5.5	5.5.1	Introduction	Geometric models	185
5.5.2	5.5.2.1	Analytical methods	Projection integrals-Geometrical approach	186
5.5.2.2	5.5.2.2.1	Relating roses of random fields	The Gumbel moments and extremes	186
5.5.2.3	5.5.2.3.1	Extremes of Gaussian random fields	5.5.2.3.1.1 Geometric approach	188
5.5.2.3	5.5.2.3.2	Extremes of Gaussian random fields	5.5.2.3.2.1 M ⁺ -processes and extremes	140
5.5.3	5.5.3.1	Convex geometry approach	Poisson processes	143
5.5.3.2	5.5.3.2.1	Steiner compact in \mathbb{R}^d	Fast processes	145
5.5.3.2	5.5.3.2.2	Poisson line process	Inhomogeneous systems	180
5.5.3.3	5.5.3.3.1	Curved test systems	Direct processes	152
5.5.3.4	5.5.3.4.1	Steiner compact in \mathbb{R}^d	Intrinsic processes	155
5.5.3.5	5.5.3.5.1	Anisotropic grid systems	Applications	159
Preface			Preface	xviii
Acknowledgments			Contributions in disciplines	xix
1. PRELIMINARIES			3.3.2 Examples	1
1.1	1.1.1	Geometry and measure in the Euclidean space	Best	1
1.1.1	1.1.1.1	Measures	Asymptotic formulae	2
1.1.2	1.1.2.1	Convex bodies	Convergence of measures	3
1.1.3	1.1.3.1	Hausdorff measures and rectifiable sets	Radonization	5
1.1.4	1.1.4.1	Integral geometry	Approximate sampling	8
1.2	1.2.1	Probability and statistics	1.1.1 IUR sampling	12
1.2.1	1.2.1.1	Markov chains	1.1.2 Asymptotic formulae	14
1.2.2	1.2.2.1	Markov chain Monte Carlo	1.1.3 Radonization	16
1.2.3	1.2.3.1	Point estimation	1.1.4 Approximate sampling	17
2. RANDOM MEASURES AND POINT PROCESSES			3.3.3 Exercises	21
2.1	2.1.1	Basic definitions	Exercises	22
2.2	2.2.1	Palm distributions	Exercises	25
2.3	2.3.1	Poisson process	Exercises	28
2.4	2.4.1	Finite point processes	Exercises	30
2.5	2.5.1	Stationary random measures on \mathbb{R}^d	Exercises	32
2.6	2.6.1	Application of point processes in epidemiology	Exercises	35
2.7	2.7.1	Weighted random measures, marked point processes	Exercises	38
2.8	2.8.1	Stationary processes of particles	Exercises	40
2.9	2.9.1	Flat processes	Exercises	43

3. RANDOM FIBRE AND SURFACE SYSTEMS	45
3.1 Geometric models	47
3.1.1 Projection integral-geometric measures	48
3.1.2 The Campbell measure and first order properties	50
3.1.3 Second-order properties	52
3.1.4 \mathcal{H}^k -processes and Palm distributions	55
3.1.5 Poisson process	58
3.1.6 Flat processes	60
3.2 Intensity estimators	61
3.2.1 Direct probes	63
3.2.2 Indirect probes	67
3.2.3 Application - fibre systems in soil	72
3.3 Projection measure estimation	75
3.3.1 Convergence in quadratic mean	76
3.3.2 Examples	80
3.4 Best unbiased estimators of intensity	81
3.4.1 Poisson line processes	82
3.4.2 Poisson particle processes	85
3.4.3 Comparison of estimators of length intensity of Poisson segment processes	86
3.4.4 Asymptotic normality	88
4. VERTICAL SAMPLING SCHEMES	93
4.1 Randomized sampling	95
4.1.1 IUR sampling	95
4.1.2 Application - effect of steel radiation	97
4.1.3 VUR sampling	99
4.1.4 Variances of estimation of length	102
4.1.5 Variances of estimation of surface area	104
4.1.6 Cycloidal probes	111
4.2 Design-based approach	114
4.2.1 VUR sampling design	114
4.2.2 Further properties of intensity estimators	117
4.2.3 Estimation of average particle size	120
4.2.4 Estimation of integral mixed surface curvature	124
4.2.5 Gradient structures	130
4.2.6 Microstructure of enamel coatings	132

5. FIBRE AND SURFACE ANISOTROPY	135
5.1 Introduction	135
5.2 Analytical approach	136
5.2.1 Intersection with x_1 -axis in \mathbb{R}^2	136
5.2.2 Relating roses of directions and intersections	138
5.2.3 Estimation of the rose of directions	140
5.3 Convex geometry approach	143
5.3.1 Steiner compact in \mathbb{R}^2	145
5.3.2 Poisson line process.	150
5.3.3 Curved test systems	152
5.3.4 Steiner compact in \mathbb{R}^d , $d \geq 3$	155
5.3.5 Anisotropy estimation using MCMC	159
5.4 Orientation-dependent direction distribution	161
6. PARTICLE SYSTEMS	169
6.1 Stereological unfolding	169
6.1.1 Planar sections of a single particle	170
6.1.2 Planar sections of stationary particle processes	171
6.1.3 Unfolding of particle parameters	173
6.2 Bivariate unfolding	176
6.2.1 Platelike particles	176
6.2.2 Numerical solution	179
6.2.3 Analysis of microcracks in materials	181
6.3 Trivariate unfolding	182
6.3.1 Oblate spheroids	184
6.3.2 Prolate spheroids	188
6.3.3 Trivariate unfolding, EM algorithm	191
6.3.4 Damage initiation in aluminium alloys	193
6.4 Stereology of extremes	196
6.4.1 Sample extremes – domain of attraction	197
6.4.2 Normalizing constants	198
6.4.3 Extremal size in the corpuscle problem	199
6.4.4 Shape factor of spheroidal particles	200
6.4.5 Prediction of extremal shape factor	203
6.4.6 Farlie-Gumbel-Morgenstern distribution	205
6.4.7 Simulation study of shape factor extremes	207
