Preface	vii
List of notation	ix
<b>Part I. Higher-order singular problems</b>	<b>1</b>
1. Existence principles for singular problems	5
1.1. Formulation of the problem	5
1.2. Singularities in time variable	6
1.3. Singularities in space variables	13
2. Focal problems	19
2.1. Time singularities	19
2.2. Space singularities	22
3. $(n, p)$ problem	31
4. Conjugate problem	47
5. Sturm-Liouville problem	57
6. Lidstone problem	73
<b>Part II. Second-order singular problems with <math>\phi</math>-Laplacian</b>	<b>83</b>
7. Dirichlet problem	87
7.1. Regular Dirichlet problem	89
7.2. Dirichlet problem with time singularities	103
7.3. Dirichlet problem with space singularities	113
7.4. Dirichlet problem with mixed singularities	121
8. Periodic problem	133
8.1. Method of lower and upper functions	135
8.2. Attractive singular forces	154
8.3. Strong repulsive singular forces	160
8.4. Weak repulsive singular forces	170
8.5. Periodic problem with time singularities	179
9. Mixed problem	187
9.1. Problem with singularities in all variables	187
9.2. Problem arising in the shallow membrane caps theory	193
10. Nonlocal problems	205

11. Problems with a parameter 217

Appendices 233

    A. Uniform integrability/equicontinuity 233

    B. Convergence theorems 242

    C. Some general existence theorems 245

    D. Spectrum of the quasilinear Dirichlet problem 250

Bibliography 253
