

Contents

1 Complete lattices	5
2 Closure operators and closure systems	9
3 Galois connections	13
4 Basic concepts of Universal Algebra	19
5 Algebraic lattices	33
6 Homomorphism Theorem and Isomorphism Theorems	37
7 Direct and subdirect products	41
8 Varieties	49
9 Free algebras	53
10 Equational theory	57
11 Maltsev conditions	67
12 Characterization of congruence classes	73
13 Simplicity of function algebras	77
14 Pseudovarieties of semigroups	79
