1	Introduction: What is alpine?	1
2	High mountains in latitude life zones: a worldwide perspective	6
	2.1 Introduction	6
	2.2 Arctic mountains	7
	2.3 Boreal mountain regions	7
	2.4 Temperate regions	14
	2.5 Subtropical mountains	17
	2.6 Tropical regions	19
3	Elevation gradients	21
	3.1 Introduction	21
	3.2 Climate and elevation	22
	3.3 Elevation pattern in weathering and soils	28
	3.4 Elevation and vegetation zonation	28
	3.5 Species richness in relation to elevation	36
	3.6 Invertebrates	43
	3.7 Vertebrates	44
	3.8 Geography and vegetation altitude boundary shifts	47
	3.9 Conclusions	49
4	The alpine environment: energy and climate	52
	4.1 Introduction	52
	4.2 The atmosphere–surface system	53
	4.3 Other atmospheric physical and chemical factors related to climate	59
	4.4 Relief energy in alpine landscapes	64

4.5	Alpine zone climates	67
4.6	Conclusions	74
5	Habitat creating factors: landforms, hydrology, and soils	76
5.1	Introduction	76
5.2	Landforms	76
5.3	Hydrological characteristics of alpine landscapes	85
5.4	Soils	91
5.5	Nutrient budgets: the atmosphere–plant–soil system	105
5.6	Climatic seasonality and plant available soil nutrients	112
5.7	Nutrient limitation in alpine ecosystems?	114
5.8	Conclusions	116
6	Alpine terrestrial habitats and community types/assemblages	117
6.1	Introduction	117
6.2	Arctic alpine habitats and community types	120
6.3	Boreal zone mountains: dwarf-shrub heaths	126
6.4	Temperate mountains: sedge heaths	141
6.5	The interface between temperate and subtropical mountains: the Himalayas	156
6.6	Subtropical sclerophyllous forest zone	159
6.7	Aseasonal tropical alpine habitats	164
6.8	Seasonal tropical alpine environments	169
6.9	Conclusions	171
7	Biogeography, adaptation, and evolution of alpine organisms	173
7.1	Introduction	173
7.2	The backdrop: orogenesis and past climatic changes	174
7.3	The biogeography of regions	180
7.4	Species richness and the applicability of the theory of island biogeography to the alpine zone mountains	192
7.5	Adaptation, survival, and evolution of alpine organisms	199
7.6	Conclusions	222
8	Temporal and spatial dynamics	224
8.1	Introduction	224
8.2	Alpine primary succession	224

8.3	The case of glacier forelands	231
8.4	Secondary succession	239
8.5	Post-succession vascular plant establishment, growth, and dynamics	240
8.6	The role of extraneous drivers	255
8.7	Conclusions	263
9	Global change impacts on alpine habitats: climate and nitrogen deposition	265
9.1	Introduction	265
9.2	The environment and its change in space and time	265
9.3	Climatic drivers: forecasts and scenarios of future climate changes	271
10	Land use and conservation of alpine landscapes, ecosystems, and species	289
10.1	Introduction	289
10.2	Land use from a brief historic perspective	289
10.3	Conservation of alpine landscapes and habitats	302
10.4	Conclusions	312
11	Concluding remarks	313
