

## CONTENTS

1.	Similarity models: statistical tools and problems in using them by <b>T. M. Krygowski and K. Woźniak</b> . . . . .	1
2.	Substituent effect parameters and models applied in organic chemistry by <b>J. Shorter</b> . . . . .	77
3.	The transmission of substituent effects in organic systems by <b>M. Godfrey</b> . . . . .	149
4.	Properties of hydrogen as a substituent in planar organic pi-systems by <b>G. Häfelinger</b> . . . . .	177
5.	Similarity models in IR and UV spectroscopy by <b>C. Laurence</b> . . . . .	231
6.	Description of properties of binary solvent mixtures by <b>H. Langhals</b> . . . . .	283
7.	Additivity rules and correlation methods in gas chromatography by <b>J. Oszczapowicz</b> . . . . .	343
8.	Similarity models in organic electrochemistry by <b>J. S. Jaworski and M. K. Kalinowski</b> . . . . .	387
9.	Principal component analysis as a tool in organic chemistry and food chemistry by <b>R. I. Zalewski</b> . . . . .	455
10.	Quantitative structure-activity relationships by <b>D. J. Livingstone</b> . . . . .	557
11.	The quantitative description of steric effects by <b>M. Charton</b> . . . . .	629
	Index . . . . .	689
