

CONTENTS

PREFACE	vii
CHAPTER 1. INTRODUCTION	1
1-1. Infrared Spectra	1
1-2. Raman Spectra	3
1-3. The Molecular Model	4
1-4. Classical Theory of Vibrational and Rotational Spectra	6
1-5. The Quantum Viewpoint	7
1-6. Applications	9
CHAPTER 2. THE VIBRATION OF MOLECULES	11
2-1. Separation of Rotation and Vibration	11
2-2. Small Vibrations in Classical Mechanics	14
2-3. Normal Modes of Vibration	17
2-4. Normal Coordinates	19
2-5. Modes of Motion with Zero Frequency	22
2-6. Other Types of Coordinates	25
2-7. An Illustration	27
2-8. Linear Molecules	31
CHAPTER 3. WAVE MECHANICS AND THE VIBRATION OF MOLECULES	34
3-1. The Wave Equation for the Vibration of the Harmonic Oscillator Model	34
3-2. Description of the Energy Levels of the Harmonic Oscillator	35
3-3. Nature of the Wave Functions	37
3-4. Selection Rules in Wave Mechanics	38
3-5. Infrared Selection Rules and Intensities for the Harmonic Oscillator Model	39
3-6. Classical Intensities of Radiation from an Induced Dipole	43
3-7. Quantum-mechanical Theory of Raman Intensities	48
CHAPTER 4. MORE ADVANCED METHODS OF STUDYING VIBRATIONS.	54
4-1. Internal Coordinates and Their Relation to Atomic Displacements	54
4-2. Construction and Properties of the G Matrix	61
4-3. The Secular Equation in Terms of Internal Coordinates	63
4-4. A Form of the Secular Equation Convenient for Machine Solution	65
4-5. Direct Expansion of the Secular Equation	68
4-6. An Example: The Nonlinear Triatomic Molecule	69
4-7. Determination of Normal Coordinates	71
4-8. Approximate Separation of High and Low Frequencies	74
CHAPTER 5. SYMMETRY CONSIDERATIONS	77
5-1. The Symmetry of Molecules	78
5-2. Groups of Symmetry Operations	80
5-3. The Symmetry Point Groups	82

5-4.	Symmetrically Equivalent Atoms and Subgroups	85
5-5.	Symmetry of the Potential and Kinetic Energies	87
5-6.	Representations	88
5-7.	Symmetry of Normal Coordinates	92
5-8.	Irreducible Representations	97
5-9.	Classes of Symmetry Operations	99
CHAPTER 6. APPLICATIONS OF GROUP THEORY TO THE ANALYSIS OF MOLECULAR VIBRATIONS		102
6-1.	Determination of the Characters χ_R	102
6-2.	Symmetry and Degeneracy of the Normal Modes	106
6-3.	Factoring of the Secular Equation	113
6-4.	Construction of Internal Symmetry Coordinates	117
6-5.	External Symmetry Coordinates	125
6-6.	The Potential and Kinetic Energies in Terms of Symmetry Coordinates	127
6-7.	Correlation Tables and the Treatment of Internal Coordinate Sets in which $n^{(\gamma)} > 1$	135
6-8.	Removal of Redundant Coordinates	140
CHAPTER 7. VIBRATIONAL SELECTION RULES AND INTENSITIES		146
7-1.	Symmetry of Wave Functions	147
7-2.	Symmetry of Combination Levels	148
7-3.	Symmetry Species of Overtone Levels	151
7-4.	Symmetry Species of a General Vibrational Level	155
7-5.	Symmetry of the Components of the Electric Moment	156
7-6.	The Transformation Properties of the Components of the Polarizability	157
7-7.	Determination of Selection Rules for Infrared Absorption	159
7-8.	Selection Rules for the Raman Effect	161
7-9.	Absolute Infrared Absorption Intensities of Fundamentals	162
CHAPTER 8. POTENTIAL FUNCTIONS		169
8-1.	The General Quadratic Potential Function	169
8-2.	The Approximation of Central Forces	173
8-3.	The Approximation of Valence Forces	174
8-4.	Modification of the Simple Force Functions	177
8-5.	The Isotope Effect	182
8-6.	Anharmonic Terms in the Potential Energy	193
8-7.	Quantum-mechanical Resonance	197
8-8.	Vibrations of Molecules with Several Equilibrium Positions	200
8-9.	Molecules with Internal Rotation	202
CHAPTER 9. METHODS OF SOLVING THE SECULAR DETERMINANT		208
9-1.	Characteristic Values and Characteristic Vectors	209
9-2.	Symmetrization of the Secular Determinant	211
9-3.	Solution by Direct Expansion of the Secular Determinant	214
9-4.	Indirect Expansion of the Secular Determinant	215
9-5.	Solution by Evaluation of the Determinant	218
9-6.	Rayleigh's Principle	218
9-7.	Solution of the Simultaneous Equations	222
9-8.	Matrix Iteration Methods	226
9-9.	Perturbation Methods	229
9-10.	Use of Electric Circuit Analogues	232

CHAPTER 10. A SAMPLE VIBRATIONAL ANALYSIS: THE BENZENE MOLECULE	240
10-1. Structure and Symmetry of the Benzene Molecule.	240
10-2. Symmetry Species of Normal Coordinates and Internal Coordinates	241
10-3. Selection Rules	244
10-4. Isotopically Substituted Benzene and the Product Rule	248
10-5. Assignment of Observed Frequencies.	251
10-6. Potential and Kinetic Energy in Internal Coordinates.	253
10-7. Symmetry Coordinates.	257
10-8. Factored Potential and Kinetic Energy Matrices	260
10-9. Expansion of Secular Equation	265
10-10. Calculation of Some Force Constants and Frequencies	265
CHAPTER 11. THE SEPARATION OF ROTATION AND VIBRATION	273
11-1. Classical Kinetic Energy	273
11-2. Hamiltonian Form of Kinetic Energy	277
11-3. A General Theorem Concerning Quantum-mechanical Hamiltonians	279
11-4. The Quantum-mechanical Hamiltonian for a Molecule	281
11-5. Practical Approximations	283
APPENDIXES	285
I. Coordinate Systems and Eulerian Angles	285
II. Justification of the Procedure used in Section 2-2 for Obtaining Normal Vibrations	287
III. Hermite Polynomials and Some Integrals Involving the Harmonic Oscillator Wave Functions.	289
IV. Averages of Direction Cosines Over All Orientations	292
V. A Summary of Matrix Notation	293
VI. A Tabulation of G Matrix Elements	303
VII. Connection Between G Matrix and Kinetic Energy	307
VIII. Matrix Treatment of Normal Coordinate Problem.	309
IX. The Separation of High and Low Frequencies	311
X. Some Properties of Group Representations; Character Tables and Correlation Tables	312
X-1. Derivation of Characters for the Cyclic Groups, C_n	312
X-2. Character Orthogonality Relations.	313
X-3. Characters of the Dihedral Groups, D_n	316
X-4. Isomorphic and Direct Product Groups	320
X-5. Species Notation	322
X-6. Symmetry Species of Combinations: Direct Products of Irreducible Representations	331
X-7. Overtones of Degenerate Fundamentals	332
X-8. Correlation Tables	333
XI. Orthogonality of Irreducible Representation Matrices.	341
XII. Proof of the Factoring of the Secular Determinant.	347
XIII. Reduction of an Irreducible Representation in a Subgroup	350
XIV. Symmetry Species for the Overtones of Degenerate Fundamentals	352
XV. Transformation of the Polarizability Components, α_{xx} , α_{xy} , etc.	359
XVI. Rotational Energies and Selection Rules.	361
INDEX.	371
