Foreword xvii

Preface xix

Acknowledgments xxiii

1 Basic Properties of Organic Molecular Crystals 1

Part 1A
Characteristic Features of Organic Molecular Crystals

1A.1. Introduction *1*

1A.2. Role of the Properties of Molecules. Molecular Arrangement *7*

1A.3. Crystal Structure of Some Model Compounds *10*

1A.3.1. Linear Polyacenes. A-type Lattice, 10

1A.3.2. Pyrene and Perylene. B-type Lattice, 13

1A.3.3. Phthalocyanines, 15

1A.4. Some Dynamic Properties of Organic Molecules and Crystals *20*

1A.4.1. Intramolecular Vibrations, 20

1A.4.2. Lattice Vibrations, 22

1A.5. Molecular Interaction Forces in OMC. Molecular and Solid-State Approaches *25*

Part 1B
Hamiltonian Description of Interaction Phenomena in Organic Molecular Crystals

1B.1. Hamiltonian of an Isolated Molecule; Rigid (Crude) and Dynamic (Adiabatic) Representations *30*

1B.2. Hamiltonian of a Molecular Crystal; Molecular Excitons *33*

1B.3. Electrons and Holes in Molecular Crystals *45*

1B.4. Electron–Exciton Coupling; Electronic Polaron Around the Electron *48*

1B.5. Hole–Exciton Coupling: Electronic Polaron Around the Hole *50*

1B.6. Combined Exciton–Electron-Hole Interaction *51*

1B.7. Coupling of Excitons, Electrons, and Holes to Phonons *51*

1B.8. Lattice Polaron Around Electrons, Holes, and Excitons *54*

2 Exciton Interaction with Local Lattice Environment 60

2.1. Excitons in Anthracene-Type Crystals *60*

2.2. Excitonic Polaron: Adiabatic Versus Crude Representation. Exciton Self-Trapping *66*

2.2.1. Traditional Treatment in Terms of Adiabatic Approximation, 66

2.2.2. Exciton Self-trapping in the Crude Representation, 74

2.3. Absorption and Scattering of Light by the Exciton-Phonon System *76*

2.4. The Urbach–Martienssen Rule *77*

3 Charge Carrier Interaction with Local Lattice Environment 83

3.1. Conditions of Charge Carrier Localization and Delocalization *84*

3.2. Band Model of Single-Electron Approximation *86*

3.2.1. General Scheme of the Model. Bloch Function, 86

3.2.2. Results of Calculations of the Band Structure of Ac-Type Crystals, 89

3.2.3. Applicability of a Single-Electron Band Model Approximation, 90

3.3. Electronic Polarization in OMC. Phenomenological Representation *96*

3.4. Dynamic Approaches to Electronic Polarization in OMC *101*

3.4.1. Correspondence Between Dynamic and Microelectrostatic Approaches, 101

3.4.2. Quantum Corrections to the Polarization Energies, 105

3.5. Microelectrostatic Methods of Electronic Polarization Energy Calculations in OMC *106*

3.5.1. Direct Non-self-consistent Methods, 106

3.5.2. Method of Self-consistent Polarization Field (SCPF), 109

3.5.3. Method of Fourier Transformation, 111

3.5.4. Fourier Transformation Method and Submolecular Approach, 114

3.5.5. Charge Carrier Interaction with Permanent Quadrupole Moments of Surrounding Molecules, 116

3.5.6. Evaluation of Total Effective Polarization Energy Using Calculated and Experimental Energy Parameters, 119

3.5.7. Possible Improvements and Corrections, 124

3.6. Charge Carrier Interaction with Intra- and Intermolecular Vibrations. Molecular and Lattice Polarons *125*

3.6.1. Molecular (Vibronic) and Lattice Polarization Phenomena —a Phenomenological Approach, 125

3.6.2. Hamiltonian Description of the Formation of Molecular and Lattice Polarons Around Charge Carriers, 133

4 Energy Structure of Polaron States in OMC 142

4.1. Adiabatic Energy Gap *143*

4.2. Optical Energy Gap *152*

4.3. The Energy Structure of Polaron States in OMC *159*

4.4. Bounded Electronic and Molecular Polarons. Charge Transfer (CT) and Charge Pair (CP) States *169*

4.5. Energy Structure of Polaron States in an Ideal (Perfect) Crystal. A Synopsis *180*

4.6. Energy Structure of Local States in Real (Imperfect) OMC *181*

4.6.1. Local States of Structural Origin, 181

4.6.2. Local States of Chemical Impurity Origin, 190

4.6.3. Experimental Methods of Local State Studies, 193

4.7. Energy Structure of Electronic States in Langmuir–Blodgett (LB) Multilayers *194*

4.8. Conclusions on Electronic States in Real (Defective) Organic Crystals 198

5 Exciton and Charge Carrier Transport Phenomena 199

5.1. Some Characteristic Features of Transport Phenomena in Organic Crystals 199

5.2. Coherent and Diffusive Motion of Excitons and Charge Carriers 201

5.3. Stochastic Liouville Equation Model 205

5.4. Generalized Master Equations and Generalized Stochastic Liouville Equation Model 212

5.5. Applicability of the Stochastic Liouville Equation and Generalized Stochastic Liouville Equation Models 219

5.6. Generalized Master Equation Theories with Diagonalizing Projector 221

5.7. Relation Between the Kenkre-Knox and the Förster–Dexter Theories 229

5.8. Relation to the Continuous-Time-Random-Walk (CTRW) Method 231

5.9. Diffusivity of Excitons and Charge Carriers in Molecular Crystals in Terms of GME 233

5.10. GME and Partitioning Projectors; Trapping, Sinks, and Finite-Lifetime Effects 237

5.11. Coherence and Quantum Yield of Exciton Transfer 240

5.12. Methods of Solution of Time-Convolution GME 241

5.13. Grover and Silbey and Munn and Silbey Theories 242

5.14. Some Other Methods and Topics 248

5.15. Hot Unthermalized Charge Carriers and the Fokker-Planck Equation 249

5.16. Phenomenological Approaches 251

6 Charge Carrier Photogeneration and Separation Mechanisms in OMC 254

6.1. Basic Photogeneration Mechanisms at the Near-threshold Spectral Region 255

6.2. Experimental Investigation of Photogeneration Processes in Some Model OMC 261

6.2.1. Description of Experimental Methods, 261

6.2.2. Determination of the Mean Thermalization Length r_{th} in Polyacene Crystals, 263

6.2.3. Approximation of Photoconductivity Quantum Efficiency $\eta(h\nu)$ Curves, 266

6.2.4. The CP State Population Pathways. Competitive and Complementary Channels, 270

6.2.5. Some General Characteristics of the Autoionization Mechanism, 275

6.2.6. Temperature Dependence of the Mean Thermalization Length r_{th}, 287

6.2.7. Electric Field Dependence of the Mean Thermalization Length r_{th}, 288

6.2.8. The Fast Photocurrent Pulse, 291

6.2.9. Brief Survey of Electric Field-Dependent Electronic Processes in OMC, 292

6.3. Computer Simulation of the Photogenerated Charge Carrier Separation Processes in OMC *294*

6.3.1. Description of the Model, 295

6.3.2. Parameterization of the Model, 297

6.3.3. Simulation Results. Comparison with Experiment, 300

6.3.4. Discussion of the Simulation Results, 312

7 Charge Carrier Transport Processes in OMC 318

7.1. Experimental Determination of Charge Carrier Transport Characteristics and Parameters *318*

7.1.1. Some General Problems and Specific Features, 318

7.1.2. Methodology of Experimental Measurements, 322

7.1.3. Experimental Charge Carrier Transport Characteristics. Field-Generated Hot Carriers, 326

7.2. Computer Simulation of Charge Carrier Transport Characteristics *340*

7.2.1. Some General Considerations, 340

7.2.2. Simulation Procedure and Model Considerations, 342

7.2.3. Simulation Results and Their Interpretation, 345

7.3. Model Description of Charge Carrier Transport Phenomena in OMC. Advantages and Limitations *368*

7.4. Impact of Local Trapping States in Real OMC on the Charge Carrier Transport Characteristics *372*

7.5. Possible Charge Carrier Transport Mechanisms in LB Multilayers *374*

8 Epilogue: Summing Up and Looking Ahead 378
