

# Contents

<b>1</b>	<b>A Tutorial Introduction to Python</b>	<b>1</b>
1.1	The IDLE Integrated Development Environment for Python	2
1.1.1	Tutorial One: Using Python as a Powerful Calculator	4
1.1.2	Tutorial Two: Simple Programming with Python . . .	6
1.1.3	Tutorial Three: Simple Plotting Using the Turtle Module . . . . .	9
1.2	Anaconda, Spyder and the Libraries, SymPy, Numpy, and Matplotlib . . . . .	14
1.2.1	Tutorial One: A Tutorial Introduction to SymPy . . .	15
1.2.2	Tutorial Two: A Tutorial Introduction to Numpy and Matplotlib . . . . .	18
1.2.3	Tutorial Three: Simple Programming, Solving ODEs, and More Detailed Plots . . . . .	20
1.3	Exercises . . . . .	27
<b>2</b>	<b>Differential Equations</b>	<b>33</b>
2.1	Simple Differential Equations and Applications . . . . .	34
2.1.1	Linear Differential Equations . . . . .	34
2.1.2	Separable Differential Equations . . . . .	35
2.1.3	Exact Differential Equations . . . . .	39
2.1.4	Homogeneous Differential Equations . . . . .	40
2.2	Applications to Chemical Kinetics . . . . .	44
2.3	Applications to Electric Circuits . . . . .	48
2.4	Existence and Uniqueness Theorem . . . . .	53
2.5	Python Programs . . . . .	57
2.6	Exercises . . . . .	59
<b>3</b>	<b>Planar Systems</b>	<b>65</b>
3.1	Canonical Forms . . . . .	66
3.1.1	Real Distinct Eigenvalues . . . . .	68
3.1.2	Complex Eigenvalues ( $\lambda = \alpha \pm i\beta$ ) . . . . .	69
3.1.3	Repeated Real Eigenvalues . . . . .	70

3.2	Eigenvectors Defining Stable and Unstable Manifolds . . . . .	72
3.3	Phase Portraits of Linear Systems in the Plane . . . . .	74
3.4	Linearization and Hartman's Theorem . . . . .	78
3.5	Constructing Phase Plane Diagrams . . . . .	79
3.6	Python Programs . . . . .	87
3.7	Exercises . . . . .	90
<b>4</b>	<b>Interacting Species</b>	<b>95</b>
4.1	Competing Species . . . . .	96
4.2	Predator-Prey Models . . . . .	99
4.3	Other Characteristics Affecting Interacting Species . . . . .	104
4.4	Python Programs . . . . .	107
4.5	Exercises . . . . .	108
<b>5</b>	<b>Limit Cycles</b>	<b>113</b>
5.1	Historical Background . . . . .	114
5.2	Existence and Uniqueness of Limit Cycles in the Plane . . . . .	117
5.3	Nonexistence of Limit Cycles in the Plane . . . . .	123
5.4	Perturbation Methods . . . . .	127
5.5	Python Programs . . . . .	136
5.6	Exercises . . . . .	139
<b>6</b>	<b>Hamiltonian Systems, Lyapunov Functions, and Stability</b>	<b>145</b>
6.1	Hamiltonian Systems in the Plane . . . . .	146
6.2	Lyapunov Functions and Stability . . . . .	151
6.3	Python Programs . . . . .	157
6.4	Exercises . . . . .	158
<b>7</b>	<b>Bifurcation Theory</b>	<b>163</b>
7.1	Bifurcations of Nonlinear Systems in the Plane . . . . .	164
7.1.1	A Saddle-Node Bifurcation . . . . .	165
7.1.2	A Transcritical Bifurcation . . . . .	167
7.1.3	A Pitchfork Bifurcation . . . . .	167
7.1.4	A Hopf Bifurcation . . . . .	170
7.2	Normal Forms . . . . .	170
7.3	Multistability and Bistability . . . . .	174
7.4	Python Programs . . . . .	178
7.5	Exercises . . . . .	180
<b>8</b>	<b>Three-Dimensional Autonomous Systems and Chaos</b>	<b>185</b>
8.1	Linear Systems and Canonical Forms . . . . .	186
8.2	Nonlinear Systems and Stability . . . . .	190
8.3	The Rössler System and Chaos . . . . .	194

8.3.1	The Rössler Attractor . . . . .	194
8.3.2	Chaos . . . . .	196
8.4	The Lorenz Equations, Chua's Circuit, and the Belousov-Zhabotinski Reaction . . . . .	199
8.4.1	The Lorenz Equations . . . . .	199
8.4.2	Chua's Circuit . . . . .	201
8.4.3	The Belousov-Zhabotinski (BZ) Reaction . . . . .	204
8.5	Python Programs . . . . .	207
8.6	Exercises . . . . .	211
<b>9</b>	<b>Poincaré Maps and Nonautonomous Systems in the Plane</b>	<b>215</b>
9.1	Poincaré Maps . . . . .	216
9.2	Hamiltonian Systems with Two Degrees of Freedom . . . . .	221
9.3	Nonautonomous Systems in the Plane . . . . .	227
9.4	Python Programs . . . . .	235
9.5	Exercises . . . . .	239
<b>10</b>	<b>Local and Global Bifurcations</b>	<b>245</b>
10.1	Small-Amplitude Limit Cycle Bifurcations . . . . .	246
10.2	Gröbner Bases . . . . .	252
10.3	Melnikov Integrals and Bifurcating Limit Cycles from a Center . . . . .	258
10.4	Bifurcations Involving Homoclinic Loops . . . . .	260
10.5	Python Programs . . . . .	262
10.6	Exercises . . . . .	266
<b>11</b>	<b>The Second Part of Hilbert's Sixteenth Problem</b>	<b>271</b>
11.1	Statement of Problem and Main Results . . . . .	272
11.2	Poincaré Compactification . . . . .	275
11.3	Global Results for Liénard Systems . . . . .	281
11.4	Local Results for Liénard Systems . . . . .	290
11.5	Python Programs . . . . .	291
11.6	Exercises . . . . .	292
<b>12</b>	<b>Delay Differential Equations</b>	<b>297</b>
12.1	Introduction and the Method of Steps . . . . .	298
12.2	Applications in Biology . . . . .	304
12.3	Applications in Nonlinear Optics . . . . .	310
12.4	Other Applications . . . . .	313
12.5	Python Programs . . . . .	315
12.6	Exercises . . . . .	320

<b>13 Linear Discrete Dynamical Systems</b>	<b>327</b>
13.1 Recurrence Relations . . . . .	328
13.2 The Leslie Model . . . . .	333
13.3 Harvesting and Culling Policies . . . . .	337
13.4 Python Programs . . . . .	342
13.5 Exercises . . . . .	343
<b>14 Nonlinear Discrete Dynamical Systems</b>	<b>347</b>
14.1 The Tent Map and Graphical Iterations . . . . .	348
14.2 Fixed Points and Periodic Orbits . . . . .	353
14.3 The Logistic Map, Bifurcation Diagram, and Feigenbaum Number . . . . .	360
14.4 Gaussian and Hénon Maps . . . . .	368
14.5 Applications . . . . .	373
14.6 Python Programs . . . . .	376
14.7 Exercises . . . . .	380
<b>15 Complex Iterative Maps</b>	<b>385</b>
15.1 Julia Sets and the Mandelbrot Set . . . . .	386
15.2 Boundaries of Periodic Orbits . . . . .	391
15.3 The Newton Fractal . . . . .	395
15.4 Python Programs . . . . .	396
15.5 Exercises . . . . .	399
<b>16 Electromagnetic Waves and Optical Resonators</b>	<b>403</b>
16.1 Maxwell's Equations and Electromagnetic Waves . . . . .	404
16.2 Historical Background . . . . .	406
16.3 The Nonlinear SFR Resonator . . . . .	412
16.4 Chaotic Attractors and Bistability . . . . .	413
16.5 Linear Stability Analysis . . . . .	417
16.6 Instabilities and Bistability . . . . .	420
16.7 Python Programs . . . . .	424
16.8 Exercises . . . . .	428
<b>17 Fractals and Multifractals</b>	<b>433</b>
17.1 Construction of Simple Examples . . . . .	434
17.2 Calculating Fractal Dimensions . . . . .	441
17.3 A Multifractal Formalism . . . . .	448
17.4 Multifractals in the Real World and Some Simple Examples	452
17.5 Python Programs . . . . .	459
17.6 Exercises . . . . .	464

<b>18 Image Processing with Python</b>	<b>471</b>
18.1 Image Processing and Matrices . . . . .	472
18.2 The Fast Fourier Transform . . . . .	477
18.3 The Fast Fourier Transform on Images . . . . .	484
18.4 Exercises . . . . .	487
<b>19 Chaos Control and Synchronization</b>	<b>491</b>
19.1 Historical Background . . . . .	492
19.2 Controlling Chaos in the Logistic Map . . . . .	497
19.3 Controlling Chaos in the Hénon Map . . . . .	498
19.4 Chaos Synchronization . . . . .	505
19.5 Python Programs . . . . .	509
19.6 Exercises . . . . .	513
<b>20 Neural Networks</b>	<b>519</b>
20.1 Introduction . . . . .	520
20.2 The Delta Learning Rule and Backpropagation . . . . .	526
20.3 The Hopfield Network and Lyapunov Stability . . . . .	531
20.4 Neurodynamics . . . . .	541
20.5 Python Programs . . . . .	545
20.6 Exercises . . . . .	550
<b>21 Binary Oscillator Computing</b>	<b>557</b>
21.1 Brain Inspired Computing . . . . .	558
21.2 Oscillatory Threshold Logic . . . . .	563
21.3 Applications and Future Work . . . . .	571
21.4 An Assay for Neuronal Degradation . . . . .	577
21.5 Python Programs . . . . .	579
21.6 Exercises . . . . .	584
<b>22 Coursework and Examination-Type Questions</b>	<b>591</b>
22.1 Examples of Coursework Questions . . . . .	592
22.2 Examination 1 . . . . .	607
22.3 Examination 2 . . . . .	610
22.4 Examination 3 . . . . .	613
<b>23 Solutions to Exercises</b>	<b>619</b>
23.1 Chapter 1 . . . . .	619
23.2 Chapter 2 . . . . .	622
23.3 Chapter 3 . . . . .	623
23.4 Chapter 4 . . . . .	625
23.5 Chapter 5 . . . . .	626
23.6 Chapter 6 . . . . .	628
23.7 Chapter 7 . . . . .	628

23.8	Chapter 8	630
23.9	Chapter 9	631
23.10	Chapter 10	631
23.11	Chapter 11	632
23.12	Chapter 12	634
23.13	Chapter 13	634
23.14	Chapter 14	636
23.15	Chapter 15	637
23.16	Chapter 16	638
23.17	Chapter 17	638
23.18	Chapter 18	639
23.19	Chapter 19	639
23.20	Chapter 20	640
23.21	Chapter 21	640
23.22	Chapter 22	641
<b>Appendix A Index of Python Programs</b>		<b>645</b>
A.1	IDLE Python Programs	645
A.2	Anaconda Python Programs	646
<b>Index</b>		<b>651</b>
