<b>Chapter 1. 50th Anniversary of Artificial Cells</b>	<b>1</b>
1.1. Background . . . . .	1
1.2. Starting with Artificial Red Blood Cells . . . . .	2
1.3. Further Research and the First Routine Clinical Use of Artificial Cells . . . . .	5
1.4. Importance of Progress in Parallel Areas of Biotechnology, Molecular Biology, and Regenerative Medicine . . . . .	7
1.5. Historical Milestones . . . . .	7
<b>Chapter 2. Basic Principles</b>	<b>12</b>
2.1. Basic Features of Artificial Cells . . . . .	12
<i>Basic features of early artificial cells</i> . . . . .	12
<i>Present status of the basic features of artificial cells of macro, micron, nano and molecular dimensions</i> . . . . .	14
2.2. Nanotechnology and Nanobiotechnology . . . . .	15
<i>Nanobiotechnology and artificial cells</i> . . . . .	15
<i>Nanobiotechnology and the assembling of hemoglobin with enzymes that remove oxygen radicals</i> . . . . .	17
<i>Nanobiotechnology for the assembling of hemoglobin with other enzymes</i> . . . . .	17

2.3.	<i>Conjugation of polymer with proteins . . . . .</i>	18
2.3.	Cell Homogenate, Organelle, Enzymes and Multienzyme Systems . . . . .	18
	<i>Cell homogenate . . . . .</i>	18
	<i>Enzymes and enzyme therapy . . . . .</i>	19
	<i>Multienzyme systems with cofactor recycling . . . . .</i>	20
2.4.	Artificial Cells Containing Intracellular Compartments . . . . .	21
2.5.	Artificial Cells Containing Biologics and Magnetic Material . .	22
2.6.	Cells, Islets, Stem Cells, Genetically-engineered Cells and Microorganisms . . . . .	22
	<i>Artificial cells containing cells . . . . .</i>	22
	<i>Stem cells . . . . .</i>	24
	<i>Genetically-engineered cells . . . . .</i>	24
2.7.	Artificial Cells Containing Bioadsorbents . . . . .	25
2.8.	Research on Membrane Model Systems . . . . .	27
2.9.	Cell Physiology . . . . .	28
2.10.	Drug Delivery . . . . .	28
	<i>Polymeric semipermeable microcapsules . . . . .</i>	28
	<i>Biodegradable polymeric artificial cells, nanoparticles, nanocapsules . . . . .</i>	29
	<i>Liposomes — lipid membrane artificial cells . . . . .</i>	29
2.11.	Other Systems . . . . .	30
<b>Chapter 3. Oxygen Carriers Based on Nanobiotechnology</b>		31
3.1.	Introduction . . . . .	31
3.2.	Hemoglobin as Oxygen Carrier . . . . .	32
3.3.	Modified Hb . . . . .	32
	<i>PolyHb based on nanobiotechnology (Fig. 3.1) . . . . .</i>	33
	<i>Conjugated Hb (Fig. 3.1) . . . . .</i>	34
	<i>Intramolecularly crosslinked single tetrameric Hb (Fig. 3.1) . .</i>	35
	<i>Recombinant human Hb (Fig. 3.1) . . . . .</i>	35
	<i>Present status . . . . .</i>	35
3.4.	PolyHb in Clinical Trials . . . . .	36
3.5.	Nanobiotechnology-based PolyHb Compared with other Modified Hb . . . . .	39
	<i>Vasopressor effects . . . . .</i>	39

22	<i>Theories why vasopressor effects are observed only in some types of modified Hb? . . . . .</i>	39
22	<i>Effects of tetrameric Hb on vasoactivity and ECG . . . . .</i>	40
3.6.	PolyHb with <2% Tetrameric Hb . . . . .	43
3.7.	Nanobiotechnology and Immunogenicity . . . . .	45
3.7.	<i>Antigenicity measured as antibody titers . . . . .</i>	45
3.7.	<i>Effects of infusion . . . . .</i>	46
3.8.	Bridging the Gap between Safety Studies in Animal and Humans . . . . .	48
	<i>In vitro screening test using human plasma before use in humans . . . . .</i>	48
	<i>Basic principles of screening test . . . . .</i>	49
	<i>Use in research . . . . .</i>	50
	<i>Use in industrial production . . . . .</i>	50
	<i>Correlation of in vitro complement activation to clinical symptoms . . . . .</i>	51
	<i>Clinical trials and use in humans . . . . .</i>	52
3.9.	Design of Animal Study for Hemorrhagic Shock . . . . .	52
	<i>Hemorrhagic shock model . . . . .</i>	52
	<i>Experimental designs . . . . .</i>	53
3.10.	General Discussions . . . . .	55
3.11.	Methods and Procedures . . . . .	56
	<i>Special method for preparation of PolyHb containing low levels of tetrameric Hb (0.2 to 2%) . . . . .</i>	56
	<i>In vitro screening test using human plasma before use in humans . . . . .</i>	58
	<i>Animal study on hemorrhagic shock and exchange transfusion . . . . .</i>	59
	<b>Chapter 4. A Nanobiotechnologic Therapeutic that Transports Oxygen and Remove Oxygen Radicals: For Stroke, Hemorrhagic Shock and Related Conditions . . . . .</b>	62
4.1.	Introduction . . . . .	62
4.2.	Ischemia-Reperfusion . . . . .	62
4.3.	PolyHb-CAT-SOD . . . . .	63
4.4.	Enzyme Activities after Intravenous Injections . . . . .	64
	<i>Plasma Hb concentration . . . . .</i>	64

<i>SOD activity in plasma</i> . . . . .	65
<i>CAT activity in plasma</i> . . . . .	66
<i>Discussions</i> . . . . .	66
4.5. Tests in Animal Models for Stroke and Hemorrhagic Shock . . . . .	67
4.6. Ischemia-Reperfusion of the Intestine . . . . .	67
<i>Severe hemorrhagic shock and the intestine</i> . . . . .	67
<i>Test on effects of reperfusion on ischemic intestine</i> . . . . .	68
4.7. Test in Combined Hemorrhagic Shock and Stroke Rat Model . . . . .	69
<i>Prolonged hemorrhagic shock and stroke model</i> . . . . .	69
<i>Rat model of combined hemorrhagic shock and stroke</i> . . . . .	71
<i>Duration of stroke and reperfusion injuries</i> . . . . .	71
<i>Effects of different solutions on reperfusion injuries</i> . . . . .	72
<i>Disruptions of blood-brain barrier</i> . . . . .	72
<i>Brain edema</i> . . . . .	73
4.8. Discussion . . . . .	74
4.9. Preparation and Characterization . . . . .	75
<i>Method of preparation</i> . . . . .	75
<i>Molecular characterization of PolyHb-CAT-SOD</i> . . . . .	75
<i>Oxygen dissociation curve</i> . . . . .	77
<i>Effects of the crosslinking procedure on metHb formation</i> . . . . .	77
4.10. <i>In Vitro</i> Studies of the Antioxidant Properties of Crosslinked HB-SOD-CAT . . . . .	78
<i>Scavenging of superoxide (<math>O_2^{\bullet-}</math>)</i> . . . . .	79
<i>Scavenging of hydrogen peroxide (<math>H_2O_2</math>)</i> . . . . .	80
<i>Effects of oxidative challenge on the degradation of Hb and iron release in PolyHb and PolyHb-CAT-SOD</i> . . . . .	81
<i>Absorbance spectra and Hb degradation</i> . . . . .	81
<i>Release of iron</i> . . . . .	83
<i>Lipid peroxidation and salicylate hydroxylation</i> . . . . .	84
4.11. Methods and Procedures . . . . .	85
<i>Preparation of PolyHb-SOD-CAT</i> . . . . .	85
<i>Measurement of SOD activity</i> . . . . .	86
<i>Measurement of CAT activity</i> . . . . .	87
<i>Hydrogen peroxide scavenging</i> . . . . .	87
<i>Ratio of SOD/CAT and Hb oxidation</i> . . . . .	87
<i>Measurement of FerrylHb</i> . . . . .	87

6.4.	<i>Iron release study</i>	88
SET	<i>Circulation time studies</i>	88
ETT	<i>Rat model of intestinal ischemia-reperfusion</i>	89
ETT	<i>Measurement of oxygen radical</i>	89
ETT	<i>Combined hemorrhagic shock and transient global cerebral ischemia-reperfusion</i>	90
<b>Chapter 5. Nanotechnology-based Artificial Red Blood Cells (RBCs)</b>		<b>93</b>
5.1.	<i>Introduction</i>	93
5.2.	<i>Micron Dimension Artificial RBCs (ARBCs) with Ultrathin Polymeric Membrane</i>	95
	<i>Hemoglobin</i>	95
	<i>Carbonic anhydrase</i>	95
	<i>Catalase</i>	97
	<i>Immunological studies</i>	97
5.3.	<i>Intravenous Injection of ARBCs</i>	98
	<i>Polymeric membrane artificial RBCs 1 micron and larger</i>	98
	<i>Neuraminic acid and circulation time of red blood cells</i>	99
	<i>Effects of surface charge of polymeric particles on circulation time</i>	101
	<i>Artificial rbc's with sulfonated nylon membrane</i>	101
	<i>Polysaccharide incorporation</i>	102
	<i>Summary</i>	103
5.4.	<i>Submicron Lipid Membrane Artificial RBCs (LEH)</i>	104
	<i>Composition and preparation</i>	105
	<i>Methemoglobin</i>	106
5.5.	<i>LEH in Animal Studies</i>	107
	<i>Circulation time after infusion</i>	107
	<i>Safety of lipid membrane artificial rbc's</i>	108
	<i>Efficacy in exchange transfusion, hemorrhagic shock and hemodilution</i>	109
	<i>Summary</i>	110
5.6.	<i>Nanodimension Biodegradable Polymeric Membrane RBCs</i>	110
	<i>Introduction</i>	110
	<i>Nanodimension biodegradable polymeric membrane artificial rbc's</i>	111

88	<i>Safety and reasons for selection of polyesters as the biodegradable polymer membrane . . . . .</i>	65
88	<i>CAT. . . . .</i>	112
5.7.	<i>Characterization of Nano Artificial RBCs . . . . .</i>	113
85.	<i>Electromicroscopic appearance . . . . .</i>	113
46.	<i>Size distribution of polylactide membrane artificial rbc's . . . . .</i>	113
08	<i>Other properties . . . . .</i>	114
58.	<i>Steady shear viscosity determination . . . . .</i>	115
5.8.	<i>Safety and Efficacy of Nano Artificial RBCs . . . . .</i>	115
88	<i>Amount and fate of PLA membrane . . . . .</i>	115
25.	<i>Efficiency in nanoencapsulating hemoglobin . . . . .</i>	117
25.	<i>Oxygen affinity, Hill coefficient and Bohr effect . . . . .</i>	117
25.	<i>Enzymes and multienzymes . . . . .</i>	118
25.	<i>Nano artificial rbc's containing metHb reductase system . . . . .</i>	119
25.	<i>Nano artificial rbc's permeable to reducing factors . . . . .</i>	120
25.	<i>Enzymes and multienzymes in PLA nano artificial rbc's . . . . .</i>	121
5.9.	<i>Circulation Time of Nano Artificial RBCs . . . . .</i>	121
88	<i>Circulation half-life of nano PLA artificial rbc's . . . . .</i>	121
88	<i>Different types of PEG-PLA copolymers for nano artificial rbc's . . . . .</i>	121
88	<i>Analysis of results . . . . .</i>	126
490.	<i>Relevance for clinical application in humans . . . . .</i>	127
505.	<i>General . . . . .</i>	127
5.11.	<i>Method of Preparation of Biodegradable Polymeric Nano Artificial RBCs . . . . .</i>	128

## **Chapter 6. Use of Enzyme Artificial Cells for Genetic Enzyme Defects that Increase Systemic Substrates to Toxic Levels 130**

6.1.	<i>Introduction . . . . .</i>	130
501.	<i>General . . . . .</i>	130
801.	<i>Enzyme replacement therapy . . . . .</i>	132
6.2.	<i>Acatalasemia: Congenital Defect in the Enzyme Catalase . . . . .</i>	132
6.3.	<i>Preliminary Study on the Use of Catalase Artificial Cells to Replace Defective Catalase in Acatalasemia . . . . .</i>	133
011.	<i>Implantation of catalase artificial cells . . . . .</i>	133
011.	<i>Catalase artificial cells retained in a chamber for body fluid perfusion . . . . .</i>	135

6.4.	<i>In Vivo Kinetics of Catalase Artificial Cells for Acatalasemic Mice . . . . .</i>	135
	<i>Summary . . . . .</i>	135
020	<i>Methods of preparation of catalase artificial cells and experimental procedures . . . . .</i>	136
221	<i>Characteristics of acatalasemic mice . . . . .</i>	136
222	<i>Kinetics of recovery of injected perborate . . . . .</i>	136
6.5.	<i>Immunological Studies on Catalase Artificial Cells in Acatalasemic Mice . . . . .</i>	137
123	<i>Effects of immunizing doses of catalase solution and catalase artificial cells on antibody production . . . . .</i>	137
124	<i>Permeability of membrane of collodion artificial cells to catalase antibody . . . . .</i>	138
225	<i>Response of immunized acatalasemic mice to injections of catalase artificial cells or catalase solution . . . . .</i>	139
226	<i>Appearance of catalase activity in the blood after injection of catalase solution or catalase artificial cells . . . . .</i>	140
6.6.	<i>Conclusion from Results of Basic Study Using the Acatalasemic Mice Model . . . . .</i>	141
6.7.	<i>Oral Xanthine Oxidase Artificial Cells in a Patient with Lesch-Nyhan Disease . . . . .</i>	142
027	<i>Volume ratio of artificial cells/substrate solution . . . . .</i>	143
128	<i>Effects of pH on enzyme activity . . . . .</i>	144
529	<i>Patient with Lesch-Nyhan disease . . . . .</i>	144
6.8.	<i>Conclusion Based on Study . . . . .</i>	146
6.9.	<i>Phenylketonuria: Genetic Defect in Enzyme Phenylalanine Hydroxylase . . . . .</i>	147
720	<i>Phenylketonuria . . . . .</i>	147
721	<i>Enzyme replacement therapy . . . . .</i>	147
722	<i>Oral PAL artificial cells for PKU based on novel theory of enterorecirculation of amino acids . . . . .</i>	148
6.10.	<i>Research Leading to Proposal of Enterorecirculation of Amino Acids . . . . .</i>	149
823	<i>Classical theory of the main source of amino acids in the intestinal lumen . . . . .</i>	149
824	<i>Research to test the classical theory . . . . .</i>	149
825	<i>Artificial cells containing islets . . . . .</i>	149

<i>Animals on 24 h of protein-free diet . . . . .</i>	149
<i>Results of study . . . . .</i>	149
<i>Proposed theory of extensive enterorecirculation of amino acids . . . . .</i>	150
<b>6.11. Oral Enzyme Artificial Cells for Genetic Enzyme Defects that Result in Elevated Systemic Amino Acid Levels . . . . .</b>	152
<i>General design for study of use of oral PAL artificial cells in PKU rats . . . . .</i>	152
<i>Methods of preparation of catalase artificial cells and experiment procedures . . . . .</i>	154
<i>Phenylketonuria rat model . . . . .</i>	154
<i>Intestinal phenylalanine . . . . .</i>	154
<i>Plasma PHE levels in PKU rats . . . . .</i>	155
<i>CSF cerebrospinal fluid in PKU rats . . . . .</i>	155
<i>Growth as shown by body weight changes . . . . .</i>	155
<i>Congenital PKU mice model . . . . .</i>	157
<i>Summary discussion . . . . .</i>	158
<i>Oral enzyme artificial cells to deplete other amino acids . . . . .</i>	158
<b>Chapter 7. Enzyme Artificial Cells in Substrate-dependent Tumors and Activation of Prodrug . . . . .</b>	160
<b>7.1. Introduction . . . . .</b>	160
<b>7.2. Asparaginase in Lymphosarcoma and Lymphoblastic Leukemia . . . . .</b>	161
<b>7.3. Asparaginase Artificial Cells for Lymphosarcoma . . . . .</b>	162
<i>Asparaginase artificial cells on 6C3HED lymphosarcoma in mice (Fig. 7.2A) . . . . .</i>	162
<i>Effects on plasma asparagine level . . . . .</i>	164
<i>Asparaginase activities in the body . . . . .</i>	165
<i>Asparaginase does not leak out of artificial cells after injection . . . . .</i>	166
<i>Discussions . . . . .</i>	167
<b>7.4. Crosslinking Asparaginase to Hemoglobin (PolyHb-Asparaginase) . . . . .</b>	168
<b>7.5. Crosslinking of Asparaginase to Polymer (Polyethylene Glycol — PEG) . . . . .</b>	170
<b>7.6. PolyHb-Tyrosinase Artificial Cells for Melanoma . . . . .</b>	172

525	<i>Introduction</i> . . . . .	172
526	<i>Polyhemoglobin-tyrosinase for melanoma</i> . . . . .	172
527	<i>Studies on optimization, in vitro and in vivo</i>	
528	<i>characterization</i> . . . . .	176
529	<i>Summary</i> . . . . .	178
530	<b>7.7. Tyrosinase Artificial Cells by Oral Route</b> . . . . .	179
531	<i>Introduction</i> . . . . .	179
532	<i>Effects of Long-term Oral Administration of Polymeric</i>	
533	<i>Microcapsules Containing Tyrosinase on Maintaining</i>	
534	<i>Decreased Systemic Tyrosine Levels in Rats</i> . . . . .	180
535	<i>Enzyme kinetics</i> . . . . .	182
536	<b>7.8. Discussions on PolyHb-Tyrosinase and Tyrosinase Artificial</b>	
537	<i>Cells</i> . . . . .	185
538	<b>7.9. Enzyme Artificial Cells for Activating Prodrugs</b> . . . . .	186
539	<i>Introduction</i> . . . . .	186
540	<i>Clinical trial results</i> . . . . .	187
541	<b>7.10. Materials and Methods</b> . . . . .	188

<b>Chapter 10. Hemoperfusion in Poisoning, Kidney Failure, Liver Failure, and Immunology</b>	<b>252</b>
10.1. Introduction . . . . .	252
<i>Artificial kidney machine</i> . . . . .	252
<i>Hemoperfusion based on artificial cells</i> . . . . .	252
10.2. Development and Clinical Trials . . . . .	253
<i>Treatment of patients with severe accidental or suicidal poisoning</i> . . . . .	255
<i>Hemoperfusion for removal of unwanted or toxic substances from blood under other conditions</i> . . . . .	256
<i>Treatment of patients with terminal kidney failure</i> . . . . .	256
<i>Treatment of patients with hepatic coma</i> . . . . .	257
<i>Protein-coated artificial cells in immunoabsorption</i> . . . . .	258
10.3. Basic Principle of Artificial Cell in Hemoperfusion . . . . .	258
<i>Permeability and transport characteristics</i> . . . . .	258
<i>Experimental analysis</i> . . . . .	260
10.4. Artificial Cells Containing Activated Charcoal in Hemoperfusion . . . . .	261
<i>Why use activated charcoal for artificial cell hemoperfusion?</i> .	261
<i>Effects on embolism</i> . . . . .	262
<i>Effects of hemoperfusion on platelets</i> . . . . .	262
<i>Clearance of the ACAC artificial cell artificial kidney</i> . . . . .	263
<i>Improvements in hydrodynamics</i> . . . . .	265
10.5. Hemoperfusion in Acute Suicidal or Accidental Poisoning . . . . .	266
<i>Preclinical studies</i> . . . . .	266
<i>First clinical trials in acute poisoning</i> . . . . .	266
<i>Result of clinical trials on 11 adult patients with suicidal or accidental drug poisoning</i> . . . . .	267
<i>Pediatric patient with accidental theophylline overdose</i> . . . . .	273
<i>Routine clinical uses in patients around the world</i> . . . . .	275

10.6. Hemoperfusion in Terminal Renal Failure Patients . . . . .	276
10.7. Hemoperfusion Alone Supplemented by Hemodialysis . . . . .	279
<i>General clinical results</i> . . . . .	279
<i>First patient on long-term hemoperfusion</i> . . . . .	279
<i>Hemoperfusion and removal of uremic metabolites</i> . . . . .	283
10.8. Conjoint Hemoperfusion-Hemodialysis . . . . .	283
10.9. Miniaturized Artificial Kidney Based on Hemoperfusion-Ultrafiltration . . . . .	286
10.10. Hemoperfusion in Liver Failure . . . . .	288
<i>First observation of recovery of consciousness in hepatic coma</i> . . . . .	288
<i>Results around the world on effect of hemoperfusion on hepatic coma</i> . . . . .	290
<i>Control studies in galactosamine-induced hepatic failure rats</i> . .	291
10.11. Immunoabsorption . . . . .	294
<i>Protein coated artificial cells in immunoabsorption</i> . . . . .	294
10.12. Detailed Procedures for the Laboratory Preparation of ACAC Hemoperfusion Device . . . . .	295
<i>The extracorporeal shunt chamber</i> . . . . .	295
<i>Preparation of activated charcoal</i> . . . . .	295
<i>Preparation of artificial cells containing activated charcoal</i> . .	296
<i>Procedure for hemoperfusion</i> . . . . .	297
<b>Chapter 11. Perspectives on the Future of Artificial Cells as Suggested by Past Research</b>	<b>299</b>
11.1. Introduction . . . . .	299
11.2. Membrane Material . . . . .	300
11.3. Polymeric Membrane . . . . .	300
<i>Porosity of polymeric membrane of artificial cells</i> . . . . .	300
11.4. Lipid Membrane Artificial Cells . . . . .	304
11.5. Artificial Cells with Lipid-Polymer Membrane and Incorporation of Macrocyclic Carrier, NA-K-ATPase and Other Carriers . . . . .	305
<i>Artificial cells with lipid-polymer membrane</i> . . . . .	305
<i>Incorporation of channels into lipid-polymer membrane of artificial cells</i> . . . . .	307
<i>Incorporation of Na-K-ATPase in the membrane of artificial cells</i> . . . . .	310
<i>Nanobiosensors</i> . . . . .	312

11.6.	Surface Properties of Artificial Cell Membranes . . . . .	312
11.7.	Drug Delivery . . . . .	314
General . . . . .	314	
Polymeric semipermeable microcapsules . . . . .	316	
Biodegradable polymeric artificial cells, nanoparticles, nanocapsules . . . . .	316	
Liposomes evolved into lipid vesicles that are lipid membrane artificial cells . . . . .	316	
Polymer(PEG)-lipid membrane artificial cells or PEG-lipid vesicles . . . . .	318	
Polymersomes: polymeric membrane artificial cells . . . . .	319	
11.8.	Artificial Cells Containing Multienzyme Systems with Recycling of ATP and NADH . . . . .	320
Artificial cells containing multienzyme system for recycling of ATP . . . . .	320	
Artificial cells containing multienzyme system for recycling of NAD(P)H . . . . .	320	
Artificial cells containing urease, glutamate dehydrogenase and Proline glucose-6-phosphate dehydrogenase . . . . .	321	
Dextran-NADH retained and recycled inside artificial cells (Fig. 11.4) . . . . .	322	
Multienzyme with NAD-dextran for conversion of waste, urea, into useful essential amino acids . . . . .	324	
Recycling of free NADH retained within the lipid-polymer membrane artificial cells for conversion of urea into amino acid . . . . .	324	
Summary . . . . .	327	
11.9.	Artificial Cells Containing Microsomes, Cytosol Ribosomes and Polymerases . . . . .	327
Introduction . . . . .	327	
Artificial cells containing liver microsomes and cytosol . . . . .	328	
Towards a “living” artificial cell containing polymerases, ribosomes and transcription/translation system . . . . .	328	
11.10.	New Generations of Computer System and Nanoscale Robotics Based on Artificial Cells . . . . .	331
11.11.	The Future of Artificial Cells . . . . .	332

<b>Appendix I. 1957 Report on "Method for Preparing Artificial Hemoglobin Corpuscles"</b>	<b>335</b>
ERYTHROCYTES . . . . .	335
1. Structure . . . . .	335
2. Function . . . . .	336
3. Enzymes and inclusion bodies . . . . .	336
HEMOGLOBIN . . . . .	337
1. Molecular structure . . . . .	337
2. Hemoglobin content of the blood . . . . .	337
3. Methemoglobin . . . . .	337
4. Derivatives of hemoglobin . . . . .	338
MEMBRANE . . . . .	338
1. Reason for using collodion membrane . . . . .	338
2. Studies made on collodion membrane . . . . .	339
3. Final constituents of collodion solution used in this experiment . . . . .	339
METHOD . . . . .	340
Method I . . . . .	340
Method II . . . . .	343
Experimentation with collodion . . . . .	343
Method III . . . . .	343
Method IV — successful method . . . . .	344
Procedure . . . . .	345
Proof that collodion membrane is formed . . . . .	347
RESULTS . . . . .	348
i. Size of corpuscles . . . . .	348
ii. Content of corpuscles . . . . .	348
iii. Oxygen content . . . . .	348
DISCUSSIONS . . . . .	350
Transportation of $O_2$ and $CO_2$ . . . . .	351
Enzyme systems in the erythrocyte . . . . .	353
Buffering action of erythrocyte . . . . .	353
SUMMARY . . . . .	354
BIBLIOGRAPHY . . . . .	354

**Appendix II. Methods not Described in Detail in the 11 Chapters** 355

A.	EMULSION METHODS FOR ARTIFICIAL CELLS . . . . .	355
	A.1. Cellulose nitrate membrane artificial cells of micro dimensions . . . . .	355
	A.2. Polyamide membrane artificial cells of micro dimensions .	357
	A.3. Lipid-polymer membrane artificial cells of micro dimensions that retain ATP and NAD(P)H . . . . .	360
	A.4. Double emulsion methods . . . . .	361
B.	DROP METHODS FOR LARGER ARTIFICIAL CELLS . . . . .	362
	B.1. Polymer membrane artificial cells . . . . .	362
	B.2. Lipid-polymer membrane artificial cells . . . . .	364
	B.3. Lipid-polymer membrane artificial cells with macrocyclic carrier . . . . .	365
	B.4. Incorporation of Na-K-ATPase to membrane of artificial cells . . . . .	365
	B.5. Standard alginate-polylysine-alginate artificial cells (tissues, cells, microorganisms) . . . . .	366
	B.6. Two-step method for alginate-polylysine-alginate artificial cells (tissues, cells, microorganisms) . . . . .	372
	B.7. Macroporous agar membrane artificial cells . . . . .	374
