<i>Preface to the first edition</i>	V
<i>Preface to the second edition</i>	VI

Section I – PHYSICAL OPTICS

<i>Chapter 1. Fresnel and Fraunhofer diffraction</i>	3
1.1. Introduction	3
1.2. Wave equations and waves	5
1.2.1. Wave functions	5
1.2.2. Electromagnetic waves	6
1.2.3. Particle waves	7
1.3. Superposition and coherence	8
1.3.1. Superposition	8
1.3.2. Independent point sources	9
1.4. Huygen's principle	11
1.4.1. Kirchhoff's formulation	11
1.4.2. Application of the Kirchhoff formula	12
1.5. Scattering theory approach	13
1.5.1. Integral form of wave equation	13
1.5.2. Born series	14
1.6. Reciprocity	16
1.7. Fresnel diffraction	16
1.7.1. Small angle approximation	16
1.7.2. Fresnel integrals	17
1.7.3. Periodic objects – “Fourier images”	19
1.8. Fraunhofer diffraction	21
Problems	24
 <i>Chapter 2. Fourier transforms and convolutions</i>	 25
2.1. Preliminaries	25
2.1.1. Delta-functions and discontinuities	25
2.1.2. Convolutions	26
2.1.3. Examples of convolutions	27
2.2. Fourier transforms: general	30
2.2.1. Definitions	30

2.2.2. Properties of Fourier transforms	31
2.2.3. Multiplication and convolution	33
2.2.4. Space and time	34
2.3. Fourier transforms and diffraction: examples	35
2.3.1. Point source or point aperture	35
2.3.2. A plane wave: the inverse of 2.3.1.	36
2.3.3. Translation of an object	36
2.3.4. Slit function	36
2.3.5. Slit function-alternative	37
2.3.6. Straight edge	37
2.3.7. Rectangular aperture	39
2.3.8. Circular aperture	39
2.3.9. Two very narrow slits	40
2.3.10. Two slits of appreciable width	41
2.3.11. Finite wave train	41
2.3.12. Periodic array of narrow slits	42
2.3.13. Arbitrary periodic function	43
2.3.14. Diffraction grating: thin slits	44
2.3.15. Diffraction grating: general	45
2.3.16. Gaussian function	46
2.3.17. Row of circular holes	47
2.3.18. Complementary objects – Babinet's principle	48
2.3.19. Total intensities: Parseval's theorem	49
Problems	49
 <i>Chapter 3. Imaging and diffraction</i>	 51
3.1. Wave theory of imaging	51
3.1.1. Coherent wave optics	51
3.1.2. Incoherent wave imaging	54
3.2. Abbe theory	55
3.3. Small angle approximation	56
3.4. Phase contrast	59
3.4.1. Phase and amplitude objects	59
3.4.2. Out-of-focus contrast	60
3.4.3. Aperture limitation	62
3.4.4. Zernike phase contrast	62
3.5. Multi-component systems	63
3.6. Partial coherence	66
Problems	69
 Section II – KINEMATICAL DIFFRACTION	
 <i>Chapter 4. Radiations and their scattering by matter</i>	 73
4.1. X-rays	73
4.1.1. X-ray sources	73
4.1.2. Scattering by electrons	73

4.1.3. Scattering by atoms	75
4.1.4. Dispersion corrections	76
4.2. Electrons	77
4.2.1. Sources of electrons	77
4.2.2. Atom scattering amplitudes	78
4.2.3. Phase object approximation	79
4.2.4. Failure of first Born approximation	81
4.2.5. "Absorption" effects	82
4.3. Neutrons	84
4.3.1. Atomic scattering factors	84
4.3.2. Nuclear spin scattering	85
4.3.3. Isotopic disorder	86
4.3.4. Thermal and magnetic scattering	87
Problems	87
<i>Chapter 5. Scattering from assemblies of atoms</i>	89
5.1. The kinematical approximation	89
5.2. Real and reciprocal space	91
5.2.1. Reciprocal space distribution	91
5.2.2. The reciprocal lattice	92
5.2.3. Friedel's law and the phase problem	93
5.3. The generalized Patterson function	94
5.4. Examples of correlation functions	97
5.4.1. Finite volume limitations	97
5.4.2. Finite crystals	98
5.5. Correlation in space and time	100
5.5.1. Four-dimensional Patterson	100
5.5.2. Special cases	101
5.5.3. Ideal monatomic gas or liquid	102
5.5.4. Real monatomic gases and liquids	105
5.5.5. The hydrogen atom	107
5.6. Diffraction geometry and intensities	108
5.7. Practical considerations	110
5.7.1. Finite sources and detectors	110
5.7.2. Wavelength spread	112
5.7.3. Integrated intensities	113
5.8. Sections and projections	114
Problems	116
<i>Chapter 6. Diffraction from crystals</i>	117
6.1. Ideal crystals	117
6.2. Diffraction geometry	120
6.2.1. Laue and Bragg diffraction conditions	120
6.2.2. Shape transforms	121
6.2.3. Special cases for electron diffraction	122

6.3. Crystal structure analysis	126
6.3.1. The phase problem	126
6.3.2. Supplementary information	127
6.4. Structure analysis methods	128
6.4.1. Trial and error	128
6.4.2. Patterson function	129
6.4.3. Optical analogues	130
6.4.4. Other methods	131
6.5. Neutron diffraction structure analysis	132
6.5.1. Nuclear scattering	132
6.5.2. Magnetic scattering	133
6.6. Electron diffraction structure analysis	134
Problems	136

Chapter 7. Diffraction from imperfect crystals 139

7.1. Formulation of the diffraction problem	139
7.1.1. Types of defects	139
7.1.2. General diffraction formulation	140
7.2. Patterson function approach	141
7.2.1. Patterson with an average periodic structure	141
7.2.2. Patterson function with no average structure	143
7.3. Deviations from an average lattice	144
7.3.1. Random vacancies: no relaxation	144
7.3.2. Clustered vacancies	146
7.3.3. Lattice relaxation	148
7.3.4. Thermal vibrations – Einstein model	150
7.4. Imperfect crystals with no average lattice	152
7.4.1. Uneven separation of lattice planes	152
7.4.2. Disordered orientations	154
Problems	157

Section III – DYNAMICAL SCATTERING

Chapter 8. Diffraction by perfect crystals 161

8.1. Multiple coherent scattering	161
8.2. Theoretical approaches	162
8.3. Bethe theory	164
8.3.1. The dispersion equations	164
8.3.2. Solutions of the equations	166
8.3.3. Boundary conditions	167
8.4. Two-beam approximation	169
8.4.1. Bloch waves and dispersion surfaces	169
8.4.2. Conduction electrons – energy representation	171
8.4.3. X-ray diffraction; polarization	172

8.5. The Laue (transmission) case	172
8.5.1. Electron diffraction for a thin crystal	172
8.5.2. Small angle approximation	175
8.5.3. Laue case with absorption	176
8.6. Bethe potentials	176
8.7. The Bragg case	178
<i>Chapter 9. Dynamical diffraction effects</i>	183
9.1. Thickness fringes and rocking curves – electron diffraction	183
9.1.1. Intensity formulas	183
9.1.2. Real space picture	183
9.1.3. Rocking curves	185
9.1.4. Extinction contours	185
9.1.5. Convergent beam diffraction	187
9.1.6. Diffraction and imaging of crystal wedges	189
9.1.7. Absorption effects for wedges	191
9.2. Dynamical effects of X-ray and neutron diffraction	193
9.2.1. Techniques for X-ray diffraction	193
9.2.2. Energy flow	196
9.2.3. Dispersion surface picture	197
9.2.4. Neutron diffraction	198
9.3. Borrmann effect	199
Problems	201
<i>Chapter 10. Extension to many beams</i>	203
10.1. Dynamical n -beam diffraction	203
10.2. Extension of Bethe theory – transmission	205
10.2.1. Matrix formulation	205
10.2.2. Small angle approximation	207
10.2.3. Bloch waves and boundary conditions	208
10.2.4. The scattering matrix	210
10.2.5. Derivation of the two-beam approximation	212
10.3. The Darwin-type approach	214
10.4. Special cases – beam reduction	216
10.5. Computing methods	218
10.6. Column approximation	222
Problems	223
<i>Chapter 11. The “physical optics” approach</i>	225
11.1. Propagation of electrons in crystals	225
11.1.1. Transmission through thin slices	225
11.1.2. Three-dimensional objects	227
11.1.3. Diffraction by a crystal	228
11.1.4. General expression in terms of excitation errors	230

11.2. Multiple-scattering series	231
11.2.1. Zero-order scattering	231
11.2.2. Single scattering – kinematical approximation	232
11.2.3. Multiple scattering	233
11.3. General double-summation solution	234
11.3.1. General series solution	230
11.3.2. Phase grating approximation	236
11.4. Computing methods	238
11.4.1. “Slice method” calculations	238
11.4.2. Steps in a computation	239
11.4.3. Possible errors	241
11.4.4. Consistency tests	241
11.4.5. One-dimensional calculations	242
11.5. Intensities from non-periodic objects	243
Problem	245

Section IV – APPLICATIONS TO SELECTED TOPICS

<i>Chapter 12. Diffuse scattering and absorption effects</i>	249
12.1. Thermal diffuse scattering	249
12.1.1. Phonons and vibrational waves	249
12.1.2. Scattering for a longitudinal wave	250
12.1.3. Diffuse scattering component	251
12.1.4. Dispersion curves	253
12.1.5. Three-dimensional generalizations	254
12.2. Static atom displacements	254
12.2.1. Relaxation around point defects	254
12.2.2. Diffraction intensities for displaced atoms	255
12.2.3. The Bragg peaks	257
12.2.4. The diffuse scattering	258
12.3. Electron excitations	261
12.3.1. Inelastic X-ray scattering	261
12.3.2. Electron excitation by electrons – plasmons	262
12.3.3. Single-electron excitations	264
12.4. Dynamical effects in diffuse scattering	266
12.4.1. Scattering and re-scattering	266
12.4.2. Coherent and incoherent scattering	268
12.4.3. Analysis of diffuse scattering	270
12.5. Absorption effects	271
12.5.1. The nature of absorption parameters	271
12.5.2. Absorption of X-rays and neutrons	272
12.5.3. “Absorption” for electrons	273
12.5.4. Absorption due to the thermal vibrations	274
12.5.5. Absorption from electron excitations	276
12.5.6. Values of absorption coefficients	276

<i>Chapter 13. Electron microscope imaging</i>	279
13.1. Optics of the electron microscope	279
13.1.1. Conventional transmission electron microscopy	279
13.1.2. Scanning transmission electron microscopy	281
13.2. Image formation	283
13.3. Contrast for thin specimens	285
13.3.1. Phase object approximation	285
13.3.2. The absorption function	286
13.3.3. Weak-phase object approximation	287
13.3.4. Dark field images	291
13.4. The imaging of crystal structures	292
13.4.1. Imaging of thin crystals; structure images	292
13.4.2. Calculation of images of crystals	298
13.4.3. Lattice fringe imaging	299
13.4.4. Crystal imaging without lattice resolution	303
13.5. High voltage microscopy	304
Problems	306
<i>Chapter 14. K-line patterns and channelling</i>	309
14.1. Kossel lines	309
14.1.1. Geometry of Kossel lines	309
14.1.2. Dynamical theory of Kossel intensities	310
14.1.3. Kossel lines with limited resolution	312
14.2. Kikuchi lines	315
14.3. External sources of divergent radiation	319
14.4. Information from K-line patterns	321
14.5. Channelling	323
14.6. Secondary radiations	326
<i>Chapter 15. Application of dynamical effects in single crystals</i>	329
15.1. Dependence of dynamical effects on crystal parameters	329
15.2. X-ray interferometry	330
15.3. n -beam and 2-beam dynamical diffraction	331
15.4. The determination of structure amplitudes from thickness fringes	335
15.5. Structure amplitudes from rocking curves	337
15.6. Relativistic effects	341
15.7. Absorptions and temperature effects	342
15.8. The determination of crystal symmetries	343
<i>Chapter 16. Mosaic crystals and polycrystalline materials</i>	349
16.1. General	349
16.2. Mosaic crystals	350
16.2.1. The mosaic crystal model	350

16.2.2. Kinematical integrated intensities	350
16.2.3. Extinction effects	352
16.2.4. Dynamical electron diffraction intensities	353
16.3. Polycrystalline material	354
16.3.1. Idealized models	354
16.3.2. Kinematical diffraction intensities	356
16.3.3. Line profile analysis	357
16.3.4. Dynamical diffraction intensities	358
16.3.5. n -beam diffraction effects	361
 <i>Chapter 17. Ordering of atoms in crystals</i>	 363
17.1. The nature and description of disordered states	363
17.2. Order parameters	365
17.2.1. Short range order	365
17.2.2. Long-range order	367
17.3. Patterson function	368
17.4. Size effects	369
17.5. Kinematical diffraction	371
17.5.1. Diffraction with ordering only	371
17.5.2. Diffraction with ordering and size effects	374
17.6. Relationship with ordering energies	379
17.7. Dynamical scattering from disordered crystals	380
17.7.1. Dynamical effects in diffuse scattering	380
17.7.2. Calculations of diffuse scattering	381
17.7.3. Strong scattering and multi-atom correlations	382
17.8. Out-of-phase domains	384
17.8.1. Ordered out-of-phase superlattices	384
17.8.2. Out-of-phase domains in disordered alloys	386
17.8.3. Modulated structures	387
Problems	388
 <i>Chapter 18. Extended defects</i>	 389
18.1. Introduction	389
18.2. Stacking faults – statistical, kinematical theory	390
18.2.1. Patterson method for a simple case	390
18.2.2. A general treatment	392
18.2.3. Faults in close-packed structures	398
18.3. Dynamical diffraction by stacking faults	400
18.4. Dislocations	402
18.4.1. Diffraction effects	402
18.4.2. The imaging of dislocations	404
18.4.3. Averaging over angles of incidence	405
18.4.4. n -beam diffraction effects	405
 <i>References</i>	 411
<i>Index</i>	425
