<i>Preface</i>	vii	III.3 Theory of Selection in Populations	208
<i>Contributors</i>	ix	III.4 Kin Selection and Inclusive Fitness	217
<b>Section I Introduction</b>	<b>1</b>	III.5 Phenotypic Selection on Quantitative Traits	223
I.1 What Is Evolution?	3	III.6 Responses to Selection: Experimental Populations	232
I.2 The History of Evolutionary Thought	10	III.7 Responses to Selection: Natural Populations	240
I.3 The Evidence for Evolution	28	III.8 Evolutionary Limits and Constraints	249
I.4 From DNA to Phenotypes	40	III.9 Evolution of Modifier Genes and Biological Systems	255
<b>Section II Phylogenetics and the History of Life</b>	<b>47</b>	III.10 Evolution of Reaction Norms	263
II.1 Interpretation of Phylogenetic Trees	51	III.11 Evolution of Life Histories	270
II.2 Phylogenetic Inference	60	III.12 Evolution of Form and Function	278
II.3 Molecular Clock Dating	67	III.13 Biochemical and Physiological Adaptations	284
II.4 Historical Biogeography	75	III.14 Evolution of the Ecological Niche	290
II.5 Phylogeography	82	III.15 Adaptation to the Biotic Environment	300
II.6 Concepts in Character Macroevolution: Adaptation, Homology, and Evolvability	89	<b>Section IV Evolutionary Processes</b>	<b>307</b>
II.7 Using Phylogenies to Study Phenotypic Evolution: Comparative Methods and Tests of Adaptation	100	IV.1 Genetic Drift	309
II.8 Taxonomy in a Phylogenetic Framework	106	IV.2 Mutation	317
II.9 The Fossil Record	112	IV.3 Geographic Variation, Population Structure, and Migration	323
II.10 The Origin of Life	120	IV.4 Recombination and Sex	330
II.11 Evolution in the Prokaryotic Grade	127	IV.5 Genetic Load	336
II.12 Origin and Diversification of Eukaryotes	136	IV.6 Inbreeding	342
II.13 Major Events in the Evolution of Land Plants	143	IV.7 Selfish Genetic Elements and Genetic Conflict	349
II.14 Major Events in the Evolution of Fungi	152	IV.8 Evolution of Mating Systems: Outcrossing versus Selfing	358
II.15 Origin and Early Evolution of Animals	159	<b>Section V Genes, Genomes, Phenotypes</b>	<b>365</b>
II.16 Major Events in the Evolution of Arthropods	167	V.1 Molecular Evolution	369
II.17 Major Features of Tetrapod Evolution	174	V.2 Genome Evolution	376
II.18 Human Evolution	183	V.3 Comparative Genomics	382
<b>Section III Natural Selection and Adaptation</b>	<b>191</b>	V.4 Evolution of Sex Chromosomes	389
III.1 Natural Selection, Adaptation, and Fitness: Overview	195	V.5 Gene Duplication	399
III.2 Units and Levels of Selection	202	V.6 Evolution of New Genes	408
		V.7 Evolution of Gene Expression	415
		V.8 Epigenetics	422

V.9	Evolution of Molecular Networks	430	VII.6	Sexual Selection: Mate Choice	649
V.10	Evolution and Development: Organisms	438	VII.7	Evolution of Communication	657
V.11	Evolution and Development: Molecules	446	VII.8	Evolution of Parental Care	665
V.12	Genetics of Phenotypic Evolution	454	VII.9	Cooperation and Conflict: Microbes to Humans	673
V.13	Dissection of Complex Trait Evolution	460	VII.10	Cooperative Breeding	679
V.14	Searching for Adaptation in the Genome	468	VII.11	Human Behavioral Ecology	685
V.15	Ancient DNA	477	VII.12	Evolutionary Psychology	692
<b>Section VI</b>	<b>Speciation and Macroevolution</b>	<b>485</b>	VII.13	Evolution of Eusociality	698
VI.1	Species and Speciation	491	VII.14	Cognition: Phylogeny, Adaptation, and By-Products	704
VI.2	Speciation Patterns	498	VII.15	Evolution of Apparently Nonadaptive Behavior	711
VI.3	Geography, Range Evolution, and Speciation	506	VII.16	Aging and Menopause	719
VI.4	Speciation and Natural Selection	514	<b>Section VIII</b>	<b>Evolution and Modern Society</b>	<b>729</b>
VI.5	Speciation and Sexual Selection	522	VIII.1	Evolutionary Medicine	735
VI.6	Gene Flow, Hybridization, and Speciation	531	VIII.2	Evolution of Parasite Virulence	745
VI.7	Coevolution and Speciation	537	VIII.3	Evolution of Antibiotic Resistance	751
VI.8	Genetics of Speciation	545	VIII.4	Evolution and Microbial Forensics	758
VI.9	Speciation and Genome Evolution	551	VIII.5	Domestication and the Evolution of Agriculture	764
VI.10	Adaptive Radiation	561	VIII.6	Evolution and Conservation	770
VI.11	Macroevolutionary Rates	569	VIII.7	Directed Evolution	778
VI.12	Macroevolutionary Trends	575	VIII.8	Evolution and Computing	785
VI.13	Causes and Consequences of Extinction	581	VIII.9	Linguistics and the Evolution of Human Language	791
VI.14	Species Selection	588	VIII.10	Cultural Evolution	800
VI.15	Key Evolutionary Innovations	594	VIII.11	Evolution and Notions of Human Race	807
VI.16	Evolution of Communities	601	VIII.12	The Future of Human Evolution	815
<b>Section VII</b>	<b>Evolution of Behavior, Society, and Humans</b>	<b>607</b>	VIII.13	Evolution and Religion: Conflict and Dialogue	823
VII.1	Genes, Brains, and Behavior	611	VIII.14	Creationism and Intelligent Design	836
VII.2	Evolution of Hormones and Behavior	618	VIII.15	Evolution and the Media	843
VII.3	Game Theory and Behavior	626	<i>Index</i>		849
VII.4	Sexual Selection and Its Impact on Mating Systems	634			
VII.5	Sexual Selection: Male-Male Competition	643
