## 1. Bird diversity survey methods

1

Colin J. Bibby

- 1.1 Introduction 1
- 1.2 Designing the fieldwork 3
- 1.3 Finding the birds 4
- 1.4 Standardizing the effort by time and space 6
- 1.5 Standardizing the effort by McKinnon's list method 7
- 1.6 Atlas studies 8
- 1.7 Estimating species richness 10
- 1.8 Conclusion 11

## 2. Bird census and survey techniques

17

Richard D. Gregory, David W. Gibbons, and Paul F. Donald

- 2.1 Introduction 17
  - 2.1.1 What are bird surveys and why do we need them? 17
  - 2.1.2 What is monitoring and why do we need it? 18
  - 2.1.3 Useful sources of information 19
  - 2.1.4 Begin at the beginning 20
  - 2.1.5 Population size or index? 21
  - 2.1.6 Survey boundaries 21
  - 2.1.7 Census or sample? 22
  - 2.1.8 Sampling strategy 23
  - 2.1.9 Sampling unit 23
  - 2.1.10 Field methods 23
  - 2.1.11 Accuracy, precision, and bias 23
- 2.2 Sampling strategies 27
  - 2.2.1 How many sampling units? 27
  - 2.2.2 Which sampling units to count? 27
  - 2.2.3 Using stratification 29
- 2.3 Field methods 35
  - 2.3.1 Mapping 36
  - 2.3.2 Transects 38
  - 2.3.3 Line transects 39

2.3.4	Point transects	40
2.3.5	Rules for recording birds in the field	41
2.3.6	Choosing between line and point transects	41
2.3.7	Detection probabilities	42
2.3.8	Colonial birds	44
2.3.9	Counting roosts and flocks	45
2.3.10	Counting leks	46
2.3.11	Counting migrants	46
2.3.12	Capture techniques	47
2.3.13	Tape playback	50
2.3.14	Vocal individuality	51
2.4	Conclusions	52
<b>3.</b>	<b>Breeding biology</b>	<b>57</b>
	<i>Rhys E. Green</i>	
3.1	Introduction	57
3.2	Choosing study areas	58
3.3	Measuring the success of individual breeding attempts	58
3.3.1	Finding and selecting nests	58
3.3.2	Recording the stage of a breeding attempt when it is located	60
3.3.3	Precautions to take so that nests can be relocated for checking	61
3.3.4	Nest checking	62
3.3.5	Determination of chick survival for species with precocial young	64
3.3.6	Estimation of nest success from nest check data	66
3.4	Determination of the proximate causes of breeding failure	67
3.4.1	Signs left at the nest	67
3.4.2	Wax or plasticine eggs in the nests of wild birds	68
3.4.3	Cameras	69
3.4.4	Temperature loggers	70
3.5	Using artificial nests to measure nest success and causes of failure	71
3.6	Measuring annual productivity	72
3.6.1	Why measure annual productivity?	72
3.6.2	Productivity from counts after the breeding season	74
3.6.3	Productivity from captures after the breeding season	74
3.6.4	Intensive studies of breeding	75
3.6.5	Indices of productivity from surveys during the breeding season	76
3.6.6	Use of simulation models	76
3.7	Timing of breeding	76
3.8	Measurements of eggs and chicks	78
3.9	Proximate and ultimate causes of breeding failure	79

3.10 Value of experiments to disentangle ultimate and proximate causes of breeding failure	79
--	----

## 4. Birds in the hand 85

Andrew Gosler

4.1 Introduction	85
4.2 Welfare, ethical, and legislative issues	86
4.3 Catching the birds	87
4.3.1 <i>The breeding season</i>	89
4.3.2 <i>Cage traps</i>	90
4.3.3 <i>Spring traps</i>	90
4.3.4 <i>A couple of nestbox traps</i>	91
4.3.5 <i>Noose-carpet traps</i>	91
4.3.6 <i>Mist-nets</i>	92
4.3.7 <i>Clap-nets and whoosh-nets</i>	94
4.3.8 <i>Canon-nets</i>	94
4.3.9 <i>Capture by hand</i>	94
4.4 Individual marking	95
4.5 Notes on bird handling	99
4.6 The bird at close quarters	100
4.6.1 <i>Age and molt</i>	100
4.6.2 <i>Sex</i>	102
4.6.3 <i>Weight</i>	103
4.6.4 <i>Color, for example, UV reflectance</i>	103
4.7 Size	104
4.7.1 <i>Body size</i>	104
4.7.2 <i>Wing</i>	104
4.7.3 <i>Tail</i>	106
4.7.4 <i>Tarsus</i>	106
4.7.5 <i>Tarsus-and-toe</i>	108
4.7.6 <i>Bill</i>	108
4.7.7 <i>Total-head</i>	110
4.7.8 <i>Claw, eye-ring, and other measures</i>	110
4.8 Condition	110
4.8.1 <i>Asymmetry</i>	110
4.8.2 <i>Relative mass</i>	111
4.8.3 <i>Fat reserves</i>	111
4.8.4 <i>Muscle protein</i>	113
4.8.5 <i>Physiological measures</i>	113
4.8.6 <i>Molt and plumage</i>	113
4.8.7 <i>Parasites</i>	114
4.9 Biopsy	115

<b>5. Estimating survival and movement</b>	<b>119</b>
<i>James D. Nichols, William L. Kendall, and Michael C. Runge</i>	
5.1 Introduction	119
5.2 Tag type and subsequent encounters	120
5.3 Survival rates	120
5.3.1 Radio-telemetry	120
5.3.2 Capture–recapture/resighting	124
5.3.3 Band recovery	127
5.4 Movement	129
5.4.1 Radio-telemetry	129
5.4.2 Capture–recapture/resighting	131
5.4.3 Band recovery	133
5.5 Summary and general recommendations	134
<b>6. Radio-tagging</b>	<b>141</b>
<i>Robert Kenward</i>	
6.1 Introduction	141
6.2 Choice of techniques	142
6.2.1 Constraints on radio tagging	142
6.2.2 Applications and advantages	143
6.2.3 Considerations for tag attachment	145
6.3 Forward planning	148
6.3.1 Equipment	148
6.3.2 Mobile tracking	150
6.3.3 Software	150
6.4 Approaches	151
6.4.1 Pilot studies	151
6.4.2 Recording locations	152
6.4.3 Using location data	154
6.4.4 Demography	155
6.5 The future	156
<b>7. Migration</b>	<b>161</b>
<i>Susanne Åkesson and Anders Hedenström</i>	
7.1 Introduction	161
7.2 Migration systems	161
7.2.1 Mark-recapture	162
7.2.2 Morphology	162
7.2.3 Genetic markers	163
7.2.4 Stable isotopes	163
7.3 Migration behavior and strategies	165
7.3.1 Counting and observing migrants	165

7.3.2	<i>Tracking migrants</i>	166
7.3.3	<i>Remote sensing: infrared device</i>	167
7.3.4	<i>Remote sensing: radar</i>	167
7.3.5	<i>Stopover</i>	169
7.4	Physiology of migration	169
7.4.1	<i>Body composition</i>	169
7.4.2	<i>Energetics</i>	170
7.4.3	<i>Endocrinology</i>	171
7.5	Flight in wind tunnels	171
7.6	Orientation and navigation	172
7.6.1	<i>Emlen funnels</i>	172
7.6.2	<i>Manipulating sensory input</i>	172
7.6.3	<i>Displacement experiments</i>	173
7.6.4	<i>Selection experiments</i>	174
7.6.5	<i>Circular statistics</i>	174
7.7	Modeling migration	175
7.8	Concluding remarks	176

## **8. Information from dead and dying birds** **179**

*John E. Cooper*

8.1	Introduction	179
8.1.1	<i>Terminology—definitions and explanation</i>	181
8.1.2	<i>Methodology—an overview of techniques</i>	181
8.2	The <i>postmortem</i> examination	183
8.3	Health and safety	185
8.4	<i>Postmortem</i> examinations (necropsies)	187
8.5	Laboratory investigations	194
8.6	Interpretation of findings	199
8.7	Legal aspects	201
8.8	Conclusions	203

## **9. Techniques in physiology and genetics** **211**

*Alistair Dawson*

9.1	Introduction	211
9.2	Sampling techniques	211
9.2.1	<i>Ethical considerations</i>	211
9.2.2	<i>Legal considerations—catching wild birds for research</i>	212
9.2.3	<i>Legal considerations—scientific experiments on birds</i>	213
9.2.4	<i>Housing and husbandry</i>	216
9.2.5	<i>Blood sampling</i>	217
9.2.6	<i>Administration of substances</i>	218
9.2.7	<i>Anesthesia</i>	219

9.2.8	<i>Implants</i>	219
9.2.9	<i>Laparotomy</i>	220
9.3	<i>Ecotoxicology</i>	221
9.4	<i>Endocrinology</i>	222
9.5	<i>Energetics</i>	224
9.6	<i>Molecular genetics</i>	225
<b>10.</b>	<b>Diet and foraging behavior</b>	<b>233</b>
	<i>William J. Sutherland</i>	
10.1	<i>Introduction</i>	233
10.2	<i>Diet composition</i>	233
10.2.1	<i>Direct observation</i>	233
10.2.2	<i>Nest observations</i>	235
10.2.3	<i>Remains and signs</i>	235
10.2.4	<i>Dropping analysis</i>	236
10.2.5	<i>Pellet analysis</i>	239
10.2.6	<i>Stomach analysis</i>	239
10.2.7	<i>Direct observations of crop</i>	240
10.2.8	<i>Regurgitates</i>	240
10.2.9	<i>Cafeteria experiments</i>	240
10.2.10	<i>Morphology</i>	240
10.2.11	<i>Neck ligatures</i>	241
10.2.12	<i>Emetics and flushing</i>	241
10.2.13	<i>Isotope differences between habitats</i>	241
10.3	<i>Determining prey size</i>	242
10.3.1	<i>Direct observation of prey size</i>	242
10.3.2	<i>Determining size from prey remains</i>	242
10.3.3	<i>Determining prey size from regurgitates</i>	242
10.3.4	<i>Measuring fragments in pellets, droppings, or stomach</i>	242
10.4	<i>Prey quality</i>	243
10.4.1	<i>Energy content</i>	243
10.4.2	<i>Prey digestibility</i>	244
10.5	<i>Foraging behavior</i>	244
10.5.1	<i>Time budgets</i>	244
10.5.2	<i>Time spent feeding per day</i>	245
10.5.3	<i>Night observations</i>	245
10.5.4	<i>Handling time</i>	246
10.5.5	<i>Intake rate and the functional response</i>	246
10.5.6	<i>Interference</i>	247
10.5.7	<i>Depletion</i>	247
10.5.8	<i>Prey availability</i>	248
10.5.9	<i>Exclosures</i>	248
10.5.10	<i>Mate provisioning and brood provisioning rates</i>	249

<b>11. Habitat assessment</b>	<b>251</b>
<i>William J. Sutherland and Rhys E. Green</i>	
11.1 Introduction	251
11.1.1 <i>Habitat associations</i>	251
11.1.2 <i>Documenting changes over time</i>	252
11.2 Protocols	252
11.3 Physical environment	254
11.3.1 <i>Temperature and thermoregulation</i>	254
11.3.2 <i>Rainfall and soil wetness</i>	255
11.3.3 <i>Slope, aspect, elevation, and topography</i>	255
11.3.4 <i>Type, chemistry, and penetrability of soils</i>	255
11.3.5 <i>Water chemistry</i>	256
11.4 Vegetation	257
11.4.1 <i>Mapping of broad habitat types</i>	257
11.4.2 <i>Species composition of vegetation</i>	258
11.4.3 <i>Vegetation architecture</i>	258
11.5 Quantifying habitat selection	260
11.5.1 <i>Comparing the relative abundance of birds or records of tracked birds in each of several habitats with the relative areas of the habitats available</i>	260
11.5.2 <i>Relating numbers or densities of individuals or records of tracked birds in spatial units to the habitat composition of those units</i>	262
11.5.3 <i>Comparison of habitat at places used by birds with that at places that are representative of the study area or known to be unused</i>	262
11.6 Food abundance and availability	263
11.7 Predator abundance	265
11.8 Disturbance	266
<b>12. Conservation management of endangered birds</b>	<b>269</b>
<i>Carl G. Jones</i>	
12.1 Introduction	269
12.2 Process in the restoration of endangered species	269
12.2.1 <i>Step one: know your species</i>	270
12.2.2 <i>Step two: diagnose causes of population decline and test remedial action</i>	270
12.2.3 <i>Stage three: intensive management</i>	271
12.2.4 <i>Stage four: population management</i>	271
12.2.5 <i>Stage five: monitoring</i>	271
12.3 Broad population management approaches	272
12.3.1 <i>Supplemental feeding</i>	273
12.3.2 <i>Enhancing nest-sites and the provision of nest-boxes</i>	274

12.3.3	<i>Disease control</i>	277
12.3.4	<i>Predator control</i>	278
12.4	Intensive management of focal pairs	280
12.4.1	<i>Close guarding and monitoring of nests</i>	280
12.4.2	<i>Clutch and brood manipulations</i>	281
12.5	Reintroduction and translocations	288
12.5.1	<i>Reintroduction</i>	288
12.5.2	<i>Translocations</i>	290
12.6	Supportive management for bird restoration projects	291
12.6.1	<i>Role of captive facilities</i>	291
12.6.2	<i>Model or surrogate species</i>	292
12.6.3	<i>Artificial incubation and hand-rearing</i>	292
12.7	Integrated management	293
12.8	Discussion	293
<b>13.</b>	<b>Exploitation</b>	<b>303</b>
	<i>Michael C. Runge, William L. Kendall, and James D. Nichols</i>	
13.1	Introduction: assessment of exploitation	303
13.1.1	<i>Taking a conservative approach</i>	303
13.1.2	<i>Minimum estimates of population size</i>	303
13.1.3	<i>Estimates of harvest levels</i>	304
13.1.4	<i>Population models and associated parameters</i>	304
13.1.5	<i>The use of trends</i>	304
13.2	Theoretical basis for sustainable exploitation	305
13.2.1	<i>Logistic growth model with perfect information</i>	305
13.2.2	<i>Incorporating uncertainty: potential biological removal</i>	307
13.2.3	<i>A note about other methods of assessing sustainability</i>	309
13.3	Harvest control and management objectives	310
13.3.1	<i>Harvest management strategies</i>	310
13.3.2	<i>Harvest management objectives</i>	311
13.4	Assessing harvest levels	312
13.4.1	<i>Total harvest (H) versus harvest rate (h)</i>	312
13.4.2	<i>Harvest estimation when harvest is legal and observable</i>	312
13.4.3	<i>Harvest estimation when harvest is illegal</i>	314
13.4.4	<i>Measuring harvest rate</i>	315
13.5	Assessing population size	316
13.5.1	<i>Overview</i>	316
13.5.2	<i>Coping with uncertainty</i>	316
13.6	Assessing population dynamics	317
13.6.1	<i>Maximum growth rate (<math>r_{max}</math>)</i>	317
13.6.2	<i>Other aspects of density dependence</i>	318
13.6.3	<i>Other driving forces</i>	320
13.6.4	<i>Model structure</i>	320

13.7	Addressing uncertainty	322
13.7.1	Motivation	322
13.7.2	Management experiments	322
13.7.3	Adaptive management	323

## 14. Habitat management 329

Malcolm Ausden

14.1	Introduction	329
14.2	Deciding what to do	330
14.3	Monitoring	333
14.4	General principles of managing habitats for birds	334
14.4.1	Factors influencing habitat use by birds	334
14.4.2	Taking account of the requirements of non-bird species	335
14.4.3	Controlling unwanted plants	336
14.4.4	Taking account of predicted climate change	337
14.5	Managing grasslands	337
14.5.1	Introduction	337
14.5.2	Effects of cutting and burning on sward condition	338
14.5.3	Effects of grazing on sward condition	339
14.5.4	Minimizing nest and chick loss during management	341
14.5.5	Using fertilizer	342
14.5.6	Hydrology of wet grasslands	343
14.6	Managing dwarf shrub habitats	344
14.7	Managing forests and scrub	345
14.7.1	Introduction	345
14.7.2	Grazing and browsing	347
14.7.3	Burning	348
14.7.4	Planting and harvesting regimes	349
14.7.5	Thinning and creating gaps	350
14.7.6	Increasing the quantity of dead wood	351
14.8	Managing deep water	351
14.9	Managing wetlands	352
14.9.1	Manipulating the proportions of open water, ruderal vegetation, and swamp	352
14.9.2	Increasing food abundance for birds in shallow freshwater	353
14.9.3	Increasing food abundance for birds in shallow brackish and saline water	355
14.9.4	Increasing accessibility of food for birds in shallow water	356
14.9.5	Providing islands and rafts	357
14.9.6	Managing reedbeds	357
14.9.7	Scrub	360
14.9.8	Wet woodlands	360
14.10	Managing intertidal habitats	360
14.11	Managing arable land and hedgerows	361
14.12	Conclusions	362
