Introduction	1
Aim of this book	2
Examples	2
How to get the most from this book	2
Use the symbols	3
1 What is evidence-based practice?	4
Have clear reasons for your practice decisions and your care	4
Defining evidence-based practice	7
Exploring the components of evidence-based practice	9
What are the consequences of not taking an evidence-based approach?	14
What does evidence-based practice mean to me?	18
In summary	20
Key points	20
2 Where did evidence-based practice come from?	21
Moving from tradition and ritual towards an evidence-based approach	22
The developing research culture	23
The on-going information revolution	25
Why is there so much information available?	26
So how does this 'information revolution' affect me?	28
In summary	29
Key points	29
3 Using evidence in your decision making and to answer practical questions	30
Evidence and decision making	31
The consequences and implications of your decision	32
What types of evidence do we need to make different decisions?	34
What kind of evidence is available?	38

Finding the right type of research evidence for your decision or question	40
Research that is directly applicable or highly relevant	42
Research that has not been conducted in your particular setting or with your patient or client group	43
What other 'evidence' is there out there?	46
In summary	47
Key points	48
4 What are the different types of research and how do they help us answer different questions?	49
How do I recognize research?	50
Systematic reviews and good quality literature reviews	51
Quantitative research	57
Experimental and non-experimental quantitative research	59
Qualitative studies	72
Different approaches to qualitative research	74
Which type of research is best?	77
What does the term 'hierarchy of evidence' mean?	78
What about using secondary sources?	81
Use of policy and guidelines	82
Non-research-based evidence	84
In summary	84
Key points	85
5 How do I find relevant evidence to support my practice and learning?	86
Focussing the topic and refining the question	87
Focussing and structuring your question using PICOT (or PICO)	88
Searching for relevant evidence	90
The importance of a comprehensive approach to searching for literature	90
How to develop an effective search strategy	92
In summary	107
Key points	108
6 How do I know if the evidence is convincing and useful?	109
What is critical appraisal?	110
The importance of critical appraisal	111
Defining the terms used in judging the quality of research	111

Getting started with critical appraisal	112
Getting to know your literature	117
General critical appraisal tools	119
Specific critical appraisal tools	123
Key questions to ask when reviewing different types of evidence	124
Key questions to ask of review articles and good quality literature reviews	125
Key questions to ask of quantitative studies	126
Key questions to ask of qualitative studies	131
Key questions to ask of professional and clinical guidance and policy	136
Key questions to ask of discussion or opinion articles (anecdotal evidence)	137
Key questions to ask of websites	138
Incorporating critical appraisal into your academic writing or when debating use of evidence in practice	139
In summary	140
Key points	141
7 How to implement evidence-based practice	142
Background and overview of 'getting more evidence into practice'	143
The motivation, knowledge and skills needed by the individual	145
Organizational motivation, learning and infrastructure	148
Finding solutions to the problems of implementing EBP	152
Challenging the practice of ourselves and others	157
The future of evidence-based practice	159
In summary	159
Key points	160
<i>Glossary</i>	161
<i>References</i>	167
<i>Appendix: Useful websites</i>	174
<i>Index</i>	181
