

# CONTENTS

INTRODUCTION .....	7
1. SURVEY OF LITERATURE .....	10
1.1. Artificial hybridization as a starting point of both earlier and present trends in pine breeding .....	10
1.2. Artificial hybridization as an example of experimental approach to pine taxonomy .....	19
1.3. Possibilities of isoenzyme utilization in genetic investigation of forest woody plants .....	26
1.4. Genetic control of isoenzyme systems in the Scotch pine ( <i>Pinus sylvestris</i> L.) .....	29
2. MATERIAL AND METHODS .....	35
2.1. Artificial hybridization of pines .....	35
2.2. Karyological analyses of pines .....	38
2.3. Analysis of immunological properties of pollen and ovule proteins .....	38
2.4. Analysis of isoenzyme composition of Scotch pine seeds .....	40
3. RESULTS .....	45
3.1. Morphological organization of reproductive organs of pines and its changes in the course of development .....	45
3.2. Artificial hybridization of pines .....	49
3.3. Relative autofertility and lethal equivalents of individual pine species .....	67
3.4. Karyological structure of analysed pine species ..	68
3.5. Serological properties of pollen grains and ovules in selected pine species .....	74
3.6. Isoenzyme polymorphism of selected populations of the Scotch pine ( <i>P. sylvestris</i> L.) .....	82

4. DISCUSSION .....	93
5. SUMMARY .....	101
References .....	104
Súhrn .....	114
Резюме .....	117
