

Contents

1 Introduction 1

- Rich suite of graphical editing tools 2
- ArcGIS data editor 3
- Editing in data view and layout view 4
- Tools for editing and managing topologies 5
- Tools for editing and managing networks in a geodatabase 6
- Context menus and shortcut keys for increased productivity 7
- Tools for rubber sheeting, adjusting, and edgematching feature data 8
- Multiuser editing with version management and conflict detection 9
- Remote editing of data checked out from your versioned geodatabase 10
- Editing in projected space 11
- Tips on learning how to edit in ArcMap 12

2 Editing basics 13

- An overview of the editing process 14
- The Editor toolbar 16
- Exploring the Editor toolbar 17
- Editor keyboard shortcuts 23
- The Advanced Editing toolbar 24
- Adding editing toolbars 25
- Upgrading a geodatabase 26
- Adding the data you want to edit 27
- Starting and stopping an edit session 28
- Managing the edit cache 31
- Changing the options of the task menu 33
- Selecting features 34
- Moving features 38
- Copying and pasting features 42
- Deleting features 43
- Setting the number of decimal places used for reporting measurements 44

3 Creating new features 45

- How to create a new feature 46
- Creating point features and vertices 52
- Creating lines and polygons 63
- Creating segments using directions and lengths 69
- Creating segments using angles from existing segments 73
- Creating segments that are circular arc curves 77
- Creating segments by tracing features 82
- Duplicating features with the Copy feature tool 83
- Creating a fillet curve between two lines 84
- Extending a line 85
- Trimming a line 86
- Proportionally dividing a line 87
- Getting a COGO description of a feature with the Inverse tool 89
- Creating edit sketch geometry with the Traverse tool 90
- Creating two-point line features to populate COGO attributes 95
- Obtaining a closure report 97
- Techniques for adjusting a traverse 98
- Saving a traverse 100
- Loading a traverse 101
- Exploding a multipart feature 102
- Generalizing a feature 103
- Smoothing a feature 104
- The Snapping Environment window 105
- Types of snapping properties 106
- Using the snapping environment 107
- The Snap to Feature command 110
- Setting the direction measuring system and units for editing tools 111
- Setting the direction type and angular units 113
- Setting the ground to grid conversion 115
- Using a ground to grid correction 116
- Setting the distance units for tools 118
