

41	Analysis of Paint Evidence	Scott G. Ryland and Edward M. Suzuki	41
42	1.5 Introduction		42

43	1.6 Evolution of Analytical Techniques		43
44	1.7 Evolution of Standard Methods		44
45	1.8 Isolating the Residue		45

46	1.9 Initial Sample Evaluation		46
47	1.10 IR Isolation Method Selection		47
48	1.11 Solvent Selection		48
49	1.12 Internal Standards		49
50	1.13 Advantages and Disadvantages of Isolation		50

51	Preface		xv
52	Contributors		xxi

1. Forensic Environmental Chemistry **1**
Anthony Carpi and Andrew J. Schweighardt

53	1.1 Introduction		2
54	1.2 Chemical Fingerprinting		4
55	1.2.1 Hydrocarbon Mixtures		4
56	1.2.2 Polycyclic Aromatic Hydrocarbons		6
57	1.2.3 Biomarkers		11
58	1.2.4 Additives		11
59	1.2.5 Isotopes		12
60	1.2.6 Tracers		13
61	1.2.7 Methods of Detection		16
62	1.2.8 Weathering		18
63	1.3 Spatial Association of Environmental Incidents		18
64	References		20

2. Principles and Issues in Forensic Analysis of Explosives **23**
Jimmie C. Oxley, Maurice Marshall, and Sarah L. Lancaster

65	2.1 Introduction		24
66	2.2 Sample Collection		25
67	2.3 Packaging		29
68	2.4 Sorting		30
69	2.5 Documentation		31
70	2.6 Environmental Control and Monitoring		31
71	2.7 Storage		33
72	2.8 Analysis		33
73	2.9 Records		36
74	2.10 Quality Assurance		36
75	2.11 Safety and Other Issues		37
76	Conclusion		37
77	References		38

3. Analysis of Fire Debris	41
<i>John J. Lentini</i>	
3.1 Introduction	42
3.2 Evolution of Separation Techniques	43
3.3 Evolution of Analytical Techniques	47
3.4 Evolution of Standard Methods	49
3.5 Isolating the Residue	51
3.5.1 Initial Sample Evaluation	51
3.5.2 ILR Isolation Method Selection	51
3.5.3 Solvent Selection	54
3.5.4 Internal Standards	54
3.5.5 Advantages and Disadvantages of Isolation Methods	56
3.6 Analyzing the Isolated ILR	56
3.6.1 Criteria for Identification	63
3.6.2 Improving Sensitivity	90
3.6.3 Estimating the Degree of Evaporation	95
3.6.4 Identity of Source	98
3.7 Reporting Procedures	101
3.8 Record Keeping	102
3.9 Quality Assurance	105
Conclusion	105
References	106
4. Forensic Examination of Soils	109
<i>Raymond C. Murray</i>	
4.1 Introduction	110
4.2 Murder and the Pond	111
4.3 Oil Slicks and Sands	113
4.4 Medical Link	114
4.5 Examination Methods	114
4.5.1 Color	115
4.5.2 Particle-Size Distribution	117
4.5.3 Stereo Binocular Microscope	120
4.5.4 Petrographic Microscope	122
4.5.5 Refractive Index	124
4.5.6 Cathodoluminescence	124
4.5.7 Scanning Electron Microscope	125
4.5.8 X-Ray Diffraction	126
4.6 Chemical Methods	127
4.6.1 FTIR and Raman Spectroscopy	128
4.7 Looking Ahead	129

5. Analysis of Paint Evidence	131
<i>Scott G. Ryland and Edward M. Suzuki</i>	
5.1 Introduction	132
5.2 Paint Chemistry and Color Science	134
5.2.1 Binders	134
5.2.2 Pigments	136
5.3 Types of Paint	139
5.3.1 Automotive Finish Systems	139
5.3.2 Architectural Coatings (Structural Paints or House Paints)	140
5.3.3 Other Coatings	141
5.4 Paint Evidence Interpretation Considerations	141
5.5 Analytical Methods	142
5.5.1 Microscopic Examinations	143
5.5.2 Physical Nature of the Transfer	147
5.5.3 Microscopy	149
5.5.4 Microspectrophotometry	152
5.5.5 Infrared Spectroscopy	158
5.5.6 Raman Spectroscopy	175
5.5.7 Pyrolysis Gas Chromatography and Pyrolysis Gas Chromatography–Mass Spectrometry	178
5.5.8 Elemental Analysis Methods	188
5.5.9 Other Methods	205
5.6 Examples	208
5.6.1 Example 1	208
5.6.2 Example 2	210
5.6.3 Example 3	213
References	217
6. Analysis Techniques Used for the Forensic Examination of Writing and Printing Inks	225
<i>Gerald M. LaPorte and Joseph C. Stephens</i>	
6.1 Introduction	226
6.2 Ink	226
6.2.1 Ink Composition	227
6.3 Ink Analysis	230
6.3.1 Physical Examinations	233
6.3.2 Optical Examinations	236
6.3.3 Chemical Examinations	238
6.3.4 Ink Dating	240
6.4 Office Machine Systems	242
6.4.1 Inkjet Ink	242

6.4.2	Inkjet Ink Analysis	243
6.4.3	Toner Printing	245
6.4.4	Toner Analysis	246
	Conclusion	247
