FOREWORD	xi
PREFACE	xiii
ACKNOWLEDGMENTS	xvii
1. A Collection of Basic Concepts	1
1.1 Nucleophiles and Electrophiles: The S _N 2 Paradigm	2
1.2 What Makes for a Good Nucleophile?	5
1.3 Hard and Soft Acids and Bases: The HSAB Principle	8
1.4 pK _a Values: What Makes for a Good Leaving Group?	9
1.5 Redox Potentials	11
1.6 Thermodynamic Control: Bond Dissociation Energies (BDEs)	11
1.7 Bimolecular β-Elimination (E2)	14
1.8 Proton Transfers (PTs)	15
1.9 Elementary Associative and Dissociative Processes (A and D)	16
1.10 Two-Step Ionic Mechanisms: The S _N 2-Si Pathway	19
1.11 Two-Step Ionic Mechanisms: The S _N 1 and E1 Pathways	20
1.12 Electrophilic Addition to Carbon–Carbon Multiple Bonds	22
1.13 Electrophilic Substitution on Aromatics: Addition–Elimination	23
1.14 Nucleophilic Addition to Carbon–Heteroatom Multiple Bonds	24
1.15 Carbanions and Related Synthetic Intermediates	26
1.16 Carbenes	29
1.17 Oxidative Additions and Reductive Eliminations	30

Sections marked with an asterisk (*) may be skipped on first reading.

1.18 Migrations	32
1.19 Ligand Exchange Reactions	33
1.20 Radical Reactions	35
1.21 Pericyclic Reactions	37
1.22 Arrow Pushing: Organic Paradigms	38
1.23 Inorganic Arrow Pushing: Thinking Like a Lone Pair	38
1.24 Definitions: Valence, Oxidation State, Formal Charge, and Coordination Number	40
1.25 Elements of Bonding in Hypervalent Compounds	41
1.26 The λ Convention	45
1.27 The Inert Pair Effect	46
1.28 Summary	47
Further Reading	48
2. The s-Block Elements: Alkali and Alkaline Earth Metals	50
2.1 Solubility	51
2.2 The s-Block Metals as Reducing Agents	52
2.3 Reductive Couplings	53
2.4 Dissolving Metal Reactions	56
2.5 Organolithium and Organomagnesium Compounds	58
2.6 Dihydrogen Activation by Frustrated Lewis Pairs (FLPs)	61
2.7 A Mg^I - Mg^I Bond	63
2.8 Summary	64
Further Reading	65
3. Group 13 Elements	66
3.1 Group 13 Compounds as Lewis Acids	67
3.2 Hydroboration	70
3.3 Group 13-Based Reducing Agents	73
3.4 From Borazine to Gallium Arsenide: 13–15 Compounds	76
3.5 Low-Oxidation-State Compounds	80
3.6 The Boryl Anion	87
3.7 Indium-Mediated Allylations	88
3.8 Thallium Reagents	89
3.9 Summary	94
Further Reading	94
4. Group 14 Elements	96
4.1 Silyl Protecting Groups	98
4.2 A Case Study: Peterson Olefination	103
4.3 Silanes	104

4.4	The β -Silicon Effect: Allylsilanes	106
4.5	Silyl Anions	109
4.6	Organostannanes	112
4.7	Polystannanes	113
4.8*	Carbene and Alkene Analogs	115
4.9*	Alkyne Analogs	120
4.10	Silyl Cations	122
4.11	Glycol Cleavage by Lead Tetraacetate	124
4.12	Summary	127
	Further Reading	128
5A.	Nitrogen	129
5A.1	Ammonia and Some Other Common Nitrogen Nucleophiles	130
5A.2	Some Common Nitrogen Electrophiles: Oxides, Oxoacids, and Oxoanions	131
5A.3	N–N Bonded Molecules: Synthesis of Hydrazine	133
5A.4	Multiple Bond Formation: Synthesis of Sodium Azide	135
5A.5	Thermal Decomposition of NH_4NO_2 and NH_4NO_3	137
5A.6	Diazonium Salts	138
5A.7	Azo Compounds and Diazene	140
5A.8*	Imines and Related Functional Groups: The Wolff–Kishner Reduction and the Shapiro Reaction	144
5A.9	Diazo Compounds	146
5A.10	Nitrenes and Nitrenoids: The Curtius Rearrangement	149
5A.11	Nitric Oxide and Nitrogen Dioxide	151
5A.12	Summary	155
	Further Reading	155
5B.	The Heavier Pnictogens	156
5B.1	Oxides	158
5B.2	Halides and Oxohalides	160
5B.3	Phosphorus in Biology: Why Nature Chose Phosphate	163
5B.4	Arsenic-Based DNA	166
5B.5	Arsenic Toxicity and Biomethylation	168
5B.6	Alkali-Induced Disproportionation of Phosphorus	171
5B.7	Disproportionation of Hypophosphorous Acid	173
5B.8	The Arbuzov Reaction	175
5B.9	The Wittig and Related Reactions: Phosphorus Ylides	176
5B.10	Phosphazenes	180
5B.11*	The Corey–Winter Olefination	185
5B.12	Triphenylphosphine-Mediated Halogenations	187

5B.13*	The Mitsunobu Reaction	188
5B.14*	The Vilsmeier–Haack Reaction	191
5B.15	SbF ₅ and Superacids	193
5B.16	Bismuth in Organic Synthesis: Green Chemistry	195
5B.17	Summary	200
	Further Reading	200
6.	Group 16 Elements: The Chalcogens	202
6.1	The Divalent State: Focus on Sulfur	204
6.2	The Divalent State: Hydrogen Peroxide	205
6.3	S ₂ Cl ₂ and SCl ₂	209
6.4	Nucleophilic Breakdown of Cyclopolysulfur Rings	211
6.5	Cyclooctachalcogen Ring Formation	213
6.6	Higher-Valent States: Oxides and Oxoacids	215
6.7	Sulfur Oxochlorides	219
6.8	Ozone	222
6.9	Swern and Related Oxidations	226
6.10	Sulfur Ylides and Sulfur-Stabilized Carbanions	228
6.11*	Hydrolysis of S ₂ F ₂ : A Mechanistic Puzzle	231
6.12	Higher-Valent Sulfur Fluorides	234
6.13	Martin Sulfurane	236
6.14	Lawesson's Reagent	238
6.15	Sulfur Nitrides	240
6.16*	Selenium-Mediated Oxidations	243
6.17	Higher-Valent Tellurium: A Mechanistic Puzzle	247
6.18	Summary	250
	Further Reading	251
7.	The Halogens	252
7.1	Some Notes on Elemental Halogens	254
7.2	Alkali-Induced Disproportionation of Molecular Halogens	258
7.3	Acid-Induced Comproportionation of Halate and Halide	260
7.4	Hypofluorous Acid, HOF	261
7.5	Electrophilic Fluorinating Agents: <i>N</i> -Fluoro Compounds	264
7.6	Oxoacids and Oxoanions	268
7.7	Heptavalent Chlorine	271
7.8	Interhalogen Compounds	275
7.9*	Halogens in Organic Synthesis: Some Classical Reactions	276
7.10	An Introduction to Higher-Valent Organoiodine Compounds	283
7.11	λ ³ -Iodanes	284
7.12	λ ⁵ -Iodanes: IBX and Dess–Martin Periodinane	288

7.13 Periodic Acid Oxidations	290
7.14 Bromine Trifluoride	291
7.15* Aryl- λ^3 -Bromanes	294
7.16 Summary	298
Further Reading	299
8. The Noble Gases	300
8.1 The Xenon Fluorides: Fluoride Donors and Acceptors	302
8.2 O/F Ligand Exchanges	303
8.3 Xenon Fluorides as F^+ Donors and Oxidants	304
8.4 Hydrolysis of XeF_2 and XeF_4	306
8.5 Xenate and Perxenate	307
8.6 Disproportionation of Xenate	308
8.7 Hydrolysis of XeF_4	310
8.8 Other Compounds Containing Xe–O Bonds	311
8.9 Xe–N Bonds	312
8.10 Xe–C Bonds	313
8.11 Krypton Difluoride	314
8.12 Plus Ultra	316
8.13 Summary	316
Further Reading	316
Epilogue	318
Appendix A. Inorganic Chemistry Textbooks, with a Descriptive-Inorganic Focus	319
A.1 Introductory Texts	319
A.2 Advanced Texts	319
Appendix B. A Short List of Advanced Organic Chemistry Textbooks	320
Index	321
