Preface xv

## **GIS Tutorial 1**    **Introducing GIS and health applications**    **1**

What is GIS? 2

Spatial data 2

Digital map infrastructure 4

Unique capabilities of GIS 5

Installing ArcView and the health tutorial data CD 10

Introducing the ArcGIS user interface 11

Launch ArcCatalog 11

Review data source types 15

Launch ArcMap 18

View map layer attribute tables 21

View map layer properties 22

Use the map 25

Summary 28

*Exercise assignment 1-1*

**Benchmark health GIS Web sites** 30

## **GIS Tutorial 2**    **Visualizing health data**    **31**

Manipulate map layers in a map document 33

Launch ArcMap and open an existing map document 33

Add a layer 35

Change a layer's display order 36

Rename a layer 38

Change a boundary layer's fill color 38

Change a layer's outline color 39

Change a layer's outline width 40

Zoom and pan health features on a map 42

Zoom in 42

Pan 43

Zoom to full extent 44

Create spatial bookmarks 45

Identify cancer mortality rates and deaths by state 46

Identify features 46

## **GIS Tutorial 2 Visualizing health data (continued)**

### **Select map features 49**

- Select multiple features 49
- Zoom to selected features 50
- Clear selected features 50
- Change selection color 51
- Change selectable layers 51

### **Find map features 53**

#### **Use an attribute table to select counties with the highest number of breast cancer deaths 55**

- Open an attribute table 55
- Show the connection between layers and tables 56
- Move a field 57
- Sort a single field 57
- Select the top five counties 58
- Show only selected records 58
- Clear selected records 59
- Sort multiple fields 59

### **Create a new layer of a subset of features 61**

- Select the most populated cities 61
- Create a layer from selected features 61
- Create a new symbol for the new layer 62
- Label major cities in Texas 63
- Set label properties and features 63
- Remove labels 64
- Convert labels to annotations 64
- Move labels 65
- Save the project and exit ArcMap 66

### **Summary 67**

#### **Exercise assignment 2-1 Lung cancer mortality maps 68**

#### **Exercise assignment 2-2 State lung cancer mortality maps 70**

## **GIS Tutorial 3 Designing maps for a health study 73**

### **Begin a new map document 76**

#### **Create a choropleth map for the uninsured population in Texas 77**

- Add a layer and change its name 77
- Select an attribute to display uninsured population 78
- Create custom classifications 80
- Manually change classification values for percentage uninsured 81
- Change labels 81
- Build a custom-color ramp 84
- Save the Texas health-study map 85

#### **Create a point map for percentage of unemployed in Texas 86**

- Symbolize unemployment data as graduated points 86
- Modify point classifications 87
- Make a scatter plot comparing uninsured and unemployed populations 88

Save the changes to your Texas health-study map 89

## Work with layer files 90

Create a layer file 90

Create a group layer and add saved layers 91

Save the new Texas health-study map 93

## Print layouts for a health-care study 94

Choose a prebuilt layout template 94

Add layers to the map layout 95

## Create custom map layouts for multiple maps 96

Build a custom layout grid 96

Add layers and create multiple data frames 97

Classify data 98

Rename data frames 99

Add map titles and text 99

Add a legend 101

Unify map scales 102

Save the Texas health-study map 103

## Export maps 104

Export a map to an image file 104

Copy and paste map images 105

## Summary 106

**Exercise assignment 3-1**

**Map comparing uninsured populations in California counties 107**

**Exercise assignment 3-2**

**Map showing detailed Texas county demographics 108**

## **GIS Tutorial 4 Projecting and using spatial data 111**

### Explore map projections for world AIDS study 115

Open an existing map 115

Change Data Frame 1's projection to Mercator 116

### Symbolize area maps using size-graduated point markers 118

Start a new map document 118

Symbolize layers 119

Create a prevalence map using point markers 121

### Explore map projections for U.S. lung cancer study 123

### Prepare GIS data for a local health study 124

Add an ArcView shapefile 124

Set scale ranges 126

Add a CAD file 128

Import an ArcInfo interchange file and add an ArcInfo coverage 129

Export the coverage to a shapefile 130

Add an event file 130

Change the data frame projection to UTM 131

Add an aerial photo to the map 132

Improve labeling at the neighborhood level 133

Set parks as semitransparent 134

## Summary 135

**Exercise assignment 4-1**

**Map showing world infant mortality rates and life expectancy 136**

**Exercise assignment 4-2**

**Map comparing walkable neighborhoods 137**

Download spatial and attribute data from the U.S. Census Bureau 142

Lower Internet Explorer's security setting for downloading 142

Download a TIGER/Line shapefile for census tracts 143

Clean the census tract attribute data 145

Download an SF3 housing variable 149

Download census tract housing data from SF3 151

Clean census tract SF3 data in Excel 152

Download a shapefile from the ESRI Census TIGER/Line data Web site 154

Download spatial data 154

Build a map layer for elevated blood levels of lead in children 156

Extract Allegheny County tracts from Pennsylvania tracts 156

Create a text data type version of the Tract ID 158

Join housing and elevated blood cases tables to census tract map 160

Permanently join tables 161

Create a new personal geodatabase 162

Import a shapefile into the geodatabase 162

Build a lead-study comparison map 163

Add map layers and project the data frame 163

Symbolize map layers 163

Summary 165

**Exercise assignment 5-1 Map housing values compared to elevated blood levels of lead 166**

**Exercise assignment 5-2 Map housing complaints compared to elevated blood levels of lead 168**

## **GIS Tutorial 6 Geocoding tabular data 171**

Geocode patients to ZIP Code centroids 174

Begin a new health-care map project 174

Add a ZIP Code layer 174

Add patient database and open its attribute table 174

Build address locator for ZIP Codes 175

Add address locator in ArcMap 177

Geocode patients using new address locator 177

Spatially join patient and ZIP Code layers 180

Spatially join points to polygons 180

Create a choropleth map showing patient counts by ZIP Codes 183

## Geocode hospital addresses to streets for competitive analysis 185

- Begin a new health-care map 185
- Add streets layer 185
- Add hospital database 186
- Build an address locator for streets 187
- Geocode hospitals using new address locator 188
- Interactively rematch an address 190
- Interactively rematch more addresses 192
- Use street TIGER/Line maps to find addresses 194
- Rematch addresses 197

## Create a final comparison map 199

### Summary 200

#### **Exercise assignment 6-1**

#### **Map mammography clinics by ZIP Code compared to females ages 40–64 201**

#### **Exercise assignment 6-2**

#### **Map mammography clinics in a county by street address 203**

## **GIS Tutorial 7 Analyzing youth pedestrian injuries 205**

### Prepare study region 210

- Extract Pittsburgh.shp 210
- Clip water polygons 211
- Edit the rivers features 213
- Extract streets and tracts for Pittsburgh 216
- Join tracts and the census data table 218
- Append injury shapefiles 219
- Clean up your map and rename a shapefile 220
- Set the projection for the data and map layers 220
- Add City Planning (PAGIS) map layers 222
- Dissolve tracts to build the neighborhoods map layer 223

### Investigate the correlation of poverty and injuries 226

- Intersect map layers 226
- Aggregate records 228
- Join tables 230
- Symbolize map layers 232
- Count injuries by top and bottom 40 percent quantiles 233

### Investigate injuries near parks 236

- Build multiple-ring buffers 236
- Analyze injuries and population using buffers 237

### Summary 241

#### **Exercise assignment 7-1**

#### **Additional sensitivity analysis 242**

#### **Exercise assignment 7-2**

#### **Map injuries near schools and convenience stores 243**

**Aggregate block data for elderly population to health-referral regions 249**

- Open an existing map 249
- Compute block centroid coordinates 251
- Create a block centroid shapefile 253
- Assign block centroids a spatial reference 254
- Spatially join health-referral areas to block centroids 255
- Aggregate block data to the health-referral region level 256
- Use the new aggregate data 257

**Apportion SF3 data 259**

- Spatially join ZipCodes to BlockCentroids 261
- Use the mid( ) function to calculate BlkGrpID 263
- Create a new field in BlockCentroidsXZip 265
- Join Blocks to BlockCentroidsXZip 265
- Calculate new field 266
- Remove Join 267
- Create another new field in BlockCentroidsXZip 268
- Summarize Indicator field by IntID 270
- Add Denominator field 271
- Join BlkGrpSF1 to Blocks\_Dissolve 272
- Calculate Denominator field 272
- Remove the Join from Blocks\_Dissolve 273
- Calculate the apportionment weights 274
- Join SF3 data to Blocks\_Dissolve 275
- Sum the SF3 attribute by ZIP Code 277
- Cleanup 277

**Start building a model 279**

- Create a new toolbox and model 279
- Spatially join ZipCodes to BlockCentroids 279
- Add and calculate a field 282

**Summary 285**

**Exercise assignment 8-1    Population variables for health-service areas 286**

**Exercise assignment 8-2    Population in urban areas 287**

**GIS Tutorial 9    Case study: Studying food-borne disease outbreaks 289**

- Part 1: Assemble basemaps 293
- Part 2: Trace an outbreak source 295
- Part 3: Identify affected office buildings 296
- Part 4: Assess vulnerable populations 297

# Acknowledgments

Phase 1: Creating market analysis maps 301  
Phase 2: Creating a territory analysis map 302  
Phase 3: Tracking chapter status 304

Appendix A Data license agreement 305  
Appendix B Installing the data and software 309  
Appendix C Data source credits 317

We would like to thank all

GIS Tutorial for Health was used by students at Pennsylvania State University before it went to ESRI Press for publication. During this time, the students and teaching assistants who used the book provided us with significant feedback. Their thoughtful comments guided our revisions and helped improve the content and overall quality of this book.

We are very grateful to the many individuals, organizations, and vendors who have generously supplied us with interesting GIS cases and data, including: Dr. Bruce Dixon, Gerald Barron, Jo Ann Glad, Dr. LuAnn Brink, Glenda Cherry, Dan Cincanski, Mike Diskin, Bruce Good, Dave Namey, and Thom Strigowski of the Allegheny County Health Department; Ross Capaccio of ross design + consulting and Thom D. Freyre, CAB of the American College of Healthcare Executives for the datasets used in the "Partners for Success" chapter deployment project; Carl Kinkade of the Centers for Disease Control and Prevention (CDC); Noel S. Zuckerbraun, MD, MPH, assistant professor of pediatrics, Department of Pediatrics, Division of Pediatric Emergency Medicine, Children's Hospital of Pittsburgh, University of Pittsburgh School of Medicine; Barbara A. Gains, MD, director, Benedum Trauma Program, assistant professor of surgery, Children's Hospital of Pittsburgh, University of Pittsburgh School of Medicine; Susan Golomb, Mike Moma, and Lena Andrews of the City of Pittsburgh, Department of City Planning; The Trustees of Dartmouth College, The Dartmouth Atlas of Health Care ([www.dartmouthatlas.org](http://www.dartmouthatlas.org)); Linda Williams Pickle, PhD, and David Strachan of the National Cancer Institute, The Cancer Mortality Maps & Graph Web site (<http://www3.cancer.gov/atlas/atlaschoice/>); Chris Chalmers, GIS coordinator, Nebraska Health and Human Services, Bioterrorism Response Section director for GIS Public Health Research, University of Nebraska-Lincoln, CALMIT; Maurie Kelly of Pennsylvania Spatial Data Access (PASDA); U.S. Geological Survey and U.S. Census Bureau; Tele Atlas for use of their USA datasets contained within the ESRI Data & Maps 200+ Media Kit.

Finally, thanks to the entire team at ESRI, especially Bill Davenport, Ann Bossard, Seth Wolfe, Peggy Harper, Judy Hawkins, Laura Bowden, Kerri Manorek, and the production and editing staff at ESRI Press including Claudia Naber, Michael Law, Colleen Langley, and Jay Loteria.
