

Preface	9
Introductory addresses	13

INTRODUCTORY PAPERS

<i>Gaston R. Demarée, Tania Verhoeve, Pieter-Jan Lachaert, Erik Thoen</i> – The long-term temperature time-series of Central Belgium (1767-1999)	41
<i>Lawrence C. Nkemdirim</i> – A matter of equity	49
<i>Leszek Starkel</i> – Heavy rains and floods in Europe during last millennium	55

THE PROXY CLIMATIC DATA

<i>Rudolf Brázdil, Petr Dobrovolný</i> – Chronology of strong wind events in the Czech Lands during the 16th-19th centuries	65
<i>Rudolf Brázdil, Oldřich Kotyza</i> – Utilisation of the Louny economic sources for the reconstruction of winter temperature patterns in 1518-1621	71
<i>Alexander Krenke, Margarita Chernavskaya</i> – Extreme climatic phenomena over the Russian Plain during the Medieval Warming and the Little Ice Age according to documentary records	79
<i>Adriaan M.J. de Kraker</i> – Storm surges, high tides and storms as extreme weather events, their impact on the coastal zone of the North Sea and the human response, 1350 to 2000	85

<i>Konrad Gajewski</i> – Climate of the last millennium in eastern North America and impacts on the vegetation	101
<i>Alain Gioda, María del Rosario Prieto, Ana Forenza</i> – Archival climate history survey in the Central Andes (Potosi, 16th-17th centuries)	107
<i>Danuta Limanówka</i> – The transformation of thermal descriptive characteristics in Cracow from 16th century into the quantitative evaluation	113
<i>Jan Munzar</i> – Selected historical floods in Moravia in the pre-instrumental era in Central-European context	119
<i>Øyvind Nordli</i> – Climate analysis based on Norwegian proxy data	127
<i>Grzegorz Skrzypek, Mariusz O. Jędrysek</i> – Climatic variation in the last millennium in Poland: $\delta^{13}\text{C}$ peat profiles	131
<i>Gabriel Wójcik, Jacek Majorowicz, Kazimierz Marciniak, Rajmund Przybylak, Jan Šafanda, Andrzej Zielski</i> – The last millennium climate change in Northern Poland derived from well temperature profiles, tree-rings and instrumental data	137

THE INSTRUMENTAL DATA

<i>Vesselin Alexandrov</i> – Climate variability in Bulgaria during the 20th century	151
<i>Zuzanna Bielec</i> – The role of atmospheric circulation in the development of the long-term thunderstorm occurrence variability in Poland during 1949-1998	157
<i>Grażyna Bil</i> – Changes of convective weather found in Katowice (1966-1996)	165
<i>Rudolf Brázdil, Petr Štěpánek, Vít Květoň</i> – Air temperature fluctuation in the Czech Republic in the period 1961–1999	173
<i>Mikhail Budyko, Irina Baikova, Nina Yefimova, Larissa Strokina</i> – Analysis of climate changes in cloudiness and surface air temperature for 1967-1995 in Russia	179
<i>Tanja Cegnar, Metka Roethel Kovač</i> – Beginnings of instrumental meteorological observations in Slovenia	185
<i>Jan Degirmendžić</i> – Quasi-monthly air temperature cyclicity in the lower stratosphere	191
<i>Peter Domonkos, Judit Zoboki</i> – Climate changes during the 20th century in Hungary	199
<i>Maria Dubicka, Bronisław Głowicki</i> – Air temperature and cloudiness at Śnieżka between 1901 and 1998	207
<i>Małgorzata Falarz</i> – An attempt of reconstruction of nival conditions on the turn of the 19th century in Cracow and Zakopane	213
<i>Ashot Volodia Khoetsian</i> – Greenhouse effect and global changes of climate	

(on the example of the Republic of Armenia (RA))	223
<i>Leszek Kowanetz, Janina Trepńska</i> – Meteorological instruments in the Astronomical Observatory of Jagiellonian University in 18th and 19th century	229
<i>Krzysztof Koźuchowski, Elwira Żmudzka</i> – Vegetation and climate in Poland in the 1990s: Variations of the normalised difference vegetation index, air temperature, sunshine and precipitation	235
<i>Dorota Matuszko</i> – Long-term observation of cloud cover in Cracow (1792-1999)	243
<i>Rajmund Przybylak</i> – Air temperature in the Canadian Arctic in the mid-nineteenth century based on data from expeditions	251
<i>Jan Tamulewicz</i> – „Share” of temperature of particular months in the annual temperature in Poznań in the period 1848-1997	259
<i>Sakari Tuhkanen</i> – Climatic change and the Nordic countries, especially in the light of mean temperatures for the normal periods 1931–60 and 1961–90	267
<i>Robert Twardosz</i> – Pluvial conditions in Cracow at the end of the Little Ice Age	281
<i>Miroslav Vysoudil</i> – Long-term atmospheric rainfall fluctuation in Northern Moravia (Czech Republic) 1881-1980	289
<i>Zygmunt Wilczek</i> – Comparison of cloudiness types for neighbouring airports	297

CLIMATE METHODS AND MODELLING

<i>Joanna Bac-Bronowicz</i> – The problem of determination of the boundary line for climatological regions in Lower Silesia	307
<i>Roman Corobov</i> – Climate change projections as input for the assessment of impacts on regional systems	315
<i>Roman Corobov, Alla Nicolenco</i> – Spatial presentation of regional climate change information	325
<i>Traute Crüger, Hans von Storch</i> – Development of a downscaling model for estimation of an ‘artificial ice core’ derived from large scale parameters of a 1000 year GCM run	333
<i>Annick Douguédroit</i> – The Mediterranean Oscillation in winter	339
<i>Izabela Dyras, Bożena Łapeta</i> – New generation meteorological satellites – potential application for climatological research	345
<i>Izabela Dyras, Bożena Łapeta</i> – Satellite instruments providing climatological data	351

<i>Krzysztof Fortuniak</i> – Regularities in the Polish temperature time series and climate prediction or reconstruction	357
<i>Małgorzata Liszewska</i> – Examples of reconstructions of Polish climate by GCMS and projections for future	365
<i>Józef Edward Mojski</i> – Forecasts of the morphogenetic processes' evolution in Poland	373
<i>Tadeusz Niedźwiedź</i> – Variability of the atmospheric circulation above Central Europe in the light of selected indices	379
<i>Marek Nowosad</i> – An attempt to determine the changes of the circulation seasons presented upon the example of the Upper Vistula River basin	391
<i>Janusz Olejnik, Frank Eulenstein, Matthias Willms</i> – Mesoscale heat and water balance structure under present and future climate conditions – catchment case study in southern part of Germany	397
<i>Janusz Olejnik, Jacek Leśny, Andrzej Kędziora</i> – The method of estimation of Bowen ratio areal distribution by parameterization based on meteorological and land-use data	407
<i>Marzena Osuch</i> – Comparison of mean sea level pressure from GCMS against re-analysis for Central Europe	415
<i>Nadezhda A. Shumova</i> – On intensity and recurrence of droughts in the forest-steppe and steppe zones	423
<i>Jerzy Andrzej Trapp, Andrzej Wyszkowski, Michał Marosz</i> – Role of the index of vertical changeability of wind in the dynamics of macro-, meso- and topoclimate of the Baltic Sea shore	429
