

# Contents

3.2.5. Methods using a series expansion as an approximation to the exponential integral, starting from the helium one . . . . .	103
3.3. Methods involving a reference temperature or to some other method . . . . .	105
3.4. Non-isothermal differential methods using solid sodium iodate eq. 2 . . . . .	106
3.5. Differential methods . . . . .	106
3.5.1. Methods involving direct use of the basic equation . . . . .	106
3.5.2. Difference-differential methods . . . . .	107
3.5.3. Methods involving a reference temperature . . . . .	107
3.5.4. Methods involving different heating rates: transition to small . . . . .	107
3.5.5. Second moment analysis of the heating curve . . . . .	111
Preface . . . . .	vii
<b>Chapter 1</b>	
Introduction . . . . .	1
1. Characteristic features of decomposition reactions of solids . . . . .	3
2. The literature of solid phase reactions . . . . .	9
3. Scope of the present review and arrangement of subject matter . . . . .	11
4. Classification of chemical reactions of solids . . . . .	12
4.1 Decomposition of a single solid . . . . .	12
4.2 Reactions of types: solid + gas and solid + liquid . . . . .	14
4.3 Solid-solid reactions . . . . .	15
<b>Chapter 2</b>	
Experimental . . . . .	17
1. Accumulatory pressure measurements of evolved gas . . . . .	19
2. Mass loss measurements . . . . .	19
3. Evolved gas analysis (EGA) . . . . .	21
3.1 Mass spectrometry . . . . .	21
3.2 Gas chromatography . . . . .	22
3.3 Other methods of gas analysis . . . . .	23
4. Non-isothermal methods . . . . .	23
5. Absorption or evolution of heat . . . . .	24
6. Computer coupling and data processing . . . . .	24
7. Microscopic techniques . . . . .	24
7.1 Optical microscopy . . . . .	24
7.2 Electron microscopy . . . . .	25
8. Diffraction methods . . . . .	27
9. Surface area measurements . . . . .	28
10. Spectroscopic methods . . . . .	29
10.1 Infrared spectroscopy . . . . .	29
10.2 Mössbauer spectroscopy . . . . .	30
10.3 X-ray photoelectron spectroscopy (XPS or ESCA) . . . . .	30
11. Magnetic measurements . . . . .	31
11.1 Magnetic susceptibility . . . . .	31
11.2 Magnetic resonance . . . . .	31
12. Electrical measurements . . . . .	32
12.1 Electrical conductivity measurements . . . . .	32
12.2 Other electrical measurements . . . . .	32
12.3 Application of electric fields . . . . .	33
13. Sample preparation and pretreatment . . . . .	33
13.1 Sample preparation . . . . .	34
13.2 Dehydration . . . . .	34
13.3 Mechanical treatment . . . . .	34

13.4 Irradiation . . . . .	35
13.5 Controlled addition of impurities . . . . .	35
14. Influence of atmosphere . . . . .	36
15. Experimental methods for studying solid-solid interactions . . . . .	37
 <i>Chapter 3</i>	
Theory of solid state reaction kinetics . . . . .	41
1. Laws of nucleation . . . . .	42
1.1 The nucleus formation process . . . . .	42
1.2 Laws of nucleation . . . . .	45
2. Laws of growth . . . . .	47
3. Formal theories of isothermal solid state decompositions . . . . .	49
3.1 Kinetic expressions derived for interface advance reactions . . . . .	49
3.1.1 Nucleation obeying a power law with constant rate of interface advance (normal growth) . . . . .	50
3.1.2 Random nucleation according to the exponential law followed by normal growth . . . . .	50
3.1.3 Impingement and coalescence of developed nuclei and ingestion of undeveloped nucleation sites . . . . .	51
3.1.4 Rapid and dense nucleation, or initial rapid surface growth, followed by advance of interface from all, or certain specific, surfaces into the bulk of crystallites . . . . .	59
3.1.5 Other models for nucleation and growth of compact nuclei . . . . .	62
3.1.6 General comments . . . . .	64
3.2 Kinetic expressions derived for "chain-type" reactions . . . . .	65
3.3 Kinetic expressions derived for diffusion limited reactions . . . . .	68
3.4 Influence of particle size distribution on kinetic characteristics . . . . .	72
3.5 Rate equations commonly used in kinetic analyses of isothermal reactions of solids . . . . .	72
4. Tests of obedience of isothermal kinetic data to theoretical kinetic equations . . . . .	76
4.1 Introduction . . . . .	76
4.2 Identification of the rate equation . . . . .	77
4.3 Application of rate equations to particular regions of the $\alpha$ -time curve . . . . .	80
4.3.1 The induction period . . . . .	80
4.3.2 The acceleratory region . . . . .	80
4.3.3 The deceleratory region . . . . .	81
4.4 Statistical methods in kinetic analysis . . . . .	81
4.5 Interpretation of kinetic observations . . . . .	84
4.5.1 The zero-order reaction . . . . .	84
4.5.2 Avrami-Erofe'ev equation ( $n = 2$ ) . . . . .	85
5. Variation of reaction rate with temperature . . . . .	86
5.1 Application of the Arrhenius equation to solid state reactions . . . . .	87
5.2 Significance of the Arrhenius parameters . . . . .	88
5.3 Rates of interface reactions . . . . .	92
5.4 The compensation effect . . . . .	95
6. Kinetic investigations using rising temperature techniques . . . . .	97
6.1 Kinetic analysis of non-isothermal rate measurements . . . . .	99
6.2 Integral methods . . . . .	100
6.2.1 Methods using tabulated values of the exponential integral . . . . .	101
6.2.2 Methods using a simple approximation for the exponential integral . . . . .	102

6.2.3	Methods using a series expansion as an approximation for the exponential integral . . . . .	103
6.2.4	Methods involving a reference temperature . . . . .	105
6.2.5	Methods involving different heating rates . . . . .	105
6.3	Differential methods . . . . .	106
6.3.1	Methods involving direct use of the basic equation . . . . .	106
6.3.2	Difference—differential methods . . . . .	107
6.3.3	Methods involving a reference temperature . . . . .	107
6.3.4	Methods involving different heating rates . . . . .	107
7.	The reaction interface . . . . .	109

#### *Chapter 4*

	Decomposition reactions of solids . . . . .	115
1.	Dehydration of crystalline hydrates . . . . .	117
1.1	Structures of crystalline hydrates . . . . .	118
1.2	Kinetics of nucleation and growth during dehydrations . . . . .	120
1.2.1	Nucleation . . . . .	120
1.2.2	Growth . . . . .	121
1.2.3	Shapes of nuclei . . . . .	123
1.2.4	Diffusion-controlled dehydrations . . . . .	123
1.3	The Polanyi—Wigner equation . . . . .	123
1.4	The Smith—Topley effect . . . . .	125
1.5	Kinetics of dehydration of representative crystalline hydrates . . . . .	130
1.5.1	Copper sulphate . . . . .	130
1.5.2	Other sulphates . . . . .	131
1.5.3	Other inorganic solids . . . . .	133
1.5.4	Metal carboxylates . . . . .	134
1.5.5	Conclusions . . . . .	135
2.	Decomposition reactions of binary compounds (also including hydroxides) . . . . .	136
2.1	Hydroxides . . . . .	136
2.1.1	Magnesium hydroxide . . . . .	137
2.1.2	Other inorganic hydroxides . . . . .	138
2.1.3	Hydroxyhalides and related salts . . . . .	140
2.1.4	Clay minerals . . . . .	142
2.2	Oxides . . . . .	144
2.2.1	Extended imperfections in oxides . . . . .	145
2.2.2	Mechanisms and products of oxide decomposition . . . . .	146
2.2.3	Dissociation of oxides . . . . .	146
2.3	Hydrides, carbides, nitrides and related substances . . . . .	151
2.3.1	Decompositions rate-limited by a surface or desorption step: comparable in some respects with heterogeneous catalytic processes . . . . .	152
2.3.2	Reactions rate-limited by an interface process . . . . .	155
2.3.3	Reactions rate-limited by a diffusion process . . . . .	156
2.3.4	Transition metal sulphides . . . . .	156
2.3.5	Related reactions . . . . .	158
2.4	Azides . . . . .	158
2.4.1	Group II azides . . . . .	158
2.4.2	Group IA azides . . . . .	161
2.4.3	Other azides . . . . .	163
2.5	Fulminates and cyanamides . . . . .	165
2.5.1	Fulminates . . . . .	166
2.5.2	Cyanamides . . . . .	166

3.	Decomposition of metal salts of oxyacids	166
3.1	Metal carbonates	167
3.1.1	Calcium carbonate	169
3.1.2	Other Group IIA carbonates	171
3.1.3	Silver carbonate	172
3.1.4	Lead carbonate	173
3.1.5	Manganese(II) carbonate	173
3.1.6	Carbonate decompositions	174
3.2	Metal sulphates	174
3.2.1	Group IIA sulphates	175
3.2.2	Group IIIA sulphates	178
3.2.3	First period transition metal sulphates	178
3.2.4	Other metal sulphates	180
3.2.5	Metal salts of other sulphuroxyacids	180
3.3	Metal nitrates and nitrites	182
3.4	Metal phosphates	184
3.4.1	Group IA phosphates	184
3.4.2	Group IIA phosphates	185
3.4.3	Other metal phosphates	185
3.5	Metal perhalates, halates and halites	185
3.5.1	Perhalates	186
3.5.2	Halates	188
3.5.3	Metal halites	190
3.5.4	General comments	190
3.6	Metal permanganates	191
3.6.1	Potassium permanganate	191
3.6.2	Other Group IA metal permanganates	193
3.6.3	Barium permanganate	193
3.6.4	Silver permanganate	194
3.7	Metal chromates	194
4.	Decompositions of ammonium salts	195
4.1	Ammonium salts containing oxyanions of the non-metals	196
4.1.1	Ammonium perchlorate	196
4.1.2	Ammonium halates	199
4.1.3	Ammonium sulphate	200
4.1.4	Ammonium nitrate	201
4.1.5	Ammonium phosphates	201
4.1.6	Ammonium carbonate	202
4.1.7	Ammonium carboxylates	203
4.2	Ammonium salts containing oxyanions of the metals	203
4.2.1	Ammonium permanganate	203
4.2.2	Ammonium perrhenates	204
4.2.3	Ammonium chromates	205
4.2.4	Ammonium molybdates and tungstates	206
4.2.5	Ammonium vanadates	206
4.2.6	Ammonium uranates	207
4.3	Other ammonium compounds	207
4.3.1	Ammonium azide	207
4.3.2	Ammonium complex salts	208
4.3.3	Ammonium zeolites	208
4.3.4	Ammonium thiocarbamate	208
5.	Decompositions of metal carboxylates	208
5.1	Metal alkanoates	210
5.1.1	Metal formates	210

5.1.2	Metal acetates . . . . .	216
5.1.3	Other metal alkanoates . . . . .	217
5.2	Metal alkandioates and realted compounds . . . . .	218
5.2.1	Metal oxalates . . . . .	218
5.2.2	Metal malonates and succinates . . . . .	224
5.2.3	Metal tartrates . . . . .	225
5.2.4	Metal citrates . . . . .	226
5.2.5	Metal maleates and fumarates . . . . .	226
5.3	Metal salts of aromatic carboxylic acids . . . . .	227
5.4	General discussion . . . . .	228
6.	Decompositions of coordination compounds . . . . .	231
6.1	Metal ammine compounds . . . . .	232
6.1.1	Cobalt(III) ammine azides . . . . .	233
6.1.2	Ammine cobalt thiocyanates . . . . .	234
6.1.3	Ammine aquo cobalt salts . . . . .	234
6.1.4	Ammine nickel salts . . . . .	235
6.2	Metal pyridine compounds . . . . .	235
6.3	Compounds containing polydentate ligands . . . . .	236
6.4	Other kinetic studies . . . . .	238
6.5	General comment . . . . .	239
7.	Decompositions of solid solutions and double salts . . . . .	239
7.1	Decompositions of two-component solid solutions . . . . .	241
7.1.1	Dolomite, $(\text{Ca},\text{Mg})\text{CO}_3$ . . . . .	241
7.1.2	Mixed hydroxides . . . . .	242
7.1.3	Mixed carboxylates . . . . .	243
7.1.4	Other solid solutions . . . . .	245
7.1.5	Discussion . . . . .	245
7.2	Doping . . . . .	246

## Chapter 5

Reactions between inorganic solids . . . . .	247
1. Reactant mixtures and experimental methods . . . . .	249
2. Mechanisms of reaction . . . . .	252
2.1 Surface or gas-phase diffusion . . . . .	253
2.1.1 Area of interparticulate contact between reactants . . . . .	253
2.1.2 Initial formation (nucleation) and growth of the product phase . . . . .	254
2.1.3 Melting . . . . .	255
2.1.4 Reactant mobility and particle coarsening . . . . .	256
2.2 Interface reactions . . . . .	256
2.3 Diffusion across a barrier layer . . . . .	257
2.4 Classification of solid—solid interactions . . . . .	259
3. Decomposition of a solid catalyzed by a solid . . . . .	260
3.1 Decomposition reactions catalyzed by the solid product . . . . .	261
3.2 Decomposition reactions catalyzed by a solid additive . . . . .	262
3.2.1 Decomposition of $\text{NH}_4\text{ClO}_4$ . . . . .	263
3.2.2 Decomposition of other salts of oxyhalogen acids . . . . .	265
3.2.3 Decomposition of silver oxalate . . . . .	265
3.2.4 Decomposition of silver carbonate . . . . .	266
3.2.5 Decomposition of silver and other azides . . . . .	266
4. Reactions between solids . . . . .	267
4.1 Reactions of the type $\text{A(s)} \rightarrow \text{AB(s)}$ . . . . .	267
4.1.1 Zinc ferrite formation . . . . .	267

4.1.2	Other spinel formation reactions . . . . .	268
4.1.3	Calcium silicate formation and related reactions . . . . .	270
4.1.4	Tungstate and molybdate formation reactions . . . . .	270
4.1.5	Double iodide formation . . . . .	271
4.1.6	Other reactions . . . . .	272
4.2	Reactions of the type $A(s) + B(s) \rightarrow C(s) + D(g)$ . . . . .	272
4.2.1	Reaction of lithium carbonate with ferric oxide . . . . .	273
4.2.2	Reactions of barium carbonate with various oxides . . . . .	273
4.2.3	Molybdate and tungstate formation reactions . . . . .	275
4.2.4	Oxidation of carbon . . . . .	277
4.2.5	Other reactions . . . . .	278
4.3	Reactions of the type $AB(s) + CD(s) \rightarrow AD(s) + CB(s)$ . . . . .	279
4.4	More complicated reactions . . . . .	282
<b>Chapter 6</b>		
<b>Conclusions</b>	. . . . .	<b>283</b>
1. Decompositions of solids . . . . .	283	
2. Interactions of solids . . . . .	286
