Acknowledgments XV

Preface xvii

GIS Tutorial 1 Introduction

Launch ArcMap 2

Open an existing map 3

Map layers 4

Turn a layer on 4

Turn a layer off 4

Add a layer 5

Change a layer's display order 6

Change a layer's color 7

Change a layer's outline color 8

Zoom and pan 9

Zoom In 9

Fixed Zoom In 9

Zoom Out 10

Fixed Zoom Out 10

Pan 10

Zoom to Full Extent 10

Zoom to the Previous Extent 11

Zoom to the Next Extent 11

Magnifier window 12

Opening the magnifier 12

Magnifier properties 13

Overview window 14

Opening the Overview window 14

Spatial bookmarks 16

Measure distances 17

Measure the horizontal distance of Colorado 17

Change distance measurements 18

Identify features 19

Identify various U.S. states 19

Identify various U.S. cities 20

Restricting Identify Results 21

Selecting features 22

Select button 22

Selecting multiple features 22

Clearing selected features 23

Selection Color 23

Changing selection symbol 24

Selectable layers 25

Find features 26

Work with feature attribute tables 28

Open the table of the US Cities layer 28

Show the connection between layers and tables 29

Show only selected records 29

Clear selections 30

Select more than one record from the table 30

Zoom to selected feature 31

Switch selections 31

Clear selections 32

Sort a field 32

Move a field 33

Label features on the map 34

Set label properties 34

Label features 34

Remove labels 35

Convert labels for selected features to annotation 35

Relative paths and saving maps 37

Absolute path names 37

Relative path names 37

Saving layers as relative path names 37

Save the project and exit ArcMap 38

Exercise Assignment 1-1 Statistics on U.S. housing 39

Exercise Assignment 1-2 Erin Street crime watch 40

GIS Tutorial 2 Map Design 43

Launch ArcMap 44

Create choropleth maps 45

Add a layer to the view 45

Change a layer's name 46

Select a census attribute to display state population 47

Create group layers 48

Add a group layer to the map 48

Add a layer to the group 49

Change the symbology for states 50

Select a census attribute to display county population 51

Saving layer files 53

Adding group layers 53

Removing group layers 53

Create threshold scales for dynamic display 54

Set a visible scale based on the current scale 54

Set a maximum scale based on the current scale 55

Clear a layer's visible scale 56

Set a minimum visible scale for a specific layer 57

Set a maximum visible scale for a specific layer 58

Create choropleth maps using custom attribute scales 59

Create custom classes in a legend 59

Manually change class values 60

Manually change class colors and hues 62

Pin (point) maps 63

Create a pin map of U.S. cities by population 63

Create a pin map based on feature query 65

Create a new map 65

Add data to the map 66

Create ground polygons 66

Display a queried subset of Pennsylvania cities 67

Change the layer's name and symbol 68

Add Pennsylvania's state capital city 69

Change the layer's name and symbol 70

Create hyperlinks 71

Create a dynamic hyperlink 71

Launch the hyperlink 72

Create MapTips 73

Exercise Assignment 2-1 Map showing schools in the city of Pittsburgh by enrollment 74

Exercise Assignment 2-2 Map showing K-12 population versus school enrollment 75

GIS Tutorial 3 GIS Outputs 77

- Launch ArcMap 78
- Open an existing map 79
- Use interactive GIS 80
- Produce print layouts 81
 - Choose a built-in layout template 81
 - Set up and customize the template page 82
- Create a custom map template and map series 84
 - Start a new map 84
 - Complete the new map project 85
 - Set up the layout view 86
 - Add elements 87
 - Use the custom template for a new map 88
- Create a custom map template for multiple maps 90
 - Create a new map 90
 - Add elements 91
- Add reports to a layout 92
 - Open an existing map 92
 - Make a selection of records 92
 - Start the report 93
 - Finish the report 94
 - Add the report to a layout 95
 - Add final touches to the layout 96
- Add graphs to a layout 97
 - Open an existing map 97
 - Select records for graphing 97
 - Create a graph in ArcMap 98
 - Export data 99
 - Import data into Microsoft Excel 99
 - Create a graph in Microsoft Excel 100
 - Add the Microsoft Excel graph to the layout 101
- Export layouts as files 102
- Other outputs 103

Exercise Assignment 3-1 *Layout comparing males, females, and young population in Orange County, California* 104

Exercise Assignment 3-2 *Walking map of historic districts in downtown Pittsburgh* 105

GIS Tutorial 4 Geodatabases 107

Launch ArcMap 108
Launch ArcCatalog 109
Create a new personal geodatabase 110

 Create a new geodatabase 110

 Import shapefiles 111

 Import a data table 112

 Add layers to ArcMap 113

 Change layer properties 113

Modify a geodatabase 114

 Examine and modify Layer Attribute Tables 114

 Modify a primary key 115

 Calculate a new column 116

Join tables 118

 Join a table to a map 118

 Symbolize a map 120

Aggregate data 122

 Examine tables to join 122

 Join tables 123

 Extract a subset of points 124

 Spatially join point and polygon layers 126

 Count points by polygon ID 127

 Join a count table to a polygon map 128

 Symbolize the choropleth map 129

 Symbolize the point map for drill down 130

Export data from a geodatabase 132

 Export a table from a personal geodatabase 132

 Export a layer from a personal geodatabase 133

Use ArcCatalog utilities 134

 Copy and paste geodatabase layers 134

 Rename and delete geodatabase layers 135

 Compact a geodatabase 135

Exercise Assignment 4-1 Compare county financial information in a map 136

Exercise Assignment 4-2 Map by census tract a count of schools and the number of K–12 students enrolled in schools 138

GIS Tutorial 5 Importing Spatial and Attribute Data 141

- Sources of maps and data 142
 - ESRI Web site 142
 - Navigate to free ESRI data 143
 - Download ESRI basemaps 144
 - Add the data in ArcMap 147
 - Geography Network 148
 - Download Census TIGER/Line Data 149
 - Download census tracts and data for a county 150
 - Extract files 151
 - U.S. Census Bureau 152
 - American FactFinder 153
 - Create and download American FactFinder data tables 154
- Vector spatial data formats 156
 - Coverages 156
 - Add a coverage in ArcMap 157
- Convert a coverage to a shapefile 158
 - Shapefiles 159
 - Add a shapefile in ArcMap 160
 - Interchange (.e00) files 161
 - Start ArcCatalog 161
 - Annotation layers 162
 - CAD files 165
 - Add a CAD file as a layer for display 166
 - Add a CAD file as a layer for edit and analysis 167
 - Export shapefiles to CAD 169
 - Copy the shapefile to the root directory 169
 - XY event files 170
- World and U.S. projections 172
 - World projections 172
 - Change the map's projection to Mercator 173
 - Change the map's projection to Hammer-Aitoff and then to Robinson 174
 - Projections of the USA 175
 - Albers equal area conic projection 175
- State Plane coordinate system 176
 - Add a map without State Plane coordinates 176
 - Set the coordinate projection for the map 177
 - Convert 2000 census tracts to a State Plane shapefile 179
 - Add a map with State Plane coordinates 180
- Stored metadata 181
 - Start ArcCatalog and view metadata 181
- Attribute data 183
 - Adding and opening .dbf (dBASE) files 183
 - Adding and opening comma delimited .csv files 184
 - Microsoft Access tables 185
- Exercise Assignment 5-1 Maps showing population changes for Florida counties 186**
- Exercise Assignment 5-2 Create a voting district map for a local election 188**

GIS Tutorial 6 Digitizing 191

Create a new polygon shapefile 192

- Create a new polygon shapefile 192
- Start ArcMap: Open a map document 193
- Add the shapefile to a map 194

Digitize and edit the polygon layer 195

- Open the Editor toolbar 195
- Practice digitizing a polygon 196
- Practice editing a polygon 197

Vertices 199

- Move vertex points 199
- Add vertex points 200
- Delete vertex points 200

Drawing and editing tips 201

- Advanced Edit tools 201
- Precision snapping 201
- Specify a segment length 201
- Edit tasks 202
- Adding other graphics 202

Digitize the commercial zone polygons 203

- Add feature attribute data 204
- Label the commercial zones 205

Digitize a point layer 206

- Create a point layer for evacuation shelters 206
- Add evacuation shelter points 207
- Add a name field to the EvacShelter attribute table 208
- Add name attributes to the EvacShelter records 209

Digitize a line layer 210

- Create a line shapefile for an evacuation route 210
- Change the line symbol for the evacuation route 210
- Prepare area for digitizing 211
- Start editing 211
- Digitize by snapping to features 212
- Save your edits and the map 213

Spatial adjustment 215

- Add aerial photos to a map 215
- Adjust the transparency values of the aerial photos 216
- Add a building outline 217
- Move the building 218
- Rotate the building 219

Transform the building to the aerial photo 220

- Add displacement links 220
- Edit displacement links 222
- Adjust the building 223

Exercise Assignment 6-1 Digitizing police beats 224

Exercise Assignment 6-2 Using GIS to track campus information 226

GIS Tutorial 7 Geocoding 229

Geocode data by zip code 230

Open the Pennsylvania zip code map 230

Add the FLUX Attendee data file 231

Build address locators for zip codes 232

Specifying a reference table (zip codes) 233

Add address locator to map 235

Batch match 236

Prepare table for geocoding 236

Review unmatched zip codes 238

Fix and rematch zip codes 239

Rematch zip codes 240

Geocode to streets 241

Prepare data and street maps 242

Create an address locator for streets 243

Specify a reference table (streets) 244

Create address locator 245

Add address locator to a map 246

Interactively locate addresses 247

Show address on map 248

Perform batch geocoding 250

Prepare table for geocoding 250

Correct addresses using interactive rematch 252

Match interactively 252

Correct street layer addresses 254

Open a new map 254

Create a new address locator 255

Geocode clients' addresses to CBD streets 256

Identify and isolate streets for unmatched address 257

Identify and isolate unmatched streets 258

Modify the attributes of CBDStreets 259

Use alias tables 262

Add an alias table and rematch addresses 262

Exercise Assignment 7-1 Geocode household hazardous wastes participants to zip codes 264

Exercise Assignment 7-2 Geocode ethnic businesses to Pittsburgh streets 266

GIS Tutorial 8 Spatial Data Processing 269

- Launch ArcMap 270
- Open an existing map 271
- Use data queries to extract features 272
 - Use the ArcMap Select By Attributes dialog 272
 - Show selected features and convert to shapefile 273
 - Use the ArcMap Select Features tool 274

- Clip features 275
 - Use the ArcMap Select By Location tool 275
 - Show selected features and convert to shapefile 276
 - Clip the Manhattan streets 277

- Dissolve features 279
 - Open an existing map 279
 - Dissolve zip codes using the ArcMap command line 280

- Append layers 283
 - Open an existing map 283
 - Create an empty polygon layer for appending 284
 - Append several shapefiles into one shapefile 284

- Union layers 286
 - Open an existing map 286
 - Union shapefiles 287

- ModelBuilder 289
 - Open an existing map 289
 - Create a new model 290
 - Add a Clip operation to the model 291
 - Connect PATractStatePlane layer to Clip tool 292
 - Connect Union function to layers 293
 - Run the model 295
 - Display the new shapefile 296

Exercise Assignment 8-1 Build a study region for Colorado counties 298

Exercise Assignment 8-2 Dissolve property parcels to create a zoning map 300

GIS Tutorial 9 Spatial Analysis 303

Buffer points for proximity analysis 304

Open map 304

Buffer bars 305

Extract assault offenses in bar buffers 306

Conduct a site suitability analysis 308

Open a map 308

Add X and Y columns to car beats 308

Compute car beat centroids 308

Map car beat centroids 310

Buffer car beat centroids 311

Buffer retail businesses 312

Select major streets 313

Buffer major streets 314

Intersect buffers 315

Apportion data for noncoterminous polygons 316

Approach to apportionment 317

The math of apportionment 318

Preview of apportionment steps 319

Create Tract ID and AGE22Plus fields in the attributes of block centroids 320

Sum Age22Plus by tracts 322

Intersect car beats and tracts 323

Overlay the intersection of car beats and tracts with block centroids 324

Join the summary attributes to the spatial join output 325

Compute apportionment weights 326

Compute apportionment values 327

Sum weights by tract 328

Sum undereducated by car beats 329

Join Sum_UnderEducated to the car beat layer 330

Map undereducated population by car beat 331

Wrap up 332

Exercise Assignment 9-1 Analyze population in California cities at risk for earthquakes 333

Exercise Assignment 9-2 Neighborhood walking distances and urban grocery store site selection 335

Appendix A Data License Agreement 339

Appendix B Installing the Data and Software 343
