

Contents

Preface.....	vii	12. Cervical spine biomechanics	165
Additional On-line Information.....	viii	13. Posture, creep and 'functional pathology'.....	173
1. Introduction	1	14. Sensorimotor control	189
2. The vertebral column and adjacent structures	9	15. Spinal degeneration.....	195
3. Muscles and fascia of the lumbar spine	27	16. Preventing back pain.....	219
4. Nerves and blood supply to the lumbar spine.....	41	17. Conservative management of back pain.....	227
5. Back pain.....	47	18. Biomechanics rationale for spinal surgery	243
6. Epidemiology of back trouble.....	53	19. Surgery for disc prolapse, spinal stenosis and back pain.....	247
7. Biology of spinal tissues.....	67	20. Medicolegal considerations.....	259
8. Growth and ageing of the spine.....	87	21. Summary and conclusions.....	265
9. Forces acting on the thoracolumbar spine	101	References	273
10. Mechanical function of the thoracolumbar spine	113	Index.....	327
11. Mechanical damage to the thoracolumbar spine	137
