## PART I BACKGROUND

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Some Examples	3
1.2	Scope and Limitations	11
1.3	Background Reading	14
<b>2</b>	<b>Some Key Ideas</b>	<b>17</b>
2.1	Scaled Variables	17
2.2	Design Regions	19
2.3	Random Error	21
2.4	Unbiasedness, Validity, and Efficiency	23
<b>3</b>	<b>Experimental Strategies</b>	<b>25</b>
3.1	Objectives of the Experiment	25
3.2	Stages in Experimental Research	28
3.3	The Optimization of Yield	31
3.4	Further Reading	33
<b>4</b>	<b>The Choice of a Model</b>	<b>34</b>
4.1	Linear Models for One Factor	34
4.2	Non-linear Models	38
4.3	Interaction	39
4.4	Response Surface Models	42
<b>5</b>	<b>Models and Least Squares</b>	<b>45</b>
5.1	Simple Regression	45
5.2	Matrices and Experimental Design	48
5.3	Least Squares	52
5.4	Further Reading	57
<b>6</b>	<b>Criteria for a Good Experiment</b>	<b>58</b>
6.1	Aims of a Good Experiment	58
6.2	Confidence Regions and the Variance of Prediction	59
6.3	Contour Plots of Variances for Two-Factor Designs	65

6.4	Variance–Dispersion Graphs	67
6.5	Some Criteria for Optimum Experimental Designs	69
<b>7</b>	<b>Standard Designs</b>	<b>72</b>
7.1	Introduction	72
7.2	$2^m$ Factorial Designs	72
7.3	Blocking $2^m$ Factorial Designs	75
7.4	$2^{m-f}$ Fractional Factorial Designs	76
7.5	Plackett–Burman Designs	79
7.6	Composite Designs	80
7.7	Standard Designs in SAS	83
7.8	Further Reading	87
<b>8</b>	<b>The Analysis of Experiments</b>	<b>88</b>
8.1	Introduction	88
8.2	Example 1.1 Revisited: The Desorption of Carbon Monoxide	89
8.3	Example 1.2 Revisited: The Viscosity of Elastomer Blends	94
8.4	Selecting Effects in Saturated Fractional Factorial Designs	99
8.5	Robust Design	104
8.6	Analysing Data with SAS	111
<b>PART II THEORY AND APPLICATIONS</b>		<b>117</b>
<b>9</b>	<b>Optimum Design Theory</b>	<b>119</b>
9.1	Continuous and Exact Designs	119
9.2	The General Equivalence Theorem	122
9.3	Exact Designs and the General Equivalence Theorem	125
9.4	Algorithms for Continuous Designs and the General Equivalence Theorem	127
9.5	Function Optimization and Continuous Design	128
9.6	Finding Continuous Optimum Designs Using SAS/IML Software	131
<b>10</b>	<b>Criteria of Optimality</b>	<b>135</b>
10.1	A-, D-, and E-optimality	135
10.2	$D_A$ -optimality (Generalized D-optimality)	137
10.3	$D_S$ -optimality	138
10.4	c-optimality	142
10.5	Linear Optimality: C- and L-optimality	142

10.6	V-optimality: Average Variance	143
10.7	G-optimality	143
10.8	Compound Design Criteria	144
10.9	Compound $D_A$ -optimality	145
10.10	D-optimum Designs for Multivariate Responses	145
10.11	Further Reading and Other Criteria	147
<b>11</b>	<b>D-optimum Designs</b>	151
11.1	Properties of D-optimum Designs	151
11.2	The Sequential Construction of Optimum Designs	153
11.3	An Example of Design Efficiency: The Desorption of Carbon Monoxide. Example 1.1 Continued	160
11.4	Polynomial Regression in One Variable	161
11.5	Second-order Models in Several Variables	163
11.6	Further Reading	167
<b>12</b>	<b>Algorithms for the Construction of Exact D-optimum Designs</b>	169
12.1	Introduction	169
12.2	The Exact Design Problem	170
12.3	Basic Formulae for Exchange Algorithms	172
12.4	Sequential Algorithms	175
12.5	Non-sequential Algorithms	176
12.6	The KL and BLKL Exchange Algorithms	177
12.7	Example 12.2: Performance of an Internal Combustion Engine	179
12.8	Other Algorithms and Further Reading	181
<b>13</b>	<b>Optimum Experimental Design with SAS</b>	184
13.1	Introduction	184
13.2	Finding Exact Optimum Designs Using the OPTEX Procedure	184
13.3	Efficiencies and Coding in OPTEX	187
13.4	Finding Optimum Designs Over Continuous Regions Using SAS/IML Software	189
13.5	Finding Exact Optimum Designs Using the ADX Interface	191
<b>14</b>	<b>Experiments with Both Qualitative and Quantitative Factors</b>	193
14.1	Introduction	193
14.2	Continuous Designs	195

14.3	Exact Designs	197
14.4	Designs with Qualitative Factors in SAS	201
14.5	Further Reading	204
<b>15</b>	<b>Blocking Response Surface Designs</b>	<b>205</b>
15.1	Introduction	205
15.2	Models and Design Optimality	205
15.3	Orthogonal Blocking	210
15.4	Related Problems and Literature	213
15.5	Optimum Block Designs in SAS	215
<b>16</b>	<b>Mixture Experiments</b>	<b>221</b>
16.1	Introduction	221
16.2	Models and Designs for Mixture Experiments	222
16.3	Constrained Mixture Experiments	225
16.4	Mixture Experiments with Other Factors	231
16.5	Blocking Mixture Experiments	237
16.6	The Amount of a Mixture	240
16.7	Optimum Mixture Designs in SAS	243
16.8	Further Reading	247
<b>17</b>	<b>Non-linear Models</b>	<b>248</b>
17.1	Some Examples	248
17.2	Parameter Sensitivities and D-optimum Designs	251
17.3	Strategies for Local Optimality	257
17.4	Sampling Windows	259
17.5	Locally c-optimum Designs	261
17.6	The Analysis of Non-linear Experiments	266
17.7	A Sequential Experimental Design	267
17.8	Design for Differential Equation Models	270
17.9	Multivariate Designs	275
17.10	Optimum Designs for Non-linear Models in SAS	277
17.11	Further Reading	286
<b>18</b>	<b>Bayesian Optimum Designs</b>	<b>289</b>
18.1	Introduction	289
18.2	A General Equivalence Theorem Incorporating Prior Information	292
18.3	Bayesian D-optimum Designs	294
18.4	Bayesian c-optimum Designs	302
18.5	Sampled Parameter Values	304
18.6	Discussion	310

<b>19 Design Augmentation</b>	312
19.1 Failure of an Experiment	312
19.2 Design Augmentation and Equivalence Theory	314
19.3 Examples of Design Augmentation	316
19.4 Exact Optimum Design Augmentation	326
19.5 Design Augmentation in SAS	326
19.6 Further Reading	328
<b>20 Model Checking and Designs for Discriminating Between Models</b>	329
20.1 Introduction	329
20.2 Parsimonious Model Checking	329
20.3 Examples of Designs for Model Checking	333
20.4 Example 20.3. A Non-linear Model for Crop Yield and Plant Density	338
20.5 Exact Model Checking Designs in SAS	344
20.6 Discriminating Between Two Models	347
20.7 Sequential Designs for Discriminating Between Two Models	353
20.8 Developments of T-optimality	356
20.9 Nested Linear Models and $D_S$ -optimum Designs	359
20.10 Exact T-optimum Designs in SAS	363
20.11 The Analysis of T-optimum Designs	365
20.12 Further Reading	366
<b>21 Compound Design Criteria</b>	367
21.1 Introduction	367
21.2 Design Efficiencies	368
21.3 Compound Design Criteria	368
21.4 Polynomials in One Factor	370
21.5 Model Building and Parameter Estimation	372
21.6 Non-linear Models	378
21.7 Discrimination Between Models	381
21.8 DT-Optimum Designs	385
21.9 CD-Optimum Designs	389
21.10 Optimizing Compound Design Criteria in SAS	391
21.11 Further Reading	393
<b>22 Generalized Linear Models</b>	395
22.1 Introduction	395
22.2 Weighted Least Squares	396
22.3 Generalized Linear Models	397

22.4	Models and Designs for Binomial Data	398
22.5	Optimum Design for Gamma Models	410
22.6	Designs for Generalized Linear Models in SAS	414
22.7	Further Reading	416
<b>23</b>	<b>Response Transformation and Structured Variances</b>	<b>418</b>
23.1	Introduction	418
23.2	Transformation of the Response	419
23.3	Design for a Response Transformation	421
23.4	Response Transformations in Non-linear models	426
23.5	Robust and Compound Designs	431
23.6	Structured Mean-Variance Relationships	433
<b>24</b>	<b>Time-dependent Models with Correlated Observations</b>	<b>439</b>
24.1	Introduction	439
24.2	The Statistical Model	440
24.3	Numerical Example	441
24.4	Multiple Independent Series	442
24.5	Discussion and Further Reading	447
<b>25</b>	<b>Further Topics</b>	<b>451</b>
25.1	Introduction	451
25.2	Crossover Designs	452
25.3	Biased-coin Designs for Clinical Trials	455
25.4	Adaptive Designs for Clinical Trials	460
25.5	Population Designs	464
25.6	Designs Over Time	469
25.7	Neural Networks	470
25.8	In Brief	471
<b>26</b>	<b>Exercises</b>	<b>473</b>
	<b>Bibliography</b>	<b>479</b>
	<b>Author Index</b>	<b>503</b>
	<b>Subject Index</b>	<b>507</b>
