Contents

Preface 5

Stanislav Bartoň
Dynamics of an artificial slope 9

Jan Chleboun, Lenka Dohnalová, Judita Runcziková
On models of long-term behavior of concrete 21

Dana Černá
Wavelet method for option pricing under the two-asset Merton jump-diffusion model 30

Cyril Fischer, Jiří Náprstek
Numerical solution of a stochastic model of a ball-type vibration absorber 40

Marta Hlavová
Curve reconstruction from a set of measured points 50

Alexej Kolcun, Stanislav Sysala
RTIN-based strategies for local mesh refinement 59

Václav Kučera, Mária Lukáčová-Medviďová, Sebastian Noelle, Jochen Schütz
Low-Mach consistency of a class of linearly implicit schemes for the compressible Euler equations 69

Nikola Pajerová, Ivana Linkeová
Triangular mesh analysis with application on hip bone 79

Štěpán Papáček, Volodymyr Lynnyk, Branislav Rehák
Regulatory network of drug-induced enzyme production: parameter estimation based on the periodic dosing response measurement 89

Jan Pech
Spectral/hp elements in fluid structure interaction 98

Branislav Rehák
A numerical method for the solution of the nonlinear observer problem 110

Adam Rychtář, Štěpán Klapka, Lucie Kárná
Calculation of the detection properties in the binary symmetrical channel 120

Karel Segeth
Data approximation using polyharmonic radial basis functions 129

Miroslav Trcala, Ivan Němec, Adéla Vaněčková, Filip Hokeš
Dynamic analysis of viscous material models 139

Lukáš Vacek, Václav Kučera
Construction of fluxes at junctions for the numerical solution of traffic flow models on networks 149

Miloslav Vlasák, Jan Lamač
Save our stones – hysteresis phenomenon in porous media 159

List of participants 168
