I Introduction

1.1	Why species?	1
1.2	The evolutionary dynamics of species	2
1.3	Structure of the book	5
2	What are species?	7
2.1	Introduction	7
2.2	Definitions	7
2.3	The shape of biological diversity: the conventional species model	9
2.4	Multiple properties of species	12
2.5	Separating out the effects of alternative mechanisms	15
	2.5.1 No diversifying processes	15
	2.5.2 Just reproductive isolation	16
	2.5.3 Just geographical structure	19
	2.5.4 Reproductive isolation and geographic structure	19
	2.5.5 Just ecological heterogeneity	20
	2.5.6 Ecological divergence and reproductive isolation	20
	2.5.7 Ecological divergence and geographical structure	20
	2.5.8 Reproductive isolation, ecological divergence, and	
	geographical structure	21
2.6	Which mechanisms are most important?	21
2.7	Alternative models for diversity	25
	2.7.1 No evolutionary independence	25
	2.7.2 Gradual decline in evolutionary dependence	26
	2.7.3 Discrete and single-level species	26
	2.7.4 Discrete but with multiple levels	26
2.8	Other representations of diversity	27
2.9	Conclusions	29
3	The evidence for species—phenotypic and	
	genetic clustering	30
3.1	Introduction	30
3.2	Phenotypic clusters	31

Decory of diversification in esexuals and indicate base aphilosi leither 5.5.5

3.3	Genetic clusters: single locus	34
	3.3.1 Theory	34
	3.3.2 Evidence	41
	3.3.3 Partial isolation and sampling	46
	3.3.4 Independent limitation causes clustering, not reproductive	
	isolation	47
	3.3.5 Single locus conclusions	49
3.4	Conclusions	50
App	pendix 3.1 A user's guide to coalescence	50
4	Why are there species? Arenas of recombination	
	and selection	52
4.1	Introduction	52
4.2	Arenas of recombination from multiple loci	52
	4.2.1 Theory	53
	4.2.2 Evidence	58
	4.2.3 Multiple loci conclusion	66
4.3	Units of divergent selection	66
	4.3.1 Genetic data	67
	4.3.2 Phenotypic traits	70
	4.3.3 Units of selection conclusions	76
4.4	Prospects for whole-genome data	77
4.5	Conclusions	82
	5.3 Just ecouranhical structure	0
5	What causes speciation?	83
5.1	Introduction	83
5.2	Background	83
5.3	Geographical isolation	86
	5.3.1 Evidence from geographical ranges of sister species	86
	5.3.2 Evidence from oceanic islands	89
	5.3.3 Geographical opportunity versus organismal responses	92
	5.3.4 Geographical patterns of reproductive isolation	94
5.4	Divergent selection	98
	5.4.1 Ecological divergence and reproductive isolation	98
	5.4.2 Ecological traits and speciation	99
	5.4.3 Spatial pattern of ecological divergence	100
12	5.4.4 Ecological opportunity versus organismal responses	103
5.5	Towards a dynamic and integrated model of speciation	103
-	5.5.1 Future avenues	105
5.6	Conclusions	109
