

CONTENTS

<i>Preface</i>	xi
Introduction • What This Book Aims to Do and What It Is Not	1
Part I: Concepts and Mechanisms	
Chapter 1 • The Intellectual Challenge of Morphological Evolution: A Case for Variational Structuralism	7
Contrasting Ontologies	9
Facts and Ideas about Bodies	20
Re-focusing on the Role of Development	26
The Emergence of Molecular Structuralism	29
The Enigma of Developmental Variation	37
Chapter 2 • A Conceptual Roadmap to Homology	39
Two Observations: Sameness and Continuity	40
A Detour into Genetics: Homologous Genes	44
Character Identity and Character States	51
Characters and Character States: Who Is Who?	54
Variational Modalities: More Than One Way of Being	
a Certain Character	58
Character Identity and Repeated Body Parts: Serial Homology	65
Character Swarms: Persistent Cases of Partial Individuality	71
Alternative Conceptualizations of Homology	71
A Case for Conceptual Liberalism	78
Sorting Patterns of Morphological Variation	79

Chapter 3 • A Genetic Theory of Homology	82
Why Continuity of Genetic Information Is Not Enough	82
Lessons from the Variable Development of Homologs	90
Homeotic Genes and Character Identity	93
A Model: Character Identity Networks	96
Variation and Conservation of Segment Development	98
Eye Development and the <i>ey/so/eya/dac</i> (ESED) Networks	102
The Role of Protein-Protein Interactions	114
Characteristics of Character Identity Networks	117
Chapter 4 • Evolutionary Novelty: The Origin of Homologs	119
Modes of Evolution	120
Revisiting the Conceptual Roadmap: Which Way to Novelty?	123
Phenomenological Modes for the Origin of Type I Novelty	127
From Phenomenology to Explanation	135
Explaining Robustness and Canalization	151
Natural Selection and the Origin of Novelty: A Roundup	156
Chapter 5 • Developmental Mechanisms for Evolutionary Novelty	158
The Environment's Role in Evolutionary Innovations	158
Where Does the Positional Information for Novel Characters Come From?	164
Derived Mechanical Stimuli and the Origin of Novelty in the Avian Hind Limb Skeleton	170
The Origin of Character Identity Networks	173
The Evolution of Novel Signaling Centers	175
The Developmental Biology of Novelty: Reflections	184
Chapter 6 • The Genetics of Evolutionary Novelty	186
Evolution of cis-Regulatory Elements	187
Are Novel Pigment Spots Novelty, and Why Does It Matter?	195
Sex Combs: The Origin of a ChIN	199
Origin of Novel cis-Regulatory Elements: Transposable Elements	204
The Role of Gene Duplications	209
Evolution of Transcription Factor Proteins	213
The Evolution of miRNAs	224
A Material Difference between Innovation and Adaptation?	227

Chapter 7 • The Long Shadow of Metaphysics on Research Programs	229
Metaphysics as the Sister of Science	230
Classes and Individuals	232
Individuals and Natural Kinds	238
Definitions and Models	240
 Part II: Paradigms and Research Programs	
Chapter 8 • Cell Types and Their Origins	250
Developmental Genetics of Cell Types	253
The Evolutionary Origin of Cell Types	272
Case Studies of Cell Typogenesis	280
Concluding Reflections	292
Chapter 9 • Skin and a Few of Its Derivatives	294
Developmental Evolution of Amniote Skin and Skin Appendages	296
Mammalian Skin Derivatives: Hairs and Breasts	304
Devo-Evo of Bird Skin: Scales into Feathers	308
Origin of Feathers	313
Chapter 10 • Fins and Limbs	327
Paired Fins	327
From Fins to Limbs	333
Concluding Reflection on the Nature of Character Identity	354
Chapter 11 • Digits and Digit Identity	356
The Origin of Digits	356
Digits Come and Go: Is There a Pentadactyl Ground Plan?	357
Developmental and Morphological Heterogeneity of the Tetrapod Hand	359
Digit Loss and Re-evolution in Amniotes	365
The Pentadactyl Autopodium (PDA) Type	366
Developmental Genetics of Digit Identity	369
Digit Identity: Real or Imaginary?	374
A Fingerpost on the Nature of Character Identity	382

Chapter 12 • Flowers	385
What Is a Flower?	386
Angiosperm Phylogeny and Flower Character Evolution	389
Genetics of Canonical Flower Development	391
The Developmental Genetic Architecture of the Flower <i>Bauplan</i>	396
Flower Variation and Novel Flower Organ Identities	398
The Origin of the Bisexual Flower Developmental Type	401
Perianth Evolution and the Origin of Petals	407
Genetics of Organ Identity: Challenges from Gene Duplication	412
Summary and Conclusions	414
Chapter 13 • Lessons and Challenges	416
What Are the Core Claims of This Model of Homology?	416
Characters Are Real But Historically Limited	418
Homology Is Not Hierarchical	420
The Quasi-Cartesian Model of Character Identity	421
Character Individuality and Gene Regulatory Network Cooperativity	422
Open Questions and Difficulties	423
Population, Tree, and Homology Thinking	424
References	427
Index	467
