Preface xi

Acknowledgements xv

Chapter 1	The Composition of Matter	1
1.1	Early Descriptions of Matter	1
1.2	Visualizing Atoms	6
1.3	The Periodic Table	8
1.4	The Standard Model	9
	Exercises	12
	Bibliography	13
Chapter 2	The Structure of the Nucleus	15
2.1	The Nucleus	15
2.2	Nuclear Binding Energies	16
2.3	Nuclear Reactions: Fusion and Fission	17
2.4	Radioactive Decay and the Band of Stability	22
2.5	The Shell Model of the Nucleus	27
2.6	The Origin of the Elements	30
	Exercises	38
	Bibliography	39
Chapter 3	A Brief Review of Quantum Theory	41
3.1	The Wavelike Properties of Light	41
3.2	Problems with the Classical Model of the Atom	48
3.3	The Bohr Model of the Atom	55
3.4	Implications of Wave-Particle Duality	58
3.5	Postulates of Quantum Mechanics	64
3.6	The Schrödinger Equation	67
3.7	The Particle in a Box Problem	70
3.8	The Harmonic Oscillator Problem	75
	Exercises	78
	Bibliography	79
Chapter 4	Atomic Structure	81
4.1	The Hydrogen Atom	81
4.1.1	The Radial Wave Functions	82
4.1.2	The Angular Wave Functions	86
4.2	Polyelectronic Atoms	91
4.3	Electron Spin and the Pauli Principle	93
4.4	Electron Configurations and the Periodic Table	96
4.5	Atomic Term Symbols	98

	4.5.1	Extracting Term Symbols Using Russell–Saunders Coupling	100
	4.5.2	Extracting Term Symbols Using jj Coupling	102
	4.5.3	Correlation Between RS (LS) Coupling and jj Coupling	104
	4.6	Shielding and Effective Nuclear Charge	105
		Exercises	107
		Bibliography	108
Chapter 5	 	Periodic Properties of the Elements	109
	5.1	The Modern Periodic Table	109
	5.2	Radius	111
	5.3	Ionization Energy	118
	5.4	Electron Affinity	121
	5.5	The Uniqueness Principle	122
	5.6	Diagonal Properties	124
	5.7	The Metal–Nonmetal Line	125
	5.8	Standard Reduction Potentials	126
	5.9	The Inert-Pair Effect	129
	5.10	Relativistic Effects	130
	5.11	Electronegativity	133
		Exercises	136
		Bibliography	137
Chapter 6	 	An Introduction to Chemical Bonding	139
	6.1	The Bonding in Molecular Hydrogen	139
	6.2	Lewis Structures	140
	6.3	Covalent Bond Lengths and Bond Dissociation Energies	144
	6.4	Resonance	146
	6.5	Polar Covalent Bonding	149
		Exercises	153
		Bibliography	154
Chapter 7	 	Molecular Geometry	155
	7.1	The VSEPR Model	155
	7.2	The Ligand Close-Packing Model	170
	7.3	A Comparison of the VSEPR and LCP Models	175
		Exercises	176
		Bibliography	177
Chapter 8	 	Molecular Symmetry	179
	8.1	Symmetry Elements and Symmetry Operations	179
	8.1.1	Identity, E	180
	8.1.2	Proper Rotation, C_n	181
	8.1.3	Reflection, σ	182
	8.1.4	Inversion, i	183
	8.1.5	Improper Rotation, S_n	183
	8.2	Symmetry Groups	186
	8.3	Molecular Point Groups	191
	8.4	Representations	195
	8.5	Character Tables	202
	8.6	Direct Products	209
	8.7	Reducible Representations	214
		Exercises	222
		Bibliography	224

Chapter 9	Vibrational Spectroscopy	227
	9.1 Overview of Vibrational Spectroscopy	227
	9.2 Selection Rules for IR and Raman-Active Vibrational Modes	231
	9.3 Determining the Symmetries of the Normal Modes of Vibration	235
	9.4 Generating Symmetry Coordinates Using the Projection Operator Method	243
	9.5 Resonance Raman Spectroscopy	252
	Exercises	256
	Bibliography	258
Chapter 10	Covalent Bonding	259
	10.1 Valence Bond Theory	259
	10.2 Molecular Orbital Theory: Diatomics	278
	10.3 Molecular Orbital Theory: Polyatomics	292
	10.4 Molecular Orbital Theory: π Orbitals	305
	10.5 Molecular Orbital Theory: More Complex Examples	317
	10.6 Borane and Carborane Cluster Compounds	325
	Exercises	334
	Bibliography	336
Chapter 11	Metallic Bonding	339
	11.1 Crystalline Lattices	339
	11.2 X-Ray Diffraction	345
	11.3 Closest-Packed Structures	350
	11.4 The Free Electron Model of Metallic Bonding	355
	11.5 Band Theory of Solids	360
	11.6 Conductivity in Solids	374
	11.7 Connections Between Solids and Discrete Molecules	383
	Exercises	384
	Bibliography	388
Chapter 12	Ionic Bonding	391
	12.1 Common Types of Ionic Solids	391
	12.2 Lattice Enthalpies and the Born–Haber Cycle	398
	12.3 Ionic Radii and Pauling’s Rules	404
	12.4 The Silicates	417
	12.5 Zeolites	422
	12.6 Defects in Crystals	423
	Exercises	426
	Bibliography	428
Chapter 13	Structure and Bonding	431
	13.1 A Reexamination of Crystalline Solids	431
	13.2 Intermediate Types of Bonding in Solids	434
	13.3 Quantum Theory of Atoms in Molecules (QTAIM)	443
	Exercises	449
	Bibliography	452
Chapter 14	Structure and Reactivity	453
	14.1 An Overview of Chemical Reactivity	453
	14.2 Acid–Base Reactions	455
	14.3 Frontier Molecular Orbital Theory	467

	14.4 Oxidation–Reduction Reactions	473	
	14.5 A Generalized View of Molecular Reactivity	475	
	Exercises	480	
	Bibliography	481	
Chapter 15	An Introduction to Coordination Compounds		483
	15.1 A Historical Overview of Coordination Chemistry	483	
	15.2 Types of Ligands and Nomenclature	487	
	15.3 Stability Constants	490	
	15.4 Coordination Numbers and Geometries	492	
	15.5 Isomerism	498	
	15.6 The Magnetic Properties of Coordination Compounds	501	
	Exercises	506	
	Bibliography	508	
Chapter 16	Structure, Bonding, and Spectroscopy of Coordination Compounds		509
	16.1 Valence Bond Model	509	
	16.2 Crystal Field Theory	512	
	16.3 Ligand Field Theory	525	
	16.4 The Angular Overlap Method	534	
	16.5 Molecular Term Symbols	541	
	16.5.1 Scenario 1—All the Orbitals are Completely Occupied	546	
	16.5.2 Scenario 2—There is a Single Unpaired Electron in One of the Orbitals	546	
	16.5.3 Scenario 3—There are Two Unpaired Electrons in Two Different Orbitals	546	
	16.5.4 Scenario 4—A Degenerate Orbital is Lacking a Single Electron	547	
	16.5.5 Scenario 5—There are Two Electrons in a Degenerate Orbital	547	
	16.5.6 Scenario 6—There are Three Electrons in a Triply Degenerate Orbital	547	
	16.6 Tanabe–Sugano Diagrams	549	
	16.7 Electronic Spectroscopy of Coordination Compounds	554	
	16.8 The Jahn–Teller Effect	564	
	Exercises	566	
	Bibliography	570	
Chapter 17	Reactions of Coordination Compounds		573
	17.1 Kinetics Overview	573	
	17.2 Octahedral Substitution Reactions	577	
	17.2.1 Associative (A) Mechanism	578	
	17.2.2 Interchange (I) Mechanism	579	
	17.2.3 Dissociative (D) Mechanism	580	
	17.3 Square Planar Substitution Reactions	585	
	17.4 Electron Transfer Reactions	593	
	17.5 Inorganic Photochemistry	606	
	17.5.1 Photochemistry of Chromium(III) Ammine Compounds	607	
	17.5.2 Light-Induced Excited State Spin Trapping in Iron(II) Compounds	611	
	17.5.3 MLCT Photochemistry in Pentaammineruthenium(II) Compounds	615	
	17.5.4 Photochemistry and Photophysics of Ruthenium(II) Polypyridyl Compounds	617	
	Exercises	622	
	Bibliography	624	
Chapter 18	Structure and Bonding in Organometallic Compounds		627
	18.1 Introduction to Organometallic Chemistry	627	
	18.2 Electron Counting and the 18-Electron Rule	628	

18.3	Carbonyl Ligands	631	
18.4	Nitrosyl Ligands	635	
18.5	Hydride and Dihydrogen Ligands	638	
18.6	Phosphine Ligands	640	
18.7	Ethylene and Related Ligands	641	
18.8	Cyclopentadiene and Related Ligands	645	
18.9	Carbenes, Carbynes, and Carbidos	648	
	Exercises	651	
	Bibliography	654	
Chapter 19	Reactions of Organometallic Compounds		655
19.1	Some General Principles	655	
19.2	Organometallic Reactions Involving Changes at the Metal	656	
19.2.1	Ligand Substitution Reactions	656	
19.2.2	Oxidative Addition and Reductive Elimination	658	
19.3	Organometallic Reactions Involving Changes at the Ligand	664	
19.3.1	Insertion and Elimination Reactions	664	
19.3.2	Nucleophilic Attack on the Ligands	667	
19.3.3	Electrophilic Attack on the Ligands	669	
19.4	Metathesis Reactions	670	
19.4.1	π -Bond Metathesis	670	
19.4.2	Ziegler–Natta Polymerization of Alkenes	671	
19.4.3	σ -Bond Metathesis	671	
19.5	Commercial Catalytic Processes	674	
19.5.1	Catalytic Hydrogenation	674	
19.5.2	Hydroformylation	674	
19.5.3	Wacker–Smidt Process	676	
19.5.4	Monsanto Acetic Acid Process	677	
19.6	Organometallic Photochemistry	678	
19.6.1	Photosubstitution of CO	678	
19.6.2	Photoinduced Cleavage of Metal–Metal Bonds	680	
19.6.3	Photochemistry of Metallocenes	682	
19.7	The Isolobal Analogy and Metal–Metal Bonding in Organometallic Clusters	683	
	Exercises	689	
	Bibliography	691	
Appendix: A	Derivation of the Classical Wave Equation		693
	Bibliography	694	
Appendix: B	Character Tables		695
	Bibliography	708	
Appendix: C	Direct Product Tables		709
	Bibliography	713	
Appendix: D	Correlation Tables		715
	Bibliography	721	
Appendix: E	The 230 Space Groups		723
	Bibliography	728	
Index			729
