Andrew J. Gross, Michael Holzinger, Serge Cosnier

1 Buckypapers for bioelectrochemical applications — 1

- 1.1 Introduction to buckypapers for bioelectrochemistry — 1
- 1.2 Biological fuel cell devices — 3
 - 1.2.1 Implantable enzymatic biofuel cells — 4
 - 1.2.2 Wearable enzymatic biofuel cells — 5
 - 1.2.3 Portable enzymatic biofuel cells — 7
 - 1.2.4 Microbial biofuel cells — 11
- 1.3 Biosensors — 13
- 1.4 Biosynthesis — 15
- 1.5 Biologic — 16
- 1.6 Conclusion — 17
- References — 18

Alan Le Goff, Fabien Giroud

2 Molecular electrocatalysts for carbon-based biofuels, H₂ and O₂ activation: an alternative to precious metals and enzymes in fuel cells — 23

- 2.1 Introduction — 23
- 2.2 Bioinspired complexes for hydrogen/O₂ fuel cells — 23
 - 2.2.1 Molecular catalysts for H₂ oxidation — 24
 - 2.2.2 Bioinspired complexes for O₂ reduction — 27
 - 2.2.3 Integration in fuel cells — 30
 - 2.3 Molecular catalysts for oxidation of alcohols and aldehydes — 30
 - 2.3.1 Organic electrocatalysts — 30
 - 2.3.2 Inorganic electrocatalysts — 36
 - 2.4 Conclusion — 37
 - References — 38

Issei Otsuka, Redouane Borsali

3 Electrospun biomaterials — 45

- 3.1 Electrospinning and its applications to soft matter — 45
- 3.2 Biopolymers and electrospinning — 45
 - 3.2.1 Introduction — 45
 - 3.2.2 Coelectrospinning of polysaccharides with other polymers — 46
 - 3.2.3 Electrospinning of polysaccharide derivatives — 47
 - 3.2.4 Direct electrospinning of native polysaccharides — 49
- 3.3 Block copolymers and electrospinning — 51

- 3.3.1 Introduction — 51
- 3.3.2 Electrospinning of block copolymers — 51
- 3.3.3 Phase separation of electrospun block copolymer fibers — 52
- References — 54

Seiya Tsujimura

- 4 Porous carbon materials for enzymatic fuel cells — 59**
 - 4.1 Introduction: designing porous carbon electrodes — 59
 - 4.2 Nanostructured carbon-based electrodes — 61
 - 4.2.1 Nanomaterials — 61
 - 4.2.2 Carbon blacks — 62
 - 4.3 Pore-size-controlled carbons — 64
 - 4.3.1 Mesoporous carbon — 64
 - 4.3.2 Mesoporous silica-templated carbon — 65
 - 4.3.3 Carbon gels — 66
 - 4.3.4 MgO-templated carbon — 68
 - 4.4 Hierarchically structured carbon electrodes — 70
 - 4.4.1 Introduction — 70
 - 4.4.2 Mesoporous carbon formed on macrostructured carbon — 70
 - 4.4.3 Carbon particles deposited using electrophoretic deposition — 71
 - 4.4.4 Hierarchically structured porous carbon made from the dual-templated method — 72
 - 4.5 Conclusions — 73
 - References — 73

Huangxian Ju

- 5 DNA assembly for electrochemical biosensing — 77**
 - 5.1 Introduction — 77
 - 5.2 DNA structure transformation for electrochemical biosensing — 78
 - 5.2.1 Stem-loop structure — 79
 - 5.2.2 Tetrahedral DNA structure — 79
 - 5.2.3 Triplex DNA — 81
 - 5.2.4 G-quadruplex — 82
 - 5.3 Principles of DNA assembly amplification in electrochemical biosensing — 83
 - 5.3.1 Rolling circle amplification — 84
 - 5.3.2 Enzymatic cleavage amplification — 86
 - 5.3.3 Strand displacement amplification — 88
 - 5.3.4 Catalytic hairpin assembly — 92
 - 5.3.5 Hybridization chain reaction — 94
 - 5.4 Conclusions — 95
 - References — 96

Laurent Bouffier, Neso Sojic, Alexander Kuhn

6 Biochemical sensing based on bipolar electrochemistry — 101

- 6.1 Introduction — 101
- 6.1.1 Generalities — 101
- 6.1.2 Principle of BPE — 102
- 6.1.3 Open versus closed configurations — 104
- 6.1.4 Analytical strategies — 105
- 6.2 Open configuration — 106
- 6.2.1 Detection by ECL — 106
- 6.2.2 Other reporting strategies — 109
- 6.2.3 Interplay with electrophoretic properties — 111
- 6.3 Closed configuration — 112
- 6.4 Conclusion and perspectives — 115
- References — 116

Dan Shan, Wen-Rong Cai

7 Biomaterials for electrochemiluminescence — 121

- 7.1 Introduction — 121
- 7.2 Principle of ECL — 121
- 7.2.1 Annihilation pathway — 121
- 7.2.2 Coreactant pathway — 123
- 7.3 Luminophore for ECL — 124
- 7.3.1 Luminol — 124
- 7.3.2 Tris(2,2'-bipyridyl)ruthenium (II) — 126
- 7.3.3 Porphyrin — 126
- 7.3.4 Quantum dots — 130
- 7.4 Enhancement strategies — 131
- 7.4.1 Nanomaterials for signal amplification — 131
- 7.4.2 Resonance energy transfer (RET) — 133
- 7.5 ECL for assay in biological matrices — 133
- 7.5.1 Direct interaction — 133
- 7.5.2 Competition assay — 134
- 7.5.3 Sandwich-type assay — 135
- 7.6 Conjugation strategies — 136
- References — 138

Evgeny Katz

8 Signal-activated biomolecular release from alginate-modified electrodes — 143

- 8.1 Introduction – signal-activated biomolecular release processes — 143

- 8.2 Alginate polymer cross-linked with Fe^{3+} cations – a convenient matrix for molecular release stimulated by electrochemical signal — **143**
- 8.3 Self-operating release systems based on the alginate electrodes integrated with biosensing electrodes — **147**
- 8.4 Conclusion and perspectives — **160**
References — **161**

You Yu, Shaojun Dong

- 9 Self-powered electrochemical biosensors — 167**
- 9.1 Introduction — **167**
- 9.2 Positive enhanced effect — **170**
 - 9.2.1 Positive substrate effect on enzyme — **170**
 - 9.2.2 Positive surroundings effect on photocathode — **171**
- 9.3 Negative inhibitive effect — **174**
 - 9.3.1 Negative analyte effect on enzyme — **174**
 - 9.3.2 Negative inhibitive effect on enzyme reaction — **177**
 - 9.3.3 Activation of negative inhibitive effect — **177**
 - 9.3.4 Aptamer inhibitive effect — **178**
- 9.4 Self-powered display signal — **181**
 - 9.4.1 Self-powered electrical fluorescence biosensor — **181**
 - 9.4.2 Self-powered electrochemiluminescence biosensor — **181**
 - 9.4.3 Self-powered bipolar electrochromic biosensor — **184**
- 9.5 Conclusion and outlooks — **184**
References — **185**

Carlo Santoro, Dmitry Pankratov, Ioannis Ieropoulos, Francesca Soavi

- 10 Supercapacitors in bioelectrochemical systems — 189**
- 10.1 Bioelectrochemical systems — **189**
 - 10.1.1 Introduction — **189**
 - 10.1.2 Enzymatic fuel cells — **190**
 - 10.1.3 Microbial fuel cells and microbial desalination cells — **191**
 - 10.1.4 Supercapacitors — **191**
 - 10.1.5 Bioelectrochemical systems combined with external supercapacitors — **194**
- 10.2 Supercapacitive bioelectrochemical systems — **195**
 - 10.2.1 Introduction — **195**
 - 10.2.2 Supercapacitive enzymatic fuel cells — **195**
- 10.3 Supercapacitive microbial fuel cells — **201**
 - 10.3.1 Principle of a supercapacitive microbial fuel cell — **201**
 - 10.3.2 Supercapacitive microbial fuel cell operations — **202**
 - 10.3.3 Supercapacitive microbial desalination cells — **204**

- 10.4 Conclusions — 207
- References — 208

Sergey Shleev, Magnus Falk, Stefan Cirovic, Zoltan Blum

11 Wearable bioelectronic devices — 213

- 11.1 Introduction — 213
- 11.2 Wearable bioelectronic devices — 214
 - 11.2.1 Bioelectronics in tears — 214
 - 11.2.2 Bioelectronics in sweat — 219
 - 11.2.3 Bioelectronics in saliva — 226
 - 11.2.4 Bioelectronics in urine — 228
- 11.3 Summary and outlook — 230
- References — 231

Sergey Shleev, Olga Aleksejeva, Magnus Falk, Zoltan Blum

12 Biodegradable electric power devices — 237

- 12.1 Introduction — 237
- 12.2 Biodegradable electrochemical cells — 238
 - 12.2.1 Biodegradable fuel cells — 241
 - 12.2.2 Biodegradable batteries — 244
 - 12.2.3 Biodegradable supercapacitors — 248
- 12.3 Summary and outlook — 250
- References — 253

Timothé Philippon, Thomas Flinois, Estelle Lebègue, Nazua L. Costa, Frédéric Barrière, Joanna Rogińska, Mathieu Etienne

13 Current trends for water treatment with microbial electrodes — 259

- 13.1 Introduction — 259
- 13.2 Fundamentals of the microbe-electrode electron transfer — 259
- 13.3 Principle of MFCs for waste water treatment — 262
- 13.4 Cell designs for MFCs and related systems — 264
 - 13.4.1 Two-chambers and single-chamber MFC — 264
 - 13.4.2 Sediment MFC and microbial electrochemical snorkel — 265
- 13.5 Electrode materials, surface modifications, and biocomposites — 266
 - 13.5.1 Electrode materials — 266
 - 13.5.2 Surface modification — 267
 - 13.5.3 Biocomposite electrodes — 268
- 13.6 Microbial biocathode-catalyzed reaction of relevance to water treatment — 269
 - 13.6.1 Oxygen microbial biocathode — 269
 - 13.6.2 Nitrate microbial biocathode — 271

13.6.3	Metal recovery using microbial electrochemistry —	272
13.6.4	Hydrogen production through biocatalysis in a microbial electrolysis cell —	273
13.7	Conclusion —	276
