Preface	xi
About the <i>Web Survey Methodology</i> book	xii
About the accompanying <i>Web Survey Methodology</i> website	xiii
Acknowledgements	xv
About the authors	xvii
List of acronyms	xix
1 Survey research and web surveys	3
1.1 Definition and typology	4
1.1.1 Surveys and web surveys	4
1.1.2 The users of web surveys	6
1.1.3 Sampling aspects of web surveys	7
1.2 Web survey process	9
1.3 Evolution of web surveys, applications and related practices	11
1.3.1 Web surveys vs Internet and online surveys	12
1.3.2 Precursors and alternatives to web surveys	13
1.3.3 Rise of modern web surveys	15
1.3.4 The context of survey modes	17
1.3.5 Overview of advantages and limitations	18
1.3.5.1 Costs	18
1.3.5.2 Speed of data collection	20
1.3.5.3 Ease of implementation	21
1.3.5.4 Computerization of the questionnaire	22
1.3.5.5 Multimedia	22
1.3.5.6 Time and geographic flexibility	23
1.3.5.7 Self-administration	23
1.3.6 Applications of web surveys	25
1.3.6.1 Web surveys of highly covered specific populations	25
1.3.6.2 Customer satisfaction surveys	26
1.3.6.3 General population surveys	27
1.3.6.4 Business surveys	28
1.3.6.5 Online panels	29
1.3.6.6 Online community surveys	29
1.3.6.7 Website evaluations	30
1.3.6.8 Entertainment polls, questionnaires and quizzes	31
1.3.7 Related practices of web surveys	31
1.3.7.1 Administrative forms on the web	31
1.3.7.2 Internet testing	31
1.3.7.3 Psychological web experiments	33

2 Pre-fielding	35
2.1 Mode elaboration	36
2.1.1 Selecting the web survey mode	36
2.1.2 Mixed-mode setting	37
2.1.2.1 Mixed-mode surveys, multimode contacting and mixed-mode systems	37
2.1.2.2 Problems with mixed-mode surveys	38
2.1.2.3 Web surveys in mixed-mode setting	39
2.2 Sampling	40
2.2.1 Defining populations	41
2.2.2 Sampling design principles in probability web surveys	42
2.2.2.1 Sampling frames	42
2.2.2.2 Sampling techniques	45
2.2.2.3 Sample size	46
2.2.3 Sampling design issues in non-probability web surveys	48
2.2.3.1 Recruitment for non-list-based web surveys	48
2.2.3.2 Sampling design approximations in non-probability setting	51
2.2.4 Statistical inference in probability and non-probability surveys	52
2.2.4.1 Statistical inference with probability samples	53
2.2.4.2 Statistical inference with non-probability samples	54
2.2.4.3 Deciding on the probability–non-probability sampling dilemma	56
2.2.4.4 Concluding remarks on non-probability web surveys	57
2.2.5 Non-coverage problem	59
2.3 Questionnaire preparation	61
2.3.1 General issues	61
2.3.1.1 Typologies of survey questions	61
2.3.1.2 Question development process	62
2.3.1.3 Question and questionnaire design principles	63
2.3.1.4 Measurement process and measurement errors	64
2.3.1.5 Cognitive aspect of the response process	64
2.3.1.6 Specifics of non-substantive responses	64
2.3.1.7 Question banks	65
2.3.1.8 Specifics of web questionnaires	65
2.3.2 Question types	66
2.3.2.1 Single item questions	67
2.3.2.2 Questions with multiple items	77
2.3.2.3 Other question types	84
2.3.3 Questionnaire structure, computerization and layout	87
2.3.3.1 Structure of the questionnaire	87
2.3.3.2 Computerization, interactivity and dynamics	91
2.3.3.3 Visual layout	95
2.3.4 Ensuring survey engagement	98
2.3.4.1 Engagement, flow and user experience	98
2.3.4.2 Survey gamification	99
2.3.4.3 Questionnaire length	101
2.3.4.4 Survey satisficing	102

2.3.5 Web questionnaire testing	104
2.3.5.1 Traditional testing approaches	105
2.3.5.2 Specific testing approaches for web questionnaires	107
2.3.6 Integration of questionnaire development, computerization and testing	112
2.4 Technical preparations	115
2.4.1 Preparations for capturing and organizing data	115
2.4.1.1 Database preparations	115
2.4.1.2 Respondent tracing and unique identifiers	116
2.4.1.3 Email settings	118
2.4.1.4 Sample management	120
2.4.2 Paradata collection	121
2.4.2.1 Contact-info paradata	121
2.4.2.2 Device-type paradata	122
2.4.2.3 Questionnaire navigation paradata	122
2.4.2.4 Software for collecting paradata	123
2.4.2.5 Analysis of paradata	124
2.4.2.6 Paradata privacy and ethics	124
2.4.3 Preparations to support security and privacy	125
2.4.3.1 Securing the server	126
2.4.3.2 Securing the web survey response process	127
2.4.3.3 Technical aspects of anonymity	127
2.4.3.4 Securing physical and electronic access to the datafile	128
2.4.3.5 Access auditing	128
2.4.3.6 Relation to legislation and professional standards	129
2.4.4 Technical pre-testing of web survey software	129
2.5 Nonresponse strategy	130
2.5.1 General issues in web survey nonresponse	130
2.5.1.1 Nonresponse theories	131
2.5.1.2 Nonresponse process in web surveys	132
2.5.1.3 Factors affecting web survey nonresponse	133
2.5.2 Defining nonresponse, breakoffs and completeness	135
2.5.2.1 Indicators of unit nonresponse	136
2.5.2.2 Breakoffs	138
2.5.2.3 Item nonresponse at the question level	140
2.5.2.4 Item nonresponse at unit level	140
2.5.2.5 Completes, partials and unusable units	141
2.5.3 Relation between nonresponse rates and nonresponse biases	143
2.5.4 General web survey design characteristics and nonresponse	146
2.5.4.1 Survey sponsor	146
2.5.4.2 Topic salience	148
2.5.4.3 Questionnaire design	148
2.5.5 Incentives in web surveys	149
2.5.6 The role of the contacting process: mode, timing and frequency	151
2.5.6.1 Mode of contact	151
2.5.6.2 Day and time of sending invitations	152

2.5.6.3	Number of contacts and their scheduling	2.8.2	152
2.5.6.4	Length of the fieldwork period	1.2.3.2	153
2.5.7	Specifics of the invitation format	5.2.3.2	154
2.5.7.1	Personalization of the invitations	6.8.2	155
2.5.7.2	Providing motivation and tone of request	6.8.2	156
2.5.7.3	Format and visual design of email invitations	6.8.2	156
2.5.8	Towards a nonresponse strategy	1.1.1.2	158
2.6	General management	2.4.1.2	160
3	Fielding	2.4.1.2	165
3.1	Recruiting	2.4.1.2	166
3.2	Measurement	2.4.1.2	167
3.3	Processing and monitoring	2.4.1.2	168
3.3.1	Activation, soft launch, full launch and deactivation	1.2.4.2	168
3.3.2	Providing help	1.2.4.2	169
3.3.3	Fieldwork interventions	1.2.4.2	170
3.3.4	Monitoring of the fieldwork process	1.2.4.2	171
4	Post-fielding	2.4.1.2	175
4.1	Data preparation	2.4.1.2	176
4.1.1	Establishing response statuses	1.2.4.2	176
4.1.1.1	Eligibility, completeness and quality status of the units	1.2.4.2	177
4.1.1.2	Missing values and non-substantive responses	1.2.4.2	178
4.1.1.3	Reporting on response statuses	1.2.4.2	178
4.1.2	Validation and editing	1.2.4.2	179
4.1.3	Imputations	1.2.4.2	180
4.1.4	Weighting	1.2.4.2	182
4.1.5	Coding and recoding	1.2.4.2	183
4.2	Preliminary results	2.4.1.2	185
4.2.1	Reporting	2.4.1.2	185
4.2.2	Dissemination	2.4.1.2	186
4.3	Data exporting and documentation	2.4.1.2	187
4.3.1	Data exporting	2.4.1.2	187
4.3.2	Statistical disclosure	2.4.1.2	187
4.3.3	Documentation	2.4.1.2	188
4.3.4	Data archiving	2.4.1.2	189
5	Selected topics in web survey implementation	2.4.1.2	191
5.1	Smartphones, tablets and other devices	2.4.1.2	192
5.1.1	Introduction to multiple devices	1.4.2.2	192
5.1.2	Survey strategies for handling mobile devices	1.2.4.2	195
5.1.3	Device effects	1.2.4.2	196
5.1.4	Designing web questionnaires for smartphones	1.2.4.2	199
5.1.5	Browser-based mobile surveys vs mobile survey apps	1.2.4.2	201
5.1.6	Software for multi-device web surveys and mobile survey apps	1.2.4.2	203
5.1.7	Challenges and conclusions	1.2.4.2	204

5.2 Online panels	205
5.2.1 Terminology and typology	206
5.2.2 Recruitment, sampling and selection	206
5.2.2.1 Recruitment methods for non-probability online panels	207
5.2.2.2 Recruitment methods for probability online panels	207
5.2.2.3 Sampling and selecting online panel members for individual surveys	208
5.2.3 Maintaining an online panel	209
5.2.4 Online panel study designs	210
5.2.5 Online panel data quality	210
5.2.5.1 Comparison of online panel data quality and results	210
5.2.5.2 Effect of weighting on online panel data quality	212
5.2.5.3 Other data quality issues in online panel research	212
5.2.5.4 Conclusions on online panel data quality	213
5.2.6 Buying online panel research	214
5.2.7 The future of online panels	214
5.3 Web survey software	215
5.3.1 Integrated ICT support for the web survey process	217
5.3.2 The web survey software market	219
5.3.3 Characteristics of web survey software	220
5.3.4 Discussion of two selected features	223
5.3.4.1 Interface speed	223
5.3.4.2 Critical features of the GUI	224
5.3.5 Finding the right tool	225
5.3.6 Trends in web survey software	226
6 Broader context of web surveys	231
6.1 Broader methodological context	232
6.1.1 Web survey mode revised	232
6.1.2 Total survey error and survey data quality	233
6.1.3 Evaluation of the web survey mode effect	235
6.1.4 Cost-error optimization	236
6.1.5 Beyond the core web survey process	237
6.1.5.1 The step of preliminary research activities	237
6.1.5.2 The step of advanced analysis, processing and valorization	238
6.1.5.3 Mixed-modes	238
6.1.5.4 Mixed methods	240
6.1.6 Towards interactive fieldwork design	240
6.2 Web surveys within the project management framework	242
6.3 The web survey profession	244
6.3.1 Related disciplines	245
6.3.2 Legal issues	246
6.3.3 General ethical concerns	246
6.3.4 Formalized certificates, codes and standards	247
6.3.5 Informal guides, recommendations and other material	248
6.4 Web survey bibliography	249

7 Future of web surveys	Online panels	255
7.1 General technological developments	Technological development	256
7.2 Web survey software	Recruitment, sampling and selection	257
7.3 Methodology	Recruitment methods for non-web surveys	258
7.4 Broader business and societal issues	Recruitment methods for web surveys	259
8 Conclusions	Subsamples and design decisions	262
Bibliography	Nonresponse strategy	
Author Index	Online panels as outline based	
Subject Index	Minimizing nonresponse	
Part A: Sampling	Online panel study designs	
3.1 Measurement	Online panel data quality	267
3.2 Processing and analysis	Online panel data quality	
3.3 Activation, non-response and drop-out	Online panel data quality	
3.3.1 Activation, non-response and drop-out	Online panel data quality	167
3.3.2 Providing help	Other data quality issues in online panels	168
3.3.3 Fieldwork interventions	Considerations on online panel data quality	168
3.3.4 Monitoring of the fieldwork process	Balancing online panel data quality	169
3.4 Type of online panels	Type of online panels	170
3.5 Web survey software	Web survey software	171
Post-fielding	Using software for the post-sample process	
4.1 Data preparation	Web survey software market	175
4.1.1 Establishing response statuses	Classification of web survey software	176
4.1.1.1 Eligibility, completeness and quality	Classification of two selected sources	
4.1.1.2 Missing values and non-response	Eligibility, completeness and quality	177
4.1.1.3 Reporting on response statuses	Missing values and non-response	178
4.1.2 Validation and editing	Validation and editing	179
4.1.3 Imputations	Imputations	180
4.1.4 Weighting	Weighting	180
4.1.5 Coding and recoding	Coding and recoding	183
4.2 Preliminary results	Based on web survey context	
4.2.1 Reporting	Web survey mode coverage	183
4.2.2 Dissemination	Joint survey count and survey mode effects	185
4.2.3 Data exporting and documentation	Evaluation of the web survey mode effects	185
4.3 Beyond the core web survey process	Co-control dimensions	187
4.3.1 Data exporting	Beyond the core web survey process	187
4.3.2 Statistical disclosure	The risk of preliminary less serious violations	187
4.3.3 Disclosure by statistical agencies only	Statistical disclosure	188
4.3.4 Data archiving	Data archiving	189
4.4 Mixed methods	Mixed methods	
5 Selected topics in web survey implementation	Journalistic interview techniques	191
5.1 Smartphones, tablets and mobile devices	Web surveys without the present implementation	191
5.1.1 Introduction to multiple devices	Type of smart devices	192
5.1.2 Survey strategies for handling mobile devices	Mobile devices	193
5.1.3 Device effects	Device effects	196
5.1.4 Designing web questionnaires for smartphones	Questionnaire design concepts	199
5.1.5 Browser-based mobile devices, tablets and smartphones	Browser-based mobile devices	201
5.1.6 Software for mobile devices	Software for mobile devices	203
5.1.7 Challenges and conclusions	Web survey implementation	204
