Preface

xvii

How to use this book

xix

I Programming

1 Setting up

3

- 1.1 Installing R
- 1.2 Starting R
- 1.3 Working directory
- 1.4 Writing scripts
- 1.5 Help
- 1.6 Supporting material

3
3
4
5
5
6

2 R as a calculating environment

11

- 2.1 Arithmetic
- 2.2 Variables
- 2.3 Functions
- 2.4 Vectors
- 2.5 Missing data: NA
- 2.6 Expressions and assignments
- 2.7 Logical expressions
- 2.8 Matrices
- 2.9 The workspace
- 2.10 Exercises

3	Basic programming	29
3.1	Introduction	29
3.2	Branching with if	31
3.3	Looping with for	33
3.4	Looping with while	37
3.5	Vector-based programming	39
3.6	Program flow	40
3.7	Basic debugging	41
3.8	Good programming habits	43
3.9	Exercises	43
4	I/O: Input and output	49
4.1	Text	49
4.2	Input from a file	51
4.3	Input from the keyboard	53
4.4	Output to a file	55
4.5	Plotting	56
4.6	Exercises	58
5	Programming with functions	61
5.1	Functions	61
5.2	Scope and its consequences	66
5.3	Arguments	68
5.4	Vector-based programming using functions	71
5.5	Recursive programming	74
5.6	Debugging functions	77
5.7	Exercises	79
6	Sophisticated data structures	87
6.1	Factors	87
6.2	Dataframes	90
6.3	Lists	97
6.4	The apply family	101
6.5	Exercises	108

7 Better graphics	113
7.1 Introduction	113
7.2 Graphics parameters: par	115
7.3 Graphical augmentation	117
7.4 Mathematical typesetting	120
7.5 Permanence	122
7.6 Grouped graphs: lattice	123
7.7 3D plots	127
7.8 Exercises	129
8 Pointers to further programming techniques	131
8.1 Packages	131
8.2 Frames and environments	137
8.3 Debugging again	139
8.4 Identifying bottlenecks	141
8.5 Object-oriented programming: S3	142
8.6 Object-oriented programming: S4	148
8.7 Manipulation of data	150
8.8 Compiled code	157
8.9 Further reading	159
8.10 Exercises	160
II Numerical techniques	161
9 Numerical accuracy and program efficiency	163
9.1 Machine representation of numbers	163
9.2 Significant digits	166
9.3 Time	168
9.4 Loops versus vectors	170
9.5 Parallel processing	172
9.6 Memory	174
9.7 Caveat	176
9.8 Exercises	176

10 Root-finding	181
10.1 Introduction	181
10.2 Fixed-point iteration	182
10.3 The Newton–Raphson method	187
10.4 The secant method	190
10.5 The bisection method	192
10.6 Exercises	195
11 Numerical integration	203
11.1 Trapezoidal rule	203
11.2 Simpson’s rule	205
11.3 Adaptive quadrature	210
11.4 Exercises	214
12 Optimisation	219
12.1 Newton’s method for optimisation	220
12.2 The golden-section method	222
12.3 Multivariate optimisation	225
12.4 Steepest ascent	227
12.5 Newton’s method in higher dimensions	230
12.6 Optimisation in R and the wider world	236
12.7 A curve-fitting example	237
12.8 Exercises	238
13 Systems of ordinary differential equations	245
13.1 Euler’s method	247
13.2 Midpoint method	249
13.3 Fourth-order Runge–Kutta	251
13.4 Efficiency	253
13.5 Adaptive step size	256
13.6 Exercises	265

CONTENTS	xiii
III Probability and statistics	269
14 Probability	271
14.1 The probability axioms	271
14.2 Conditional probability	274
14.3 Independence	276
14.4 The Law of Total Probability	277
14.5 Bayes' theorem	278
14.6 Exercises	279
15 Random variables	285
15.1 Definition and distribution function	285
15.2 Discrete and continuous random variables	286
15.3 Empirical cdf's and histograms	289
15.4 Expectation and finite approximations	290
15.5 Transformations	295
15.6 Variance and standard deviation	300
15.7 The Weak Law of Large Numbers	301
15.8 Exercises	305
16 Discrete random variables	311
16.1 Discrete random variables in \mathbb{R}	311
16.2 Bernoulli distribution	312
16.3 Binomial distribution	312
16.4 Geometric distribution	314
16.5 Negative binomial distribution	317
16.6 Poisson distribution	318
16.7 Exercises	321

17 Continuous random variables	325
17.1 Continuous random variables in \mathbb{R}	325
17.2 Uniform distribution	326
17.3 Lifetime models: exponential and Weibull	326
17.4 The Poisson process and the gamma distribution	331
17.5 Sampling distributions: normal, χ^2 , and t	336
17.6 Exercises	342
18 Parameter estimation	347
18.1 Point estimation	347
18.2 The Central Limit Theorem	353
18.3 Confidence intervals	358
18.4 Monte Carlo confidence intervals	365
18.5 Exercises	367
19 Markov chains	373
19.1 Introduction to discrete time chains	373
19.2 Basic formulae: discrete time	377
19.3 Classification of states	385
19.4 Limiting behaviour: discrete time	390
19.5 Finite absorbing chains	395
19.6 Introduction to continuous time chains	400
19.7 Rate matrix and associated equations	408
19.8 Limiting behaviour: continuous time	411
19.9 Defining the state space	413
19.10 Simulation	416
19.11 Estimation	422
19.12 Estimating the mean of the limiting distribution	426
19.13 Exercises	434

CONTENTS	xv
IV Simulation	441
20 Simulation	443
20.1 Simulating iid uniform samples	443
20.2 Simulating discrete random variables	445
20.3 Inversion method for continuous rv	450
20.4 Rejection method for continuous rv	452
20.5 Simulating normals	458
20.6 Exercises	461
21 Monte Carlo integration	467
21.1 Hit-and-miss method	467
21.2 (Improved) Monte Carlo integration	470
21.3 Exercises	472
22 Variance reduction	475
22.1 Antithetic sampling	475
22.2 Importance sampling	479
22.3 Control variates	484
22.4 Exercises	486
23 Case studies	489
23.1 Introduction	489
23.2 Epidemics	490
23.3 Inventory	502
23.4 Seed dispersal	517
24 Student projects	533
24.1 The level of a dam	533
24.2 Runoff down a slope	537
24.3 Roulette	542
24.4 Buffon's needle and cross	545

24.5	The pipe spiders of Brunswick	547
24.6	Insurance risk	553
24.7	Squash	556
24.8	Stock prices	561
24.9	Conserving water	563
Glossary of R commands		569
Programs and functions developed in the text		575
Index		577
