Preface	xi
Preface to the first edition	xiv
General symbols	xvii
1 Origins and classification of soils	1
1.1 Introduction: what is soil mechanics? 1	
1.2 The structure of the Earth 4	
1.3 The origin of soils 5	
1.4 Soil mineralogy 10	
1.5 Phase relationships for soils 16	
1.6 Unit weight 19	
1.7 Effective stress 24	
1.8 Particle size distributions 29	
1.9 Soil filters 36	
1.10 Soil description 40	
1.11 Index tests and classification of clay soils 40	
1.12 Compaction 44	
1.13 Houses built on clay 51	
1.14 Site investigation 56	
Key points 61	
Questions 61	
Notes 64	
References 65	
2 Soil strength	67
2.1 Introduction and objectives 67	
2.2 Stress analysis 68	
2.3 Soil strength 76	
2.4 Friction 77	
2.5 The shearbox or direct shear apparatus 80	
2.6 Presentation of shearbox test data in engineering units 82	

- 2.7 *Volume changes during shear* 84
- 2.8 *Critical states* 86
- 2.9 *Peak strengths and dilatancy* 90
- 2.10 *Shearbox tests on clays* 96
- 2.11 *Applications* 99
- 2.12 *Stress states in the shearbox test* 102
- 2.13 *The simple shear apparatus* 107
 - Key points* 114
 - Questions* 115
 - Note* 119
 - References* 119

3 Groundwater, permeability and seepage 120

- 3.1 *Introduction and objectives* 120
- 3.2 *Pore water pressures in the ground* 122
- 3.3 *Darcy's Law and soil permeability* 126
- 3.4 *Laboratory measurement of permeability* 131
- 3.5 *Field measurement of permeability* 136
- 3.6 *Permeability of laminated soils* 140
- 3.7 *Mathematics of groundwater flow* 144
- 3.8 *Plane flow* 145
- 3.9 *Confined flownets* 147
- 3.10 *Calculation of pore water pressures using flownets* 155
- 3.11 *Quicksand* 156
- 3.12 *Unconfined flownets* 158
- 3.13 *Distance of influence* 161
- 3.14 *Soils with anisotropic permeability* 161
- 3.15 *Zones of different permeability* 165
- 3.16 *Boundary conditions for flow into drains* 166
- 3.17 *Application of well pumping formulae to construction dewatering* 169
- 3.18 *Numerical methods* 171
- 3.19 *Wells and pumping methods* 174
 - Key points* 178
 - Questions* 179
 - Notes* 186
 - References* 186

4 One-dimensional compression and consolidation 188

- 4.1 *Introduction and objectives* 188
- 4.2 *One-dimensional compression: the oedometer test* 190

4.3	<i>One-dimensional consolidation</i>	200
4.4	<i>Properties of isochrones</i>	203
4.5	<i>One-dimensional consolidation: solution using parabolic isochrones</i>	204
4.6	<i>Determining the consolidation coefficient c_v from oedometer test data</i>	208
4.7	<i>Application of consolidation testing and theory to field problems</i>	211
4.8	<i>One-dimensional consolidation: exact solutions</i>	228
4.9	<i>Radial drainage</i>	239
4.10	<i>Limitations of the simple models for the behaviour of soils in one-dimensional compression and consolidation</i>	241
	Key points	244
	Questions	245
	Notes	251
	References	251
5	The triaxial test and soil behaviour	253
5.1	<i>Objectives</i>	253
5.2	<i>The triaxial test</i>	254
5.3	<i>Stress parameters</i>	257
5.4	<i>Stress analysis of the triaxial test</i>	261
5.5	<i>Determining the effective angle of shearing resistance ϕ' from triaxial shear tests</i>	268
5.6	<i>Undrained shear strengths of clay soils</i>	274
5.7	<i>Isotropic compression and swelling</i>	278
5.8	<i>Sample preparation by one-dimensional compression and swelling: K_0 consolidation</i>	279
5.9	<i>Conditions imposed in shear tests</i>	280
5.10	<i>Critical states</i>	281
5.11	<i>Yield</i>	284
5.12	<i>State paths during shear: normally consolidated and lightly overconsolidated clays</i>	293
5.13	<i>Peak strengths</i>	304
5.14	<i>Residual strength</i>	308
5.15	<i>Sensitive soils</i>	309
5.16	<i>Correlation of critical state parameters with index tests</i>	310
5.17	<i>Creep</i>	312
5.18	<i>Anisotropy</i>	313
5.19	<i>Partly saturated soils</i>	315
5.20	<i>The critical state model applied to sands</i>	316
5.21	<i>Non-linear soil models</i>	318

Key points	319	
Questions	321	
Notes	326	
References	326	
6 Calculation of soil settlements using elasticity methods		329
6.1 Introduction	329	
6.2 Selection of elastic parameters	331	
6.3 Boussinesq's solution	336	
6.4 Estimation of increases in vertical stress at any depth due to any pattern of surface load, using Newmark's chart	338	
6.5 Estimation of settlements due to surface loads and foundations	343	
6.6 Influence factors for stresses	347	
6.7 Standard solutions for surface settlements on an isotropic, homogeneous, elastic half-space	352	
6.8 Estimation of immediate settlements	353	
6.9 Effect of heterogeneity	353	
6.10 Cross-coupling of shear and volumetric effects due to anisotropy	354	
Key points	355	
Questions	356	
Note	360	
References	360	
7 The application of plasticity and limit equilibrium methods to retaining walls		362
7.1 Engineering plasticity	362	
7.2 Upper and lower bounds (safe and unsafe solutions)	364	
7.3 Failure criteria for soils	365	
7.4 Retaining walls	370	
7.5 Calculation of limiting lateral earth pressures	375	
7.6 Development of simple stress field solutions for a propped embedded cantilever retaining wall	379	
7.7 Mechanism-based kinematic and equilibrium solutions for gravity retaining walls	390	
7.8 Limit equilibrium stress distributions for embedded retaining walls	416	
7.9 Soil/wall friction	420	
7.10 Earth pressure coefficients taking account of shear stresses at the soil/wall interface	421	
Key points	426	

Questions	428	
Notes	433	
References	433	
8 Foundations and slopes		436
8.1	<i>Introduction and objectives</i>	436
8.2	<i>Shallow strip foundations (footings): simple lower bound (safe) solutions</i>	437
8.3	<i>Simple upper bound (unsafe) solutions for shallow strip footings</i>	439
8.4	<i>Bearing capacity enhancement factors to account for foundation shape and depth, and soil weight</i>	445
8.5	<i>Shallow foundations subjected to horizontal and moment loads</i>	449
8.6	<i>Simple piled foundations: ultimate axial loads of single piles</i>	458
8.7	ϕ'_{crit} or ϕ'_{peak} ?	460
8.8	<i>Pile groups and piled rafts</i>	468
8.9	<i>Lateral loads on piles</i>	470
8.10	<i>Introductory slope stability: the infinite slope</i>	474
8.11	<i>Analysis of a more general slope</i>	479
	Key points	490
	Questions	491
	Notes	495
	References	495
9 Calculation of bearing capacity factors and earth pressure coefficients for more difficult cases, using plasticity methods		497
9.1	<i>Introduction and objectives</i>	497
9.2	<i>Stress discontinuities: ϕ' analysis</i>	499
9.3	<i>Stress discontinuities: τ_u analysis</i>	501
9.4	<i>Application to stress analysis</i>	502
9.5	<i>Shallow foundations</i>	504
9.6	<i>Calculation of earth pressure coefficients for rough retaining walls</i>	516
9.7	<i>Sloping backfill</i>	525
9.8	<i>A wall with a sloping (battered) back</i>	528
9.9	<i>Improved upper bounds for shallow foundations</i>	533
	Key points	541
	Questions	542
	Note	543
	References	544

10	Particular types of earth retaining structure	545
10.1	<i>Introduction and objectives</i>	545
10.2	<i>Design calculations for embedded retaining walls: ultimate limit states</i>	546
10.3	<i>Calculation of bending moments and prop loads: serviceability limit states</i>	551
10.4	<i>Embedded walls retaining clay soils</i>	553
10.5	<i>Geostructural mechanism to estimate wall movements</i>	563
10.6	<i>Effect of relative soil: wall stiffness</i>	566
10.7	<i>Compaction stresses behind backfilled walls</i>	577
10.8	<i>Strip loads</i>	583
10.9	<i>Multi-propped embedded walls</i>	584
10.10	<i>Reinforced soil walls</i>	585
10.11	<i>Tunnels</i>	588
	Key points	598
	Questions	599
	Note	602
	References	603
11	Modelling, <i>in situ</i> testing and ground improvement	605
11.1	<i>Introduction and objectives</i>	605
11.2	<i>Modelling</i>	606
11.3	<i>In situ testing</i>	620
11.4	<i>Ground improvement techniques</i>	645
	Key points	658
	Questions	659
	Notes	661
	References	661
	<i>Index</i>	667
