57 Item response theory and differential item functioning	661
58 7.1 Introduction	661
59 7.2 Item characteristic curves	661
60 7.3 Logistic models	663
61 7.4 Item response theory models: tips	665
62 7.5 IRT versus traditional and Guttman scales	665
63 7.6 Polytomous item response theory models	672
64 7.7 Differential item functioning	672
65 Preface to the second edition	xv
66 Preface to the first edition	xvii
67 List of abbreviations	xix
68 Item banks, item linking and computer-adaptive testing	xxi
<b>PART A INTRODUCTION</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
1.1 Patient-reported outcomes	3
1.2 What is <i>quality of life</i> ?	4
1.3 Historical development	5
1.4 Why measure quality of life?	8
1.5 Which clinical trials should assess quality of life?	17
1.6 How to measure quality of life	17
1.7 Instruments	19
1.8 Conclusions	30
<b>2 Principles of measurement scales</b>	<b>31</b>
2.1 Introduction	31
2.2 Scales and items	31
2.3 Constructs and latent variables	32
2.4 Indicator variables and causal variables	33
2.5 Single global questions versus multi-item scales	35
2.6 Single-item versus multi-item scales	38
2.7 Psychometrics and item response theory	40
2.8 Psychometric versus clinimetric scales	44
2.9 Sufficient causes and necessary causes	45
2.10 Discriminative, evaluative and predictive instruments	46
2.11 Measuring quality of life: indicator or causal items?	46
2.12 Conclusions	47
<b>PART B Developing and Testing Questionnaires</b>	<b>49</b>
<b>3 Developing a questionnaire</b>	<b>51</b>
3.1 Introduction	51
3.2 General issues	52

3.3	Defining the target population	52
3.4	Item generation	53
3.5	Qualitative methods	55
3.6	Forming scales	58
3.7	Multi-item scales	62
3.8	Wording of questions	63
3.9	Face and content validity of the proposed questionnaire	64
3.10	Pre-testing the questionnaire	64
3.11	Strategies for validation	67
3.12	Translation	68
3.13	Field-testing	69
3.14	Conclusions	74
3.15	Further reading	75
<b>4</b>	<b>Scores and measurements: validity, reliability, sensitivity</b>	<b>77</b>
4.1	Introduction	77
4.2	Content validity	78
4.3	Criterion validity	81
4.4	Construct validity	83
4.5	Reliability	91
4.6	Sensitivity and responsiveness	101
4.7	Conclusions	107
<b>5</b>	<b>Multi-item scales</b>	<b>109</b>
5.1	Introduction	109
5.2	Significance tests	110
5.3	Correlations	111
5.4	Construct validity	116
5.5	Cronbach's $\alpha$ and internal consistency	123
5.6	Implications for causal items	127
5.7	Conclusions	129
<b>6</b>	<b>Factor analysis and structural equation modelling</b>	<b>131</b>
6.1	Introduction	131
6.2	Correlation patterns	132
6.3	Path diagrams	134
6.4	Factor analysis	136
6.5	Factor analysis of the HADS questionnaire	136
6.6	Uses of factor analysis	141
6.7	Applying factor analysis: choices and decisions	143
6.8	Assumptions for factor analysis	149
6.9	Factor analysis in QoL research	153
6.10	Limitations of correlation-based analysis	154
6.11	Causal models	155
6.12	Confirmatory factor analysis and structural equation modelling	158
6.13	Conclusions	159
6.14	Further reading, and software	160

<b>7 Item response theory and differential item functioning</b>	<b>161</b>
7.1 Introduction	161
7.2 Item characteristic curves	163
7.3 Logistic models	165
7.4 Fitting item response theory models: tips	172
7.5 Test design	173
7.6 IRT versus traditional and Guttman scales	174
7.7 Polytomous item response theory models	175
7.8 Differential item functioning	176
7.9 Quantifying differential item functioning	185
7.10 Exploring differential item functioning: tips	185
7.11 Conclusions	187
7.12 Further reading, and software	187
<b>8 Item banks, item linking and computer-adaptive tests</b>	<b>189</b>
8.1 Introduction	189
8.2 Item bank	191
8.3 Item calibration	193
8.4 Item linking and test equating	194
8.5 Test information	196
8.6 Computer-adaptive testing	198
8.7 Stopping rules and simulations	200
8.8 Computer-adaptive testing software	201
8.9 Unresolved issues	202
8.10 Computer-assisted tests	204
8.11 Conclusions	205
8.12 Further reading	205
<b>PART C Clinical Trials</b>	<b>207</b>
<b>9 Choosing and scoring questionnaires</b>	<b>209</b>
9.1 Introduction	209
9.2 Generic versus specific	210
9.3 Finding instruments	211
9.4 Choice of instrument	211
9.5 Adding ad-hoc items	215
9.6 Scoring multi-item scales	215
9.7 Conclusions	222
9.8 Further reading	222
<b>10 Clinical trials</b>	<b>223</b>
10.1 Introduction	223
10.2 Basic design issues	224
10.3 Compliance	225
10.4 Administering a quality-of-life assessment	231

10.5	Recommendations for writing protocols	233
10.6	Standard operating procedures	243
10.7	Summary and checklist	244
<b>11</b>	<b>Sample sizes</b>	<b>247</b>
11.1	Introduction	247
11.2	Significance tests, <i>p</i> -values and power	248
11.3	Estimating sample size	248
11.4	Comparing two groups	252
11.5	Comparison with a reference population	262
11.6	Equivalence studies	263
11.7	Choice of sample size method	265
11.8	Multiple endpoints	267
11.9	Specifying the target difference	267
11.10	Sample size estimation is pre-study	268
11.11	Attrition	268
11.12	Conclusion	269
11.13	Further reading	269
<b>PART D</b>	<b>Analysis of QoL Data</b>	<b>271</b>
<b>12</b>	<b>Cross-sectional analysis</b>	<b>273</b>
12.1	Types of data	273
12.2	Comparing two groups	276
12.3	Adjusting for covariates	285
12.4	Changes from baseline	290
12.5	Analysis of variance	291
12.6	Analysis of variance models	296
12.7	Graphical summaries	297
12.8	Endpoints	303
12.9	Conclusions	303
<b>13</b>	<b>Exploring longitudinal data</b>	<b>305</b>
13.1	Area under the curve	305
13.2	Graphical presentations	308
13.3	Tabular presentations	320
13.4	Reporting	322
13.5	Conclusions	326
<b>14</b>	<b>Modelling longitudinal data</b>	<b>329</b>
14.1	Preliminaries	329
14.2	Auto-correlation	330
14.3	Repeated measures	335
14.4	Other situations	351
14.5	Modelling versus area under the curve	352
14.6	Conclusions	353

<b>15 Missing data</b>	<b>355</b>
15.1 Introduction	Effect size and meta-analysis
15.2 Types of missing data	Predictive validity
15.3 Why do missing data matter?	Number needed to treat
15.4 Missing items	Conclusion
15.5 Methods for missing items within a form	Further reading
15.6 Missing forms	Meta-analysis
15.7 Methods for missing forms	Intervention
15.8 Comments	Beginning outcomes
15.9 Degrees of freedom	Outcome
15.10 Sensitivity analysis	Missing outcome
15.11 Conclusions	Interventions
15.12 Further reading	Assessment quality
	Summary trial results
	Measures of treatment effect
	Combining studies
	Forest plot
	Heterogeneity
	Publication bias and funnel plot
	Conclusions
	Further reading
	Appendix - Examples of instruments
<b>16 Practical and reporting issues</b>	<b>385</b>
16.1 Introduction	Sequence impact (SIP)
16.2 The reporting of design issues	Nottingham Health Profile (NHP)
16.3 Data analysis	Health survey screening version (HSS)
16.4 Elements of good graphics	Enquiry (EQ-5D)
16.5 Some errors	A 6-Item Generic Index of health (AGI)
16.6 Guidelines for reporting	EuroQol (EQ-5D)
16.7 Further reading	Cancer QoL-C30 (CQL-QoL-C30)
	EORTC peak and neck weights (EORTC-PNW)
	Functional Assessment of Cancer - General (FACT-G)
	Rotterdam Symptom Checklist (RSC)
	Quality of life in epilepsy (QOLE)
	Psychiatric Assessments of Life Outcomes (PALO)
<b>PART E Beyond Clinical Trials</b>	<b>403</b>
<b>17 Quality-adjusted survival</b>	<b>405</b>
17.1 Introduction	Utilities - specific instruments
17.2 Preferences and utilities	Sequence impact profile (SIP)
17.3 Multi-attribute utility measures	Nottingham Health Profile (NHP)
17.4 Utility-based instruments	Health survey screening version (HSS)
17.5 Quality-adjusted life years	Enquiry (EQ-5D)
17.6 Q-TWiST	A 6-Item Generic Index of health (AGI)
17.7 Sensitivity analysis	Cancer QoL-C30 (CQL-QoL-C30)
17.8 Prognosis and variation with time	EORTC peak and neck weights (EORTC-PNW)
17.9 Healthy-years equivalent	Functional Assessment of Cancer - General (FACT-G)
17.10 Conclusions	Rotterdam Symptom Checklist (RSC)
	Quality of life in epilepsy (QOLE)
	Psychiatric Assessments of Life Outcomes (PALO)
<b>18 Clinical interpretation</b>	<b>427</b>
18.1 Introduction	Utilities - specific instruments
18.2 Statistical significance	Sequence impact profile (SIP)
18.3 Absolute levels and changes over time	Nottingham Health Profile (NHP)
18.4 Threshold values: percentages	Health survey screening version (HSS)
18.5 Population norms	Enquiry (EQ-5D)
18.6 Minimal clinically important difference	Multidimensional fatigue inventory (MDI-SF)
18.7 Impact of state of quality of life	Short-form McGill pain questionnaire (SF-MPQ)
18.8 Changes in relation to life events	Multidimensional fatigue inventory (MDI-SF)
18.9 Effect size	Impact index

18.10	Effect sizes and meta-analysis	450
18.11	Patient variability	451
18.12	Number needed to treat	452
18.13	Conclusions	454
18.14	Further reading	455
<b>19</b>	<b>Meta-analysis</b>	<b>457</b>
19.1	Introduction	457
19.2	Defining objectives	458
19.3	Defining outcomes	458
19.4	Literature searching	459
19.5	Assessing quality	459
19.6	Summarising results	463
19.7	Measures of treatment effect	464
19.8	Combining studies	468
19.9	Forest plot	471
19.10	Heterogeneity	472
19.11	Publication bias and funnel plots	474
19.12	Conclusions	475
19.13	Further reading	475
<b>Appendix – Examples of Instruments</b>		<b>477</b>
<b>Generic instruments</b>		<b>479</b>
E1	Sickness Impact Profile (SIP)	479
E2	Nottingham Health Profile (NHP)	481
E3	Health survey standard version (SF-36v2)	482
E4	EuroQol (EQ-5D)	485
E5	A Patient Generated Index of quality of life (PGI)	487
<b>Disease-specific instruments</b>		<b>489</b>
E6	European Organisation for Research and Treatment of Cancer QLQ-C30 (EORTC QLQ-C30)	489
E7	EORTC head and neck module (EORTC QLQ-H&N35)	491
E8	Functional Assessment of Cancer – General version (FACT-G)	493
E9	Rotterdam Symptom Checklist (RSCL)	495
E10	Quality of Life in Epilepsy (QOLIE-89)	497
E11	Paediatric Asthma Quality of Life Questionnaire (PAQLQ)	501
<b>Domain-specific instruments</b>		<b>503</b>
E12	Hospital Anxiety and Depression Scale (HADS)	503
E13	Short-form McGill Pain Questionnaire (SF-MPQ)	504
E14	Multidimensional Fatigue Inventory (MFI-20)	505
<b>ADL and disability</b>		<b>507</b>
E15	Barthel Index of Disability (modified) (BI)	507

**Appendix – Statistical tables** **509**

T1	Normal distribution	509
T2	Probability points of the normal distribution	511
T3	Student's <i>t</i> -distribution	512
T4	The $\chi^2$ distribution	513
T5	The <i>F</i> -distribution	514

**References** **515**

We have been gratified by the reception of the first edition of this book, and this new **Index** offers the opportunity to respond to the many suggestions we have received for further improving and clarifying certain sections. In most cases the changes have meant expanding the text, to reflect new developments in research.

Chapters have been reorganised, to follow a more logical sequence for teaching. Thus sample size estimation has been moved to Part C, Clinical Trials, because it is needed for trial design. In the first edition it followed the chapters about analysis where we discussed choice of statistical tests, because the sample size computation depends on the test that will be used.

Health-related quality of life is a rapidly evolving field of research, and this is illustrated by shifting names and identity: quality of life (QoL) outcomes are now also commonly called patient- (or person-) reported outcomes (PROs) to reflect more clearly that symptoms and side effects of treatment are included in the assessments; we have adopted that term as part of the subtitle. Drug regulatory bodies have also endorsed this terminology, with the USA Food and Drug Administration (FDA) bringing out guidance notes concerning the use of PROs in clinical trials for new drug applications; this new edition reflects the FDA (draft) recommendations.

Since the first edition of this book there have been extensive developments in item response theory and, in particular, computer-adaptive testing; these are addressed in a new chapter. Another area of growth has been in systematic reviews and meta-analysis, as evinced by the formation of a Quality of Life Methods Group by the Cochrane Collaboration. QoL presents some particular challenges for meta-analyses, and this led us to include the final chapter.

We are very grateful to the numerous colleagues who reported finding this book useful, some of whom also offered constructive advice for this second edition.

Peter M. Fayers and David Machin
