Contents

Chapter 1

Introduction 1
1.1 Goals of this Book 1
1.2 Current Status of Resources 2
1.2.1 Ozone Hole 2
1.2.2 Water-Borne Soil Erosion 3
1.2.3 Loss of Biodiversity 5
1.3 Impact of Resource Degradation 7
1.4 Nature of Resource Degradation 10
1.5 Nature of Resource Management 12
1.5.1 Strategic Management 12
1.5.2 Process or Regional Management 13
1.5.3 Operational Management 15
1.5.4 Relationship between These Levels of Management 15
1.6 Nature of Regional Resource Management Information Systems 16
1.7 Geographic Information in Resource Management 20
1.8 Structure of this Book 24
Reference 25

Chapter 2

Physical Principles of Remote Sensing 27
2.1 Introduction 27
2.2 Electromagnetic Radiation 31
2.2.1 Nature of Electromagnetic Radiation 31
2.2.2 Radiometric Terms and Definitions 34
2.2.3 Energy Radiated by the Sun and the Earth 35
2.2.4 Effects of the Atmosphere 36
2.2.5 Correction of Remotely Sensed Data for Attenuation through the Atmosphere 40
2.2.5.1 Atmospheric Correction Using Field Data 42
2.2.5.2 Atmospheric Correction Using Numerical Atmospheric Models 43
2.2.6 Measurement of Radiance and Irradiance 44
2.2.6.1 Collecting Optics 45
2.2.6.2 Filter Unit 45
2.2.6.3 Detectors 46
2.2.6.4 Output Device 47
2.3 Interaction of Radiation with Matter 48
2.3.1 Nature of Reflectance 48
2.3.1.1 Reflectance within the Boundary Layer 49
2.3.2 Reflectance of Water Surfaces 54
2.3.3 Reflectance Characteristics of Soils 55

2.3.4 Reflectance of Vegetation 58
2.3.5 Reflectance Characteristics of Green Leaves 62
2.3.6 Reflectance Characteristics of Dead Leaves 66
2.3.7 Vegetative Canopy Reflectance 66
2.3.8 Bi-Directional Reflectance Distribution Function of Surfaces 71
2.4 Passive Sensing Systems 72
2.4.1 The Camera 74
2.4.1.1 Lens Cone 74
2.4.1.2 Magazine or Digital Back 75
2.4.1.3 Camera Body 76
2.4.1.4 Suspension Mount 76
2.4.1.5 Light Sensitive Cell Arrays 81
2.4.1.6 Measurement of Resolution in Image Data 81
2.4.2 Acquisition of Aerial Photography with a Framing Camera 84
2.4.2.1 Effects of Height Differences on an Aerial Photograph 87
2.4.2.2 Types of Lens Cones 88
2.4.3 The Scanner 89
2.4.4 The Moving Mirror Scanner 89
2.4.4.1 Resolution of Scanner Data 91
2.4.4.2 Thermal Scanner Data 92
2.4.4.3 Sources of Error in Oscillating Mirror Scanner Imagery 92
2.4.5 Pushbroom Scanners 96
2.5 Active Sensing Systems 97
2.5.1 Introduction 97
2.5.2 The Geometry of Radar Systems 98
2.5.2.1 Resolution of Radar Data 99
2.5.2.2 Effect of Height Displacements 101
2.5.3 The Attenuation and Scattering of Radar in the Atmosphere 102
2.5.4 The Information Content of Radar Imagery 102
2.5.4.1 Surface Roughness and Slope 103
2.5.4.2 Inhomogeneity 106
2.5.4.3 Dielectric Properties 107
2.5.4.4 Resonance-Sized Objects 108
2.5.4.5 Wavelength 108
2.5.4.6 Polarisation 108
2.5.5 Radar Interferometry 109
2.5.6 Summary 111
2.6 Hyperspectral Image Data 111
2.6.1 Definition 111
2.6.2 Applications of Hyperspectral Image Data 112
2.7 Hypertemporal Image Data 112
2.7.1 Introduction 112
2.8 Platforms 113
2.8.1 Terrestrial Platforms 113
2.8.2 Balloon 114
2.8.3 Helicopter or Boat 114
2.8.4 Manned and Unmanned Aircraft 114
2.8.4.1 Hot Spots 116
2.8.5 Planning an Aerial Sortie 116
2.8.6 Satellite Platform 117
2.9 Satellite Sensor Systems 119

Additional Reading 119
References 120

Chapter 3
Visual Interpretation and Map Reading 123
3.1 Overview 123
3.1.1 Remotely Sensed Data and Visual Interpretation 123
3.1.2 Effects of Height Differences on Remotely Sensed Images 124
3.2 Stereoscopy 124
3.2.1 Introduction 124
3.2.2 Monocular Vision 125
3.2.3 Binocular Vision 126
3.2.4 Binocular Perception of Colour 128
3.2.5 General Principles of Stereoscopic Vision 129
3.2.6 Methods of Stereoscopic Viewing 130
3.2.7 Physical Methods of Separation Using Stereoscopes 130
3.2.8 Viewing with a Stereoscope 131
3.2.9 Optical Methods of Separation 132
3.2.9.1 Coloured Anaglyph 132
3.2.9.2 Polarising Filters 133
3.2.10 Construction of a Stereo-Triplet 133
3.3 Measuring Height Differences in a Stereoscopic Pair of Photographs 134
3.3.1 Principle of the Floating Mark 134
3.3.2 Parallax Bar 135
3.3.3 Vertical Exaggeration 135
3.3.4 Displacements due to Height Differences in an Aerial Photograph 135
3.3.5 Derivation of the Parallax Bar Formulae 136
3.3.6 Characteristics of the Parallax Bar Equation 138
3.4 Planimetric Measurements on Aerial Photographs 139
3.4.1 Introduction 139
3.4.2 Determination of Scale 139
3.4.3 Measurement of Distances 140
3.4.3.1 Graduated Rule or Scale 140
3.4.3.2 Paper Strip 140
3.4.3.3 Length of String 140
3.4.3.4 Odometer 140
3.4.4 Measurement of Areas 141
3.4.4.1 Dot Grid 141
3.4.4.2 Digitiser 141
3.4.5 Transfer of Planimetric Detail by the Use of the Anharmonic Ratio 141
3.4.5.1 Paper Strip Method 142
3.4.5.2 Projective Nets 142
3.4.6 Proportional Dividers 143
3.5 Perception of Colour 144
3.6 Principles of Photographic Interpretation 146
3.6.1 Introduction 146
3.6.2 Levels of Interpretation 147
3.6.2.1 Image Reading 147
3.6.2.2 Image Analysis 147
3.6.2.3 Image Interpretation 147

3.6.3 Principles of Object Recognition 148
3.6.3.1 Size 148
3.6.3.2 Shape 148
3.6.3.3 Shadow 148
3.6.3.4 Colour or Tone 149
3.6.3.5 Pattern and Texture 150
3.6.4 Interpretation Strategies 150
3.6.4.1 Location and Association 150
3.6.4.2 Temporal Change 150
3.6.4.3 Convergence of Evidence 151
3.6.5 Interpretation Procedure 151
3.7 Visual Interpretation of Images 152
3.7.1 Visual Interpretation of Thermal Image Data 154
3.7.2 Visual Interpretation of Radar Image Data 155
3.8 Maps and Map Reading 157
3.8.1 Map Projections 157
3.8.1.1 Definition of the Mathematical Shape of the Portion of the Earth ... 157
3.8.1.2 Specify How the Curved Surface of the Earth is to be Unfolded onto a Flat Sheet 158
3.8.2 Mapping Systems and Map Types 163
3.8.3 Map Co-ordinates and Bearings 165
3.8.4 Establishing One's Location on a Map 167
3.8.5 Map Reading on a Topographic Map 168
3.8.6 Terrain Classification 170
Further Reading 171
References 171

Chapter 4
Image Processing 173
4.1 Overview 173
4.1.1 Pre-Processing 174
4.1.2 Enhancement 175
4.1.3 Classification 175
4.1.4 Estimation 176
4.1.5 Temporal Analysis 177
4.2 Statistical Considerations 179
4.2.1 Probability Density Functions 180
4.2.1.1 Binomial Distribution 182
4.2.1.2 Normal Distribution 182
4.2.2 Correlation 183
4.2.3 Statistical Characteristics of Satellite Scanner Data 185
4.2.4 Measures of Distance 189
4.2.5 Shannon's Sampling Theorem 190
4.2.6 Autocorrelation and Variograms 191
4.2.7 Frequency Domain 193
4.2.7.1 Scaling 196
4.2.7.2 Shifting 196
4.2.7.3 Convolution 196
4.2.8 Least Squares Method of Fitting 196
4.3 Pre-Processing of Image Data 201
4.3.1 Introduction 201

4.3.2 Rectification 203
4.3.2.1 Theoretical Basis for Rectification 203
4.3.2.2 Correction for Systematic Errors 204
4.3.2.3 Fitting Image Data to Ground Control 206
4.3.2.4 Resampling the Image Data 209
4.3.2.5 Windowing and Mosaicing 212
4.3.2.6 Rectification in Practice 213
4.3.3 Radiometric Calibration 215
4.3.4 Atmospheric Correction 216
4.3.4.1 Use of a Linear Model for Atmospheric Correction 218
4.3.4.2 Atmospheric Correction Using Atmospheric Models 220
4.4 The Enhancement of Image Data 221
4.4.1 Radiometric Enhancement 221
4.4.1.1 Display of an Image 222
4.4.1.2 Pseudo-Colour Density Slice 223
4.4.1.3 Linear Enhancement 224
4.4.1.4 Non-Linear Enhancements 226
4.4.1.5 Piecewise Linear Stretch 227
4.4.1.6 Histogram Equalisation 228
4.4.2 Spectral Enhancements 228
4.4.2.1 Ratioing 229
4.4.2.2 Orthogonal Transformations 230
4.4.2.3 Vegetation Indices 233
4.4.2.4 Fourier Transformation 236
4.4.3 Spatial Transformations of Image Data 238
4.4.3.1 Measurement of Texture 239
4.4.3.2 Edge Detection 242
4.4.3.3 Removal of Regular Noise in Image Data 246
4.4.3.4 Analysis of Spatial Correlation: The Variogram 247
4.4.3.5 Image Segmentation 249
4.4.3.6 Object Patterns and Object Sizes: The ALV Function 252
4.4.4 Temporal Enhancements 255
4.4.4.1 Temporal Enhancement 256
4.4.4.2 Principal Components 256
4.4.4.3 Temporal Distance Images 256
4.4.4.4 Fourier Analysis of Hypertemporal Data 257
4.5 Analysis of Mixtures or End Member Analysis 258
4.5.1 Linear End Member Model 259
4.5.2 Characteristics of the Linear End Member Model 263
4.5.3 Identification of End Members 264
4.5.4 Implementation of the Linear End Member Algorithm 265
4.6 Image Classification 265
4.6.1 Principles of Classification 265
4.6.2 Discriminant Function Classifiers 270
4.6.2.1 Development of the Maximum Likelihood Classifier 271
4.6.2.2 Summary 275
4.6.2.3 Characteristics of the Discriminant Function Family of Classifiers 275
4.6.2.4 Implementation of the Maximum Likelihood Classifier 276
4.6.3 Fuzzy Classifiers 277
4.6.4 Neural Network Classifiers 278

4.6.5 Hierarchical Classifiers 281
4.6.6 Classification Strategies 282
4.6.6.1 Types of Classes 283
4.6.6.2 Selecting Classes and Classifiers 283
4.6.6.3 Improving Interclass Discriminability 284
4.6.6.4 Cost Minimisation 285
4.6.6.5 Field Data in Classification 286
4.6.6.6 Use of Different Classification Strategies 286
4.7 Clustering 288
4.7.1 Clustering Criteria 288
4.7.1.1 Minimisation of the Variance 288
4.7.1.2 Maximise the Divergence 290
4.7.2 Clustering of Training Data 290
4.7.3 Strategies for Clustering 290
4.7.3.1 Reduction of the Cluster Distributions 290
4.7.3.2 Increase of the Between-Cluster Distances 291
4.8 Estimation 291
4.8.1 Introduction 291
4.8.2 Development of Regression Estimation Models 292
4.8.3 Application of Regression Estimation Models 292
4.8.4 Development of Interpolation Estimation Models 294
4.8.5 Estimation Based on Physical Models 295
4.9 Analysis of Hyper-Spectral Image Data 296
4.9.1 Introduction 296
4.9.2 Vegetation Mapping 296
4.9.3 Fitting of Spectra 297
4.10 Analysis of Dynamic Processes 297
4.10.1 Introduction 297
4.10.2 Time Series Analysis of Image Data 299
4.10.2.1 Removal of the Seasonality 299
4.10.2.2 Analysis 301
4.10.3 Comparison of Two Time Series 303
4.10.4 Analysis of Spatio-Temporal Dynamic Processes 305
4.11 Summary 305
Further Reading 307
References 307

Chapter 5
Use of Field Data 309
5.1 The Purpose of Field Data 309
5.1.1 Definition and Description of Field Data 309
5.1.2 Role and Types of Field Data 310
5.1.3 Accuracy and Reliability 313
5.2 Collection of Field Spectral Data 315
5.2.1 Purpose of Collecting Field Spectral Data 315
5.2.2 Measurement of Field Spectral Data 315
5.2.2.1 Method 1: The Direct Measurement of Reflectance 316
5.2.2.2 Measurement of Reflectance Factors 318
5.2.3 Considerations in Collecting Field Spectral Data 320
5.2.3.1 Need for Representative Data 320
5.2.3.2 Need for Lambertian Control Surfaces 320

5.2.3.3 Effect of Non-Lambertian Surfaces on Reflectance 320
5.2.3.4 Impact of Clouds on Measurement of Reflectance 321
5.2.4 Collection of Other Data With Spectral Data 322
5.2.4.1 Ability of Spectral Data to Estimate Selected Physical Parameters 322
5.2.4.2 Need for Representative Physical and Spectral Data 322
5.2.4.3 Impact of Variations in Canopy Reflectance on Derived Models 325
5.2.4.4 Implementation of Models in Airborne and Space Borne Systems 326
5.2.5 Construction of Models from a Set of Related Spectral and Field Data 326
5.3 Use of Field Data in Visual Interpretation 330
5.3.1 Identification 330
5.3.2 Interpretation 331
5.3.2.1 *CLASS A* Errors or Errors of Non-Identification 332
5.3.2.2 *CLASS B* Errors or Errors of Mis-Identification 332
5.3.2.3 *CLASS C* Errors or Errors of Mis-Interpretation 332
5.3.2.4 *CLASS D* Errors or Errors of Non-Interpretation 332
5.4 Use of Field Data in the Classification of Digital Image Data 333
5.4.1 Classification with the Normal Classifiers 333
5.4.1.1 Classification Then Verification 333
5.4.1.2 Field Data Collection Then Classification 334
5.4.2 Classification Using the Mixture Model 335
5.4.2.1 Verify That the Class Data Occupy a Linear Domain 335
5.4.2.2 Assist in Defining Node Response Values 335
5.5 Stratified Random Sampling Method 335
5.5.1 Delineation of Strata 336
5.5.2 Determination of the Sampling Fraction and the Number of Samples 336
5.5.3 Selection of Samples 342
5.5.4 Measurement of Samples 344
5.6 Accuracy Assessment 345
5.6.1 Role of Accuracy Assessment 345
5.6.1.1 Relevance 346
5.6.1.2 Representative of the Population 346
5.6.1.3 Easily Understood and Usable 346
5.6.1.4 Can be Related to Other Information 346
5.6.2 Comparison of Field Data with Classification Results 347
5.6.2.1 Classification Accuracy 347
5.6.2.2 Accuracy of Identifying Production Units 352
5.6.2.3 Boundary and Area Accuracy Assessment 353
5.6.3 Use of Field Data in Estimation 353
5.7 Summary 353
Further Reading 354
References 354

Chapter 6
Geographic Information Systems 355
6.1 Introduction to Geographic Information Systems 355
6.2 Data Input 360
6.2.1 Databases and Attribute Data 360

6.2.2 Creation of Spatial GIS Layers by Digitising from an Existing Map or Image 363
6.2.2.1 Manual Digitising on a Viewing Screen 365
6.2.2.2 Manual Digitising by Use of a Tablet or Table 366
6.2.2.3 Scan Digitising 369
6.2.3 Field Collected Data and Observations 370
6.2.4 Information from Image Data 372
6.2.4.1 Quadtree Data Structures 373
6.2.4.2 Run Length Encoding 373
6.3 Simple Raster Data Analysis in a GIS 373
6.3.1 Displaying Data 374
6.3.1.1 Name of the Layer 374
6.3.1.2 Type of Data to be Displayed 374
6.3.1.3 Colour Table to be Used 375
6.3.1.4 Scale of the Display and/or the Portion of the Whole Layer That is to be Displayed 376
6.3.2 Overlaying Layers of Data on the Screen 376
6.3.3 Combining Layers, Numerically and Logically 377
6.3.4 Filtering and Neighbourhood Analyses 381
6.3.5 Distances, Cost Surfaces, Least Cost Pathways and Contextual Analysis 383
6.3.5.1 Least Cost Pathways 385
6.3.5.2 Context Operators 385
6.3.6 Statistical Analysis 386
6.4 Vector GIS Data Analysis Functions (Susanne Kickner) 388
6.4.1 Selection 388
6.4.1.1 Selecting by Attribute 389
6.4.1.2 Selecting by Location 391
6.4.2 Dividing and Joining Areas 394
6.4.3 Types of Spatial Overlay 395
6.4.3.1 Intersection 396
6.4.3.2 Union 397
6.4.3.3 Identity 397
6.4.3.4 Erase 397
6.4.3.5 Update 398
6.4.3.6 Clip 399
6.4.4 Proximity Analysis 399
6.4.4.1 Near 400
6.4.4.2 Buffer Creation 400
6.5 Data Management in a GIS 400
6.6 Advanced Analysis Techniques in a Vector GIS — Network Modelling (Susanne Kickner) 403
6.6.1 Topology in a Network 404
6.6.2 Address Geocoding 405
6.6.3 Path Finding in Vector GIS 405
6.6.4 Location–Allocation 407
6.6.5 Gravity Models 408
6.7 Advanced Raster Analysis Techniques in a GIS 409
6.7.1 Geostatistics 409
6.7.2 Map Algebra and Script Languages 410
6.7.2.1 Compute an NDVI Image 413
6.7.2.2 Compute an FPAR Image 413

6.7.3 Surface Analysis ... 414
6.7.3.1 Linear Interpolation Using Triangulated Irregular Networks ... 415
6.7.3.2 Curve Fitting ... 417
6.7.3.3 Kriging ... 418
6.7.4 Analyses of Cross-Tabulation Tables ... 425
6.7.5 Clump Analysis ... 426
6.7.6 Zonal Analysis ... 426
6.8 Modelling in a GIS ... 426
6.8.1 What is Modelling? ... 426
6.8.1.1 Cellular Automata ... 430
6.8.1.2 Agent-Based Models ... 430
6.8.2 Modifiable Areal Unit Problem ... 432
6.8.3 Measures of Global and Local Homogeneity/Heterogeneity ... 435
6.8.4 An Example of a "Top-Down," Regression Based Model — The Universal Soil Loss Equation ... 435
6.8.5 Modelling of Ecological Systems ... 441
6.9 Uncertainty in GIS Analysis ... 443
6.9.1 Errors within a Layer and Error Statements ... 444
6.9.2 Propagation of Error in Combining Layers ... 446
6.9.2.1 Propagation of Error in Numerical Analysis ... 446
6.9.2.2 Propagation of Error in Logical Operations ... 448
6.9.3 Sensitivity Analyses ... 449
6.9.4 Decision Making under Uncertainty ... 450
6.9.4.1 Bayes ... 451
6.9.4.2 Dempster–Shafer ... 451
6.10 Presentation in a GIS ... 451
6.11 Three-Dimensional GIS ... 453
Additional Reading ... 453
References ... 454

Chapter 7
The Analysis and Interpretation of Vegetation ... 455
7.1 Introduction ... 455
7.1.1 Energy Budget ... 456
7.1.2 Hydrologic Cycle ... 458
7.1.3 Carbon Cycle ... 458
7.1.4 Nutrient Budgets ... 459
7.2 Regional Vegetation Mapping and Monitoring ... 463
7.2.1 Landcover ... 464
7.2.2 Estimation ... 465
7.3 Signatures of Vegetation ... 465
7.3.1 Spectral Signatures (λ) ... 466
7.3.2 Spatial Signatures (x, y, z) ... 467
7.3.3 Temporal Signatures (t) ... 467
7.3.4 Angular Signatures ... 469
7.3.5 Polarisation Signatures ... 469
7.4 Modelling Canopy Reflectance ... 470
7.4.1 Introduction ... 470
7.4.2 Leaf Reflectance Models ... 475
7.4.2.1 Plate Models ... 475
7.4.2.2 Ray Tracing Models ... 479

7.4.3 Canopy Reflectance Models 480
7.4.4 Empirical Models 481
7.4.5 Turbid Medium Models 481
7.4.5.1 Theoretical Basis for These Models 481
7.4.5.2 Suits Model 486
7.4.6 Geometric-Optic (GO) Models 491
7.4.7 Ray Tracing Models 492
7.4.8 Radiosity or Computer Graphics Based Models 493
7.4.9 Linear Semi-Empirical Approximations to the Physical Models 493
7.5 Estimation of Vegetation Parameters and Status 497
7.5.1 Introduction 497
7.5.2 Regression Models 498
7.5.3 Empirical Interpolation 500
7.5.4 Inversion of Canopy Reflectance Models 500
7.5.4.1 Linearisation for Least Squares 502
7.5.4.2 Levenberg–Marquandt (L–M) Method of Solution 503
7.5.5 Estimation Based on Linear Approximations to the CR Models 505
7.6 Classification of Vegetation 505
7.6.1 Incorporation of Environmental Knowledge into the Classification Process 507
7.6.2 Incorporation of Environmental Data into the Classification Process 508
7.7 Analysis of Vegetation Phenology 509
7.7.1 Germination 510
7.7.2 Seedling Stage 510
7.7.3 Tillering 510
7.7.4 Stem Elongation 510
7.7.5 Booting Stage 510
7.7.6 Heading Stage 510
7.7.7 Flowering or Anthesis Stage 511
7.7.8 Milk Stage 511
7.7.9 Dough Development Stage 512
7.7.10 Ripening Stage 512
7.8 Concluding Remarks 517
Additional Reading 518

Chapter 8
The Management of Spatial Resources and Decision Support 521
8.1 Introduction 521
8.2 Nature of Management of Rural Physical Resources 523
8.2.1 Introduction 523
8.2.2 Levels of Management 523
8.2.2.1 Strategic Management 523
8.2.2.2 Regional 524
8.2.2.3 Operational 525
8.2.3 Role of Remote Sensing and GIS in Resource Management 527
8.2.3.1 Strategic Management 527
8.2.3.2 Regional Management 527
8.2.3.3 Operational Management 528
8.3 Process of Decision Making in Resource Management 529
8.3.1 Selecting an Appropriate Model of Events 529
8.3.2 Parameterise the Model 529

8.3.3 Identify Decision Choices 530
8.3.4 Making the Choice 530
8.3.5 Types of Models and Decisions 530
8.4 Decision Support Systems and Their Role in Decision Making 531
8.4.1 Definitions 533
8.4.2 Multi-Criteria Evaluation 535
8.4.3 Multi-Objective Evaluation 539
8.4.3.1 Legal Issues in the Use of Data and Information 540
8.4.4 Use of Data Supplied by a Third Party for Use by the Analyst 541
8.4.4.1 Copyright 542
8.4.4.2 Legal Protection of Databases 542
8.4.4.3 Patents 543
8.4.5 Protection of Confidentiality of Data about Third Parties 543
8.4.6 Use of Information Derived from the Analysis of Data 544
8.5 Other Project Management Tools 546
8.6 Concluding Remarks 546
