

# Contents

## 1 Biochemistry and the Organization of Cells 1

- 1.1 Basic Themes 1
- 1.2 Chemical Foundations of Biochemistry 3
- 1.3 The Beginnings of Biology: Origin of Life 5
  - The Earth and Its Age 5
    - Biochemical Connections:* Why Structural Formulas Are So Important 6
  - Biomolecules 7
  - Molecules to Cells 11
- 1.4 The Biggest Biological Distinction—Prokaryotes and Eukaryotes 14
- 1.5 Prokaryotic Cells 16
- 1.6 Eukaryotic Cells 16
- 1.7 Five Kingdoms, Three Domains 22
  - Biochemical Connections:* Extremophiles: The Toast of the Industry 25
- 1.8 Common Ground for All Cells 25
- 1.9 Biochemical Energetics 27
- 1.10 Energy and Change 29
- 1.11 Spontaneity in Biochemical Reactions 30
- 1.12 Life and Thermodynamics 31
  - Biochemical Connections:* Predicting Reactions 32
  - Summary 33
  - Review Exercises 34
  - Annotated Bibliography 36

## 2 Water: The Solvent for Biochemical Reactions 37

- 2.1 Water and Polarity 37
  - Solvent Properties of Water 38
- 2.2 Hydrogen Bonds 42
  - Other Biologically Important Hydrogen Bonds 45
    - Biochemical Connections:* How Basic Chemistry Affects Life: The Importance of the Hydrogen Bond 46
- 2.3 Acids, Bases, and pH 47
- 2.4 Titration Curves 51
- 2.5 Buffers 53
  - Biochemical Connections:* Buffer Selection 59
  - Biochemical Connections:* Some Physiological Consequences of Blood Buffering 60

*Biochemical Connections:* Lactic Acid—Not Always the Bad Guy 61

- Summary 61
- Review Exercises 62
- Annotated Bibliography 64

## 3 Amino Acids and Peptides 65

- 3.1 Amino Acids Exist in a Three-Dimensional World 65
- 3.2 Individual Amino Acids: Their Structures and Properties 66
  - Uncommon Amino Acids 70
  - Biochemical Connections:* Amino Acids to Calm Down and Pep Up 72
- 3.3 Amino Acids Can Act as Both Acids and Bases 73
- 3.4 The Peptide Bond 77
- 3.5 Small Peptides with Physiological Activity 79
  - Biochemical Connections:* Amino Acids Go Many Different Places 79
  - Biochemical Connections:* Aspartame, the Sweet Peptide 80
  - Biochemical Connections:* Phenylketonuria—Little Molecules Have Big Effects 82
  - Biochemical Connections:* Peptide Hormones—More Small Molecules with Big Effects 83
- Summary 84
- Review Exercises 84
- Annotated Bibliography 86

## 4 The Three-Dimensional Structure of Proteins 87

- 4.1 Protein Structure and Function 87
- 4.2 Primary Structure of Proteins 88
- 4.3 Secondary Structure of Proteins 89
  - Periodic Structures in Protein Backbones 89
    - Biochemical Connections:* Complete Proteins and Nutrition 90
  - Irregularities in Regular Structures 93
  - Supersecondary Structures and Domains 93
  - The Collagen Triple Helix 93
  - Two Types of Protein Conformations: Fibrous and Globular 97
- 4.4 Tertiary Structure of Proteins 98
  - Forces Involved in Tertiary Structures 99
  - Myoglobin: An Example of Protein Structure 102

- Denaturation and Refolding 104
- 4.5 **Quaternary Structure of Proteins** 106  
Hemoglobin 106  
Conformational Changes That Accompany Hemoglobin Function 108
- 4.6 **Protein Folding Dynamics** 112  
Hydrophobic Interactions: A Case Study in Thermodynamics 114  
The Importance of Correct Folding 116  
Protein-Folding Chaperones 116  
*Biochemical Connections: Prions and Disease* 118
- Summary** 119  
**Review Exercises** 120  
**Annotated Bibliography** 121
- 5 Protein Purification and Characterization Techniques** 123
- 5.1 **Extracting Pure Proteins from Cells** 123
- 5.2 **Column Chromatography** 124
- 5.3 **Electrophoresis** 129
- 5.4 **Determining the Primary Structure of a Protein** 132  
Cleavage of the Protein into Peptides 133  
Sequencing of Peptides: The Edman Method 134  
*Biochemical Connections: Pulling It All Together* 139
- Summary** 139  
**Review Exercises** 140  
**Annotated Bibliography** 142
- 6 The Behavior of Proteins: Enzymes** 143
- 6.1 **Enzymes Are Effective Biological Catalysts** 143
- 6.2 **Kinetics versus Thermodynamics** 143  
*Biochemical Connections: Enzymes as Markers for Disease* 145
- 6.3 **Enzyme Kinetic Equations** 146
- 6.4 **Enzyme–Substrate Binding** 148
- 6.5 **Examples of Enzyme-Catalyzed Reactions** 150
- 6.6 **The Michaelis–Menten Approach to Enzyme Kinetics** 152
- 6.7 **Enzyme Inhibition** 159  
*Biochemical Connections: Practical Information from Kinetic Data* 160  
*Biochemical Connections: Enzyme Inhibition in the Treatment of AIDS* 165

- Summary** 166  
**Review Exercises** 166  
**Annotated Bibliography** 169
- 7 The Behavior of Proteins: Enzymes, Mechanisms, and Control** 171
- 7.1 **The Behavior of Allosteric Enzymes** 171
- 7.2 **The Concerted and Sequential Models for Allosteric Enzymes** 175
- 7.3 **Control of Enzyme Activity by Phosphorylation** 179
- 7.4 **Zymogens** 182
- 7.5 **The Nature of the Active Site** 183
- 7.6 **Chemical Reactions Involved in Enzyme Mechanisms** 188  
*Biochemical Connections: Enzymes Catalyze Familiar Reactions of Organic Chemistry* 190
- 7.7 **The Active Site and Transition States** 192  
*Biochemical Connections: Families of Enzymes: Proteases* 199
- 7.8 **Coenzymes** 194  
*Biochemical Connections: Catalytic Antibodies against Cocaine*  
*Biochemical Connections: Catalysts for Green Chemistry* 198
- Summary** 198  
**Review Exercises** 199  
**Annotated Bibliography** 200
- 8 Lipids and Proteins Are Associated in Biological Membranes** 201
- 8.1 **The Definition of a Lipid** 201
- 8.2 **The Chemical Natures of the Lipid Types** 201  
*Biochemical Connections: Lipids Have Everything to Do with Multiple Sclerosis* 208
- 8.3 **Biological Membranes** 208  
*Biochemical Connections: Butter versus Margarine—Which Is Healthier?* 212
- 8.4 **The Kinds of Membrane Proteins** 213
- 8.5 **The Fluid-Mosaic Model of Membrane Structure** 215  
*Biochemical Connections: Membranes in Drug Delivery* 216
- 8.6 **The Functions of Membranes** 216  
*Biochemical Connections: Lipid Droplets Are Not Just Great Balls of Fat* 221

**8.7 Lipid-Soluble Vitamins and Their Functions 222**

Vitamin A 222

Vitamin D 222

*Biochemical Connections:* Vision Has Great Chemistry 225

Vitamin E 226

Vitamin K 226

**8.8 Prostaglandins and Leukotrienes 228***Biochemical Connections:* Why Should We Eat More Salmon? 230**Summary 231****Review Exercises 232****Annotated Bibliography 233****9 Nucleic Acids: How Structure Conveys Information 235****9.1 Levels of Structure in Nucleic Acids 235****9.2 The Covalent Structure of Polynucleotides 235***Biochemical Connections:* The DNA Family Tree 240**9.3 The Structure of DNA 241***Biochemical Connections:* What Makes a Triple Helix Useful in Drug Design? 247**9.4 Denaturation of DNA 249****9.5 The Principal Kinds of RNA and Their Structures 250***Biochemical Connections:* The Human Genome Project: Treasure or Pandora's Box? 251*Biochemical Connections:* Why Identical Twins Are Not Identical 257**Summary 258****Review Exercises 259****Annotated Bibliography 260****10 Biosynthesis of Nucleic Acids: Replication 261****10.1 The Flow of Genetic Information in the Cell 261****10.2 Replication of DNA 262**

Semiconservative Replication 262

**10.3 DNA Polymerase 265**

Semidiscontinuous DNA Replication 265

DNA Polymerase from *E. coli* 267**10.4 Proteins Required for DNA Replication 270**

Supercoiling and Replication 270

The Primase Reaction 271

Synthesis and Linking of New DNA Strands 272

**10.5 Proofreading and Repair 273***Biochemical Connections:* Why Does DNA Contain Thymine and Not Uracil? 276**10.6 Eukaryotic DNA Replication 278***Biochemical Connections:* The SOS Response in *E. coli* 279

Eukaryotic DNA Polymerases 281

*Biochemical Connections:* Telomerase and Cancer 282

The Eukaryotic Replication Fork 282

**Summary 285****Review Exercises 285****Annotated Bibliography 286****11 Transcription of the Genetic Code: The Biosynthesis of RNA 287****11.1 Overview of Transcription 287****11.2 Transcription in Prokaryotes 288**RNA Polymerase in *Escherichia coli* 288

Promoter Structure 289

Chain Initiation 290

Chain Elongation 291

Chain Termination 293

**11.3 Transcription Regulation in Prokaryotes 295**Alternative  $\sigma$  Factors 295

Enhancers 295

Operons 296

Transcription Attenuation 300

**11.4 Transcription in Eukaryotes 303**

Structure of RNA Polymerase II 304

Pol II Promoters 305

Initiation of Transcription 306

Elongation and Termination 307

**11.5 Transcription Regulation in Eukaryotes 309**

Enhancers and Silencers 309

*Biochemical Connections:* TFIIF—Making the Most Out of the Genome 310

Response Elements 311

RNA Interference 314

**11.6 Structural Motifs in DNA-Binding Proteins 314***Biochemical Connections:* CREB—The Most Important Protein You Have Never Heard Of? 315

	DNA-Binding Domains	315
	Helix–Turn–Helix Motifs	315
	Zinc Fingers	317
	Basic-Region Leucine Zipper Motif	317
	Transcription-Activation Domains	318
<b>11.7</b>	<b>Posttranscriptional RNA Modification</b>	<b>319</b>
	Transfer RNA and Ribosomal RNA	319
	Messenger RNA	319
	The Splicing Reaction: Lariats and Snurps	322
	Alternative RNA Splicing	323
	<i>Biochemical Connections:</i> Lupus: An Autoimmune Disease Involving RNA Processing	323
<b>11.8</b>	<b>Ribozymes</b>	<b>324</b>
	<i>Biochemical Connections:</i> Proofreading in Transcription? RNA Fills In Another Missing Piece	326
	<b>Summary</b>	<b>326</b>
	<b>Review Exercises</b>	<b>328</b>

	<b>Annotated Bibliography</b>	<b>403</b>

- 14 Viruses, Cancer, and Immunology** 405
- 14.1 **Viruses** 405  
Families of Viruses 405  
Virus Life Cycles 406
- 14.2 **Retroviruses** 410  
*Biochemical Connections:* Viruses Are Used for Gene Therapy 412
- 14.3 **The Immune System** 412  
Innate Immunity—The Front Lines of Defense 414  
Acquired Immunity: Cellular Aspects 416  
T-Cell Functions 416  
T-Cell Memory 419  
The Immune System: Molecular Aspects 421  
Distinguishing Self from Nonself 422  
*Biochemical Connections:* Viral RNAs Outwit the Immune System 424
- 14.4 **Cancer** 425  
Oncogenes 427  
Tumor Suppressors 429  
Viruses and Cancer 430  
Viruses Helping Cure Cancer 431  
*Biochemical Connections:* Attacking the Symptoms instead of the Disease? 434  
**Summary** 435  
**Review Exercises** 436  
**Annotated Bibliography** 437
- 15 The Importance of Energy Changes and Electron Transfer in Metabolism** 439
- 15.1 **Standard States for Free-Energy Changes** 439
- 15.2 **A Modified Standard State for Biochemical Applications** 440  
*Biochemical Connections:* Living Things Need Energy—How Do They Use It? 441
- 15.3 **The Nature of Metabolism** 442  
*Biochemical Connections:* Living Things Are Unique Thermodynamic Systems 443
- 15.4 **The Role of Oxidation and Reduction in Metabolism** 444
- 15.5 **Coenzymes in Biologically Important Oxidation–Reduction Reactions** 445
- 15.6 **Coupling of Production and Use of Energy** 448
- 15.7 **Coenzyme A in Activation of Metabolic Pathways** 453  
**Summary** 457  
**Review Exercises** 457  
**Annotated Bibliography** 460
- 16 Carbohydrates** 461
- 16.1 **Sugars: Their Structures and Stereochemistry** 461
- 16.2 **Reactions of Monosaccharides** 469  
*Biochemical Connections:* Vitamin C Is Related to Sugars 471
- 16.3 **Some Important Oligosaccharides** 475  
*Biochemical Connections:* Fruits, Flowers, Striking Colors, and Medicinal Uses Too 476  
*Biochemical Connections:* Lactose Intolerance: Why Do So Many People Not Want to Drink Milk? 478
- 16.4 **Structures and Functions of Polysaccharides** 478  
*Biochemical Connections:* Why Is Dietary Fiber So Good for You? 483
- 16.5 **Glycoproteins** 486  
*Biochemical Connections:* Low-Carbohydrate Diets 488  
*Biochemical Connections:* Glycoproteins and Blood Transfusions 488  
**Summary** 488  
**Review Exercises** 489  
**Annotated Bibliography** 491
- 17 Glycolysis** 493
- 17.1 **The Overall Pathway of Glycolysis** 493  
*Biochemical Connections:* Biofuels from Fermentation 496
- 17.2 **Conversion of Six-Carbon Glucose to Three-Carbon Glyceraldehyde-3-Phosphate** 497
- 17.3 **Glyceraldehyde-3-Phosphate Is Converted to Pyruvate** 502
- 17.4 **Anaerobic Metabolism of Pyruvate** 510  
*Biochemical Connections:* What Is the Connection between Anaerobic Metabolism and Dental Plaque? 513  
*Biochemical Connections:* Fetal Alcohol Syndrome 514
- 17.5 **Energy Production in Glycolysis** 515  
**Summary** 516  
**Review Exercises** 517  
**Annotated Bibliography** 518

## 18 Storage Mechanisms and Control in Carbohydrate Metabolism 519

### 18.1 How Glycogen Is Produced and Degraded 519

*Biochemical Connections:* Why Do Athletes Go In for Glycogen Loading? 526

### 18.2 Gluconeogenesis Produces Glucose from Pyruvate 527

### 18.3 Control of Carbohydrate Metabolism 531

### 18.4 Glucose Is Sometimes Diverted through the Pentose Phosphate Pathway 536

*Biochemical Connections:* The Pentose Phosphate Pathway and Hemolytic Anemia 540

Summary 541

Review Exercises 542

Annotated Bibliography 543

## 19 The Citric Acid Cycle 545

### 19.1 The Central Role of the Citric Acid Cycle in Metabolism 545

### 19.2 The Overall Pathway of the Citric Acid Cycle 546

### 19.3 How Pyruvate Is Converted to Acetyl-CoA 549

### 19.4 The Individual Reactions of the Citric Acid Cycle 552

*Biochemical Connections:* Plant Poisons and the Citric Acid Cycle 555

### 19.5 Energetics and Control of the Citric Acid Cycle 560

### 19.6 The Glyoxylate Cycle: A Related Pathway 562

### 19.7 The Citric Acid Cycle in Catabolism 564

### 19.8 The Citric Acid Cycle in Anabolism 565

*Biochemical Connections:* Why Can't Animals Use All the Same Energy Sources as Plants and Bacteria? 569

### 19.9 The Link to Oxygen 571

Summary 571

*Biochemical Connections:* Why Is It So Hard to Lose Weight? 572

Review Exercises 574

Annotated Bibliography 575

## 20 Electron Transport and Oxidative Phosphorylation 577

### 20.1 The Role of Electron Transport in Metabolism 577

### 20.2 Reduction Potentials in the Electron Transport Chain 578

### 20.3 Organization of Electron Transport Complexes 581

### 20.4 The Connection between Electron Transport and Phosphorylation 588

### 20.5 The Mechanism of Coupling in Oxidative Phosphorylation 591

### 20.6 Respiratory Inhibitors Can Be Used to Study Electron Transport 594

### 20.7 Shuttle Mechanisms 597

*Biochemical Connections:* What Does Brown Adipose Tissue Have to Do with Obesity? 597

### 20.8 The ATP Yield from Complete Oxidation of Glucose 599

*Biochemical Connections:* Sports and Metabolism 600

Summary 601

*Biochemical Connections:* The Darker Side of Sports 602

Review Exercises 604

Annotated Bibliography 606

## 21 Lipid Metabolism 607

### 21.1 Lipids Are Involved in the Generation and Storage of Energy 607

### 21.2 Catabolism of Lipids 607

### 21.3 The Energy Yield from the Oxidation of Fatty Acids 612

### 21.4 Catabolism of Unsaturated Fatty Acids and Odd-Carbon Fatty Acids 614

### 21.5 Ketone Bodies 616

### 21.6 Fatty-Acid Biosynthesis 618

*Biochemical Connections:* Ketone Bodies and Effective Weight Loss 619

### 21.7 Synthesis of Acylglycerols and Compound Lipids 626

*Biochemical Connections:* A Gene for Obesity 626

Triacylglycerols 627

*Biochemical Connections:* Acetyl-CoA Carboxylase—A New Target in the Fight against Obesity? 628

### 21.8 Cholesterol Biosynthesis 631

*Biochemical Connections:* Atherosclerosis 640

Summary 641

Review Exercises 642

Annotated Bibliography 644

## 22 Photosynthesis 645

### 22.1 Chloroplasts Are the Site of Photosynthesis 645

*Biochemical Connections:* The Relationship between Wavelength and Energy of Light 649

### 22.2 Photosystems I and II and the Light Reactions of Photosynthesis 649

Cyclic Electron Transport in Photosystem I 653

### 22.3 Photosynthesis and ATP Production 656

*Biochemical Connections:* Killing Weeds by Inhibiting Photosynthesis 658

### 22.4 Evolutionary Implications of Photosynthesis with and without Oxygen 658

### 22.5 Dark Reactions of Photosynthesis Fix CO<sub>2</sub> 660

### 22.6 CO<sub>2</sub> Fixation in Tropical Plants 664

*Biochemical Connections:* Chloroplast Genes 664

Summary 668

Review Exercises 669

Annotated Bibliography 670

## 23 The Metabolism of Nitrogen 671

### 23.1 Nitrogen Metabolism: An Overview 671

### 23.2 Nitrogen Fixation 672

*Biochemical Connections:* Why Is the Nitrogen Content of Fertilizers So Important? 673

### 23.3 Feedback Inhibition in Nitrogen Metabolism 674

### 23.4 Amino Acid Biosynthesis 676

### 23.5 Essential Amino Acids 685

### 23.6 Amino Acid Catabolism 685

Excretion of Excess Nitrogen 686

*Biochemical Connections:* Water and the Disposal of Nitrogen Wastes 687

*Biochemical Connections:* Chemotherapy and Antibiotics—Taking Advantage of the Need for Folic Acid 691

### 23.7 Purine Biosynthesis 691

Anabolism of Inosine Monophosphate 691

### 23.8 Purine Catabolism 694

*Biochemical Connections:* Lesch–Nyhan Syndrome 696

### 23.9 Pyrimidine Biosynthesis and Catabolism 697

The Anabolism of Pyrimidine Nucleotides 697

Pyrimidine Catabolism 700

### 23.10 Conversion of Ribonucleotides to Deoxyribonucleotides 700

### 23.11 Conversion of dUTP to dTTP 701

Summary 703

Review Exercises 704

Annotated Bibliography 705

## 24 Integration of Metabolism: Cellular Signaling 707

### 24.1 Connections between Metabolic Pathways 707

### 24.2 Biochemistry and Nutrition 708

*Biochemical Connections:* Alcohol Consumption and Addiction 709

*Biochemical Connections:* Iron: An Example of a Mineral Requirement 712

The Food Pyramid 712

### 24.3 Hormones and Second Messengers 716

Hormones 716

Second Messengers 720

Cyclic AMP and G Proteins 720

Calcium Ion as a Second Messenger 722

Receptor Tyrosine Kinases 724

### 24.4 Hormones and the Control of Metabolism 725

### 24.5 Insulin and Its Effects 728

Insulin Receptors 729

Insulin's Effect on Glucose Uptake 729

*Biochemical Connections:* Insulin and Low-Carbohydrate Diets 730

Insulin Affects Many Enzymes 730

Diabetes 731

Insulin and Sports 731

*Biochemical Connections:* A Workout a Day Keeps Diabetes Away? 732

*Biochemical Connections:* The Search for Longevity 733

Summary 734

Review Exercises 734

Annotated Bibliography 736

## Magazine: Hot Topics in Biochemistry

Doping in Sports: Good Science Gone Bad 737

Bird Flu: The Next Pandemic? 740

Single Nucleotide Polymorphisms: Changing One Base Can Make a Big Difference 742

HPV Vaccines: Waging the War on Cervical Cancer 745
