Introduction. A Framework for the Role of Time in Ecology	1
1. What Is Time?	7
Philosophical Views of Time: Idealism, Relationism, and Realism	7
A-Series, B-Series, and the Flow of Time	9
Space-Time and Astrophysical Theories of Time	11
2. Phenological Advance, Stasis, and Delay	15
Phenology versus Seasonality	15
Ubiquitous Variability in Phenological Trends	20
Phenological Dynamics across Taxa, Latitude, and Time	26
Variation in Rates of Land-surface Warming across Latitude and Time	37
3. Ecological Time	43
Time as a Resource in Ecology	45
Scales of Time in the Domain of Phenology	50
Timing and Duration of Life History Events	53
The Adaptive Value of Phenological Advance, Stasis, and Delay	55
Parallels and Contrasts between the Notions of Space and Time as Resources	59
Three Forms of Time: Cosmological, Recurrent, and Relative Ecological Time	60
The Space-Time Continuum in a Life History Context	63
Fragmentation of Time	64
4. The Phenological Niche	67
The Absolute Phenological Niche	67
The Relative Phenological Niche	71
Mutualisms and the Relative Phenological Niche	82
Biodiversity Implications of Phenological Niche Conservatism in Specialist Associations	85
Biodiversity Implications of Phenological Niche Conservatism in Generalist Associations	89

5. The Phenological Community	94
The Compositional versus Phenological Community	94
Phenological Community Dynamics and Species' Rank Order	98
Niche Packing and Changes in the Availability of Ecological Time	104
6. Use of Time in the Phenology of Horizontal Species Interactions	107
Timing and Duration: Responses to Potentially Distinct Selection Pressures	107
Variation in Timing within and among Individuals and Species	112
Variation in Timing among Species within Communities	117
Empirical Applications to Horizontal Phenological Communities	119
Indices of Phenological Overlap among Species	124
7. Use of Time in the Phenology of Vertical Species Interactions	133
The Use of Time in Bitrophic-level Systems	134
Applications to Mutualisms	138
The Use of Time in Tritrophic-level Systems	139
Phenological Cascades	142
Empirical Assessment of Phenological Dynamics in Bitrophic-level Systems	143
An Empirical Example of a Phenological Cascade	155
Additional Examples of Changes in the Use of Time in Tritrophic-level Systems	159
Final Considerations of the Use of Time in Pollinator-Plant Associations	163
8. Limitations and Extension to Tropical Systems	167
Seasonal and Interannual Phenological Dynamics in Tropical Systems	170
Partitioning of Time in Phenological Communities in the Tropics	176
Availability of Time Related to Energy Input	178
9. The More General Role of Time in Ecology	180
Appendix A. Online Resources of Relevance to Phenology	187
Appendix B. Sources Used in the Meta-analysis in Chapter 2	191
References	195
