Contents

Contributors

1 Introduction

Alex Córdoba-Aguilar

Section I Studies in ecology

2 Mark-recapture studies and demography

Adolfo Cordero-Rivera and Robby Stoks

3 Structure and dynamics of odonate communities: accessing habitat, responding to risk, and enabling reproduction

Patrick W. Crumrine, Paul V. Switzer, and Philip H. Crowley

4 Life-history plasticity under time stress in damselfly larvae

Robby Stoks, Frank Johansson, and Marjan De Block

5 Ecological factors limiting the distributions and abundances of Odonata

Mark A. McPeck

6 Migration in Odonata: a case study of *Anax junius*

Michael L. May and John H. Matthews

7 The use of dragonflies in the assessment and monitoring of aquatic habitats

Beat Oertli

8 Dragonflies as focal organisms in contemporary conservation biology

Michael J. Samways

9 Valuing dragonflies as service providers

John P. Simaika and Michael J. Samways

Section II Studies in evolution

10 Evolution of morphological defences

Frank Johansson and Dirk Johannes Mikolajewski

11 Interspecific interactions and premating reproductive isolation

Katja Tynkkynen, Janne S. Kotiaho, and Erik I. Svendsen

12 Lifetime reproductive success and sexual selection theory

Walter D. Koenig
