriate areas	87
<hr/>	
<b>4 Spatial vision</b>	<b>98</b>
Experiments on humans	99
The tilt after-effect	100
A neural explanation of the tilt after-effect	100
Tilt-specific threshold elevation	104
The size after-effect	106
Simultaneous tilt and size illusions	109
Size-specific threshold elevation	111
Where in the brain do after-effects occur?	113
Contrast sensitivity	113
Peripheral vision	117
Retinal versus real size	120
Some visual illusions explained?	124
Texture	125
<hr/>	
<b>5 Colour vision</b>	<b>132</b>
Introduction	133
What is colour, and why would you want to see it?	133
The nature of light	134
A single-cone system—monochromatic vision	142
A two-cone system—dichromatic vision	148
A three-cone system—trichromatic vision	152
Comparing activity in cones—colour opponency	155
Colour-opponent cells	157
Two-colour vision systems	158
Colour blindness	158
Cortical processes in colour vision	162
Colour constancy	164

Simple cells	78
Complex cells	82
Hypercomplex cells	82
Trigger features	84
Face cells	86
The grandmother cell hypothesis	87
Beyond V1—the extrastriate areas	87

#### **5 Colour vision** **132**

Introduction	133
What is colour, and why would you want to see it?	133
The nature of light	134
A single-cone system—monochromatic vision	142
A two-cone system—dichromatic vision	148
A three-cone system—trichromatic vision	152
Comparing activity in cones—colour opponency	155
Colour-opponent cells	157
Two-colour vision systems	158
Colour blindness	158
Cortical processes in colour vision	162
Colour constancy	164

Back to the cortex	165
Cerebral achromatopsia	165
<hr/>	
<b>6 The perception of motion</b>	<b>172</b>
Two ways of seeing movement	173
A motion detector	177
The motion after-effect	180
Speed	183
Apparent motion	184
Motion blindness and area MT (V5)	187
How do we tell what moves and what stays still?	194
Vection and stability	194
Vection and vomit	199
Conclusion	199
<hr/>	
<b>7 The third dimension</b>	<b>203</b>
Introduction	204
Stereoscopic vision	205
Red–green anaglyphs	208
Stereoscopes	211
Free fusion	211
The correspondence problem and random dot stereograms	215
Physiological mechanisms and disparity	219
Stereo-blindness	220
Motion parallax	220
Pictorial cues	222
Occlusion or interposition	222
Size cues	223
Shading and shadows	224
Aerial perspective	225
Size constancy, depth perception, and illusions	227
Conclusions	234
<hr/>	
<b>8 The development of vision</b>	<b>237</b>
Introduction	238
Measuring a baby's vision	238
Spatial vision	242

Feature detection	245
Motion perception	246
Colour	247
Depth perception and stereopsis	247
Development of face perception	248
Summary	249
Selective rearing experiments	250
Problems of vision	254
Putting things right	256
Active versus passive vision	257
Vision in old age	260
<hr/>	
<b>9 Attention and neglect</b>	<b>265</b>
Introduction	266
Moving attention	268
Spot the difference—change blindness	270
Objects and space	276
Visual search	281
Feature integration theory	284
Guided search	287
Neglect	291
<hr/>	
<b>10 The perception of faces</b>	<b>299</b>
The face as a special stimulus	300
Just how good are we at recognizing faces?	302
Feature configurations	305
Recognizing individuals	311
Caricatures	312
Expressions	314
Physiology of face recognition	318
Identity	318
Expressions	320
Prosopagnosia	322
Delusions	325
Conclusions	328

<b>11 Vision and action</b>	<b>332</b>
'What' and 'where' streams in vision	333
Blindsight	334
The superior colliculus route	337
Balint–Holmes syndrome or optic ataxia	340
Visual form agnosia	343
Dissociation of perception and action	345
Eye movements	347
Saccadic suppression	350
Eye movements in real tasks	351
Reading	351
Visual search	355
Doing 'real world' tasks	356
Conclusion	358
<b>12 How we know it might be so ...</b>	<b>361</b>
Anatomical techniques	362
Staining techniques	362
Recording techniques	364
Single-cell recording	364
Visually evoked potentials	369
Magnetoencephalography (MEG)	370
Functional magnetic resonance imaging (fMRI)	371
Optical imaging	375
Positron emission tomography (PET)	376
Microstimulation	377
Lesioning	377
Temporary lesions	379
Neuropsychology	381
Psychophysics	381
<b>Index</b>	<b>393</b>
