

Contents

List of Tables and Figures	xi
Biography	xv
Chapter 1. Characteristics of Geographic Information	1
1.1 Geographic Information and Data	1
1.2 Categories of Data	2
1.3 Spatial Referencing	4
1.4 Lines and Shapes	7
Chapter 2. Numbers and Numerical Analysis	9
2.1 The Rules of Arithmetic	9
2.2 The Binary System	13
2.3 Square Roots	15
2.4 Indices and Logarithms	17
Chapter 3. Algebra — Treating Numbers as Symbols	23
3.1 The Theorem of Pythagoras	23
3.2 The Equations for Intersecting Lines	25
3.3 Points in Polygons	30
3.4 The Equation for a Plane	31
3.5 Further Algebraic Equations	31
3.6 Functions and Graphs	36
3.7 Interpolating Intermediate Values	38
Chapter 4. The Geometry of Common Shapes	43
4.1 Triangles and Circles	43
4.2 Areas of Triangles	46
4.3 Centers of a Triangle	49
4.4 Polygons	51
4.5 The Sphere and the Ellipse	53
4.6 Sections of a Cone	55
Chapter 5. Plane and Spherical Trigonometry	59
5.1 Basic Trigonometric Functions	59
5.2 Obtuse Angles	63
5.3 Combined Angles	65
5.4 Bearings and Distances	67
5.5 Angles on a Sphere	72

Chapter 6.	Differential and Integral Calculus	77
	6.1 The Basis of Differentiation	77
	6.2 Differentiating Trigonometric Functions	81
	6.3 Polynomial Functions	83
	6.4 Basic Integration	85
	6.5 Areas and Volumes	87
Chapter 7.	Matrices, Determinants, and Vectors	91
	7.1 Basic Matrix Operations	91
	7.2 Determinants	94
	7.3 Related Matrices	95
	7.4 Applying Matrices	98
	7.5 Rotations and Translations	99
	7.6 Simplifying Matrices	105
	7.7 Vectors	109
Chapter 8.	Curves and Surfaces	115
	8.1 Parametric Forms	115
	8.2 The Ellipse	119
	8.3 The Radius of Curvature	121
	8.4 Fitting Curves to Points	122
	8.5 The Bezier Curve	128
Chapter 9.	Transformations	131
	9.1 Homogeneous Coordinates	131
	9.2 Rotating an Object	132
	9.3 Hidden Lines and Surfaces	139
	9.4 Map Projections	140
	9.5 Cylindrical Projections	142
	9.6 Azimuthal Projections	145
	9.7 Conical Projections	147
Chapter 10.	Basic Statistics	153
	10.1 Probabilities	153
	10.2 Measures of Central Tendency	156
	10.3 The Normal Distribution	160
	10.4 Levels of Significance	163
	10.5 The t -Test	165
	10.6 Analysis of Variance	166
	10.7 The Chi-Squared Test	169
	10.8 The Poisson Distribution	170

Chapter 11. Best-Fit Solutions173

11.1 Correlation173

11.2 Regression176

11.3 Weights180

11.4 Linearization182

11.5 Least-Square Solutions184

Further Reading197

Index199

8.1 Data for Points on a Piece-wise Quadratic 125

8.2 Data for a Bezier Curve 139

9.1 Partial Areas Under the Normal Curve 163

9.2 Levels of Significance (P) for Values of t (Given 9 Degrees of Freedom) 166

10.3 Data Classified into Rows and Columns 168

11.1 Formulas for Calculating \bar{y} 174

11.2 Conditions to be Satisfied 184

11.3 The Normal Equations 186

11.4 Weighted Normal Equations 187

11.5 Observations and Conditions 188

11.6 Data and y to be Optimized 188

11.7 The Differentiated Equations 189

11.8 The Relationship between the Correlatives 189

11.9 The Equations for the Correlatives 190

11.10 Solving for the Correlatives 190

11.11 The Correlative Matrix 193

Figures

1 A scale bar 3

2 Rectangular Cartesian co-ordinates 4

3 Nonrectangular or skewed grid 5

4 Polar coordinates 5

5 Latitude and longitude 6

6 Lines of vectors 7

7 A line as a raster image 7

8 Topology 8

9 The distance from A to B 15

10 Rotating a triangle 24

11 Intersecting lines 25

12 The slope of a line 25

13 Parallel lines 28

14 Clipping to a window 28
