Preface	xvii
1 Introduction	1
1.1 Objectives	1
1.2 Further Reading	2
1.2.1 Matrix algebra	2
1.2.2 Elementary R	3
1.3 Guide to Notation	3
1.4 An Outline Guide to R	4
1.4.1 What is R ?	4
1.4.2 Installing R	5
1.4.3 R is an interactive program	5
1.4.4 Obtaining help in R	6
1.4.5 R is a function language	7
1.4.6 R is an object-oriented language	7
1.4.6.1 The class of an object	8
1.4.7 Saving objects and workspaces	8
1.4.7.1 Mistakenly saved workspace	9
1.4.8 R is a case-sensitive language	9
1.5 Inputting Data to R	9
1.5.1 Reading data from the keyboard	9
1.5.2 Reading data from files	10
1.6 Summary of Matrix Operators in R	10
1.7 Examples of R Commands	12
1.7.1 Expressions	12
1.7.2 Inputting data	12
1.7.3 Calculations	12
1.7.4 Dimensions and lengths of matrices of vectors	14
1.7.5 Joining matrices together	15
1.7.6 Diagonals and trace	16
1.7.7 Trace of products	16
1.7.8 Transpose of products	16
1.7.9 Determinants	17
1.7.10 Diagonal matrices	17
1.7.11 Inverses	17

1.7.12	Eigenanalyses	18
1.7.13	Singular value decomposition	18
1.8	Exercises	19
2	Vectors and Matrices	21
2.1	Vectors	21
2.1.1	Definitions	21
	<i>Example 2.1</i>	22
2.1.2	Creating vectors in \mathbf{R}	22
2.2	Matrices	23
2.2.1	Definitions	23
2.3	Matrix Arithmetic	25
2.3.1	Matrix multiplication	25
	<i>Example 2.2</i>	25
2.3.2	Example 2.2 in \mathbf{R}	27
2.4	Transpose and Trace of Sums and Products	29
2.5	Special Matrices	29
2.5.1	Symmetric and skew-symmetric matrices	29
2.5.2	Products with transpose AA'	30
2.5.3	Orthogonal matrices	30
	<i>Example 2.3</i>	30
2.5.4	Normal matrices	31
2.5.5	Permutation matrices	31
	<i>Example 2.4</i>	31
2.5.6	Idempotent matrices	31
	2.5.6.1 The centering matrix \mathbf{H}_n	32
2.5.7	Nilpotent matrices	32
2.5.8	Unipotent matrices	32
2.5.9	Similar matrices	32
2.6	Partitioned Matrices	32
2.6.1	Sub-matrices	32
	<i>Example 2.5</i>	33
2.6.2	Manipulation of partitioned matrices	33
	<i>Example 2.6</i>	34
2.6.3	Implementation of partitioned matrices in \mathbf{R}	34
2.7	Algebraic Manipulation of Matrices	35
2.7.1	General expansion of products	35
2.8	Useful Tricks	35
2.8.1	Tracking dimensions and 1×1 matrices	35
2.8.2	Trace of products	36
2.9	Linear and Quadratic Forms	36
	<i>Example 2.7</i>	36
2.10	Creating Matrices in \mathbf{R}	37
	<i>Example 2.8</i>	38

2.10.1	Ambiguity of vectors	39
2.11	Matrix Arithmetic in \mathbf{R}	39
2.11.1	Addition, subtraction and transpose	39
2.11.2	Multiplication	40
2.11.2.1	Standard multiplication	40
2.11.2.2	Element-by-element (Hadamard) multiplication	40
2.11.2.3	Non-commuting matrices	40
2.11.2.4	Commuting matrices	41
2.11.2.5	Transpose of products	41
2.11.2.6	Cross-products	42
2.11.2.7	Ambiguity of vectors	42
2.11.3	Diagonal matrices	43
2.11.3.1	Creating a diagonal matrix from a list	43
2.11.3.2	Extracting the diagonal	44
2.11.3.3	Converting a matrix to diagonal	44
2.11.4	Trace	44
2.11.4.1	Trace of square matrix	44
2.11.4.2	Trace of transpose and products	44
2.11.4.3	Creating a function for trace of a matrix	45
2.12	Initial Statistical Applications	46
2.12.1	Introduction	46
2.12.2	Linear models	46
2.12.3	Multivariate analysis	47
2.12.3.1	Random samples	47
2.12.3.2	Sample statistics in \mathbf{R}	48
2.13	Exercises	48
2.13.1	Notes	50
3	Rank of Matrices	51
3.1	Introduction and Definitions	51
	<i>Example 3.1</i>	51
3.1.1	Notes	52
	<i>Example 3.2</i>	53
3.2	Rank Factorization	53
3.2.1	Matrices of rank 1	53
3.2.2	$m \times n$ matrices of rank r	54
3.3	Rank Inequalities	54
3.3.1	Sum and difference	54
3.3.2	Products	54
3.3.2.1	Product with orthogonal matrix	54
3.3.3	Sub-matrices	54
3.4	Rank in Statistics	55
3.5	Exercises	56

4	Determinants	59
4.1	Introduction and Definitions	59
	<i>Example 4.1</i>	59
4.1.1	Notes	61
	<i>Example 4.2</i>	61
4.2	Implementation in \mathbf{R}	62
	<i>Example 4.3</i>	62
4.3	Properties of Determinants	62
4.3.1	Elementary row and column operations	62
4.3.2	Other properties of determinants	62
4.3.3	Illustrations of properties of determinants	63
4.4	Orthogonal Matrices	65
	<i>Example 4.4</i>	65
4.5	Determinants of Partitioned Matrices	65
4.5.1	Some basic results	65
4.6	A Key Property of Determinants	66
4.6.1	General result	66
	4.6.1.1 Note	67
4.6.2	Important special cases	67
4.7	Exercises	67
5	Inverses	71
5.1	Introduction and Definitions	71
	<i>Example 5.1</i>	71
5.1.1	Notes	72
5.2	Properties	72
5.2.1	Singular and non-singular matrices	72
5.2.2	Uniqueness	72
5.2.3	Inverse of inverse	73
5.2.4	Determinant of inverse	73
5.2.5	Inverse of transpose	73
5.2.6	Inverse of product	73
	5.2.6.1 Rank of product with non-singular matrix	73
5.2.7	Orthogonal matrices	73
5.2.8	Scalar products of matrices	73
5.2.9	Left and right inverses	73
5.3	Implementation in \mathbf{R}	74
	<i>Example 5.2</i>	74
5.4	Inverses of Patterned Matrices	75
5.4.1	Matrices of form $\alpha \mathbf{I}_n + \beta \mathbf{t}_n \mathbf{t}'_n$	76
5.4.2	Matrices of form $\mathbf{A} + \mathbf{xy}'$	77
	<i>Example 5.2</i>	77
5.5	Inverses of Partitioned Matrices	78

5.5.1	Some basic results	78
5.5.1.1	Notes	79
5.6	General Formulae	79
	<i>Example 5.3</i>	79
5.7	Initial Applications Continued	80
5.7.1	Linear equations	80
5.7.2	Linear models	80
5.7.3	Multivariate methods	80
5.8	Exercises	81
6	Eigenanalysis of Real Symmetric Matrices	83
6.1	Introduction and Definitions	83
	<i>Example 6.1</i>	84
6.2	Eigenvectors	84
6.2.1	General matrices	85
6.3	Implementation in \mathbf{R}	85
	<i>Example 6.2</i>	85
	6.3.0.1 Notes on examples	86
6.4	Properties of Eigenanalyses	87
6.4.1	Properties related to uniqueness	87
6.4.2	Properties related to symmetric matrices	88
	6.4.2.1 Eigenvectors of non-symmetric matrices	88
	6.4.2.2 Illustration of biorthogonality	89
6.4.3	Properties related to functions of matrices	89
6.4.4	Properties related to determinants	90
6.4.5	Properties related to diagonalisation	90
6.4.6	Properties related to values of eigenvalues	91
6.4.7	Rank and non-zero eigenvalues	91
	6.4.7.1 Example of non-symmetric matrix	92
6.5	A Key Statistical Application: PCA	92
6.6	Matrix Exponential	93
6.7	Decompositions	93
6.7.1	Spectral decomposition of a symmetric matrix	93
	6.7.1.1 Square root of positive semi-definite matrices	94
6.7.2	Singular value decomposition (svd) of an $m \times n$ matrix	94
	6.7.2.1 Proof of svd	94
	6.7.2.2 Note	94
6.7.3	Implementation of svd in \mathbf{R}	94
	<i>Example 6.3</i>	95
6.8	Eigenanalysis of Matrices with Special Structures	100
6.8.1	The rank one matrix \mathbf{xx}'	100
6.8.2	The rank one matrix \mathbf{Sxx}'	100
6.8.3	The matrix $a\mathbf{I}_n + b\mathbf{xy}'$	100
6.9	Summary of Key Results	101

6.10 Exercises	101
7 Vector and Matrix Calculus	103
7.1 Introduction	103
7.2 Differentiation of a Scalar with Respect to a Vector	104
7.2.1 Derivative of $\mathbf{a}'\mathbf{x}$	104
7.2.2 Derivative of $\mathbf{x}'\mathbf{x}$	104
7.2.3 Derivative of quadratic forms $\mathbf{x}'\mathbf{S}\mathbf{x}$	104
7.3 Differentiation of a Scalar with Respect to a Matrix	105
7.3.1 Derivative of $\text{tr}(\mathbf{X})$	105
7.3.2 Derivative of $\mathbf{a}'\mathbf{X}\mathbf{a}$ when \mathbf{X} is not symmetric	105
7.3.3 Derivative of $\mathbf{a}'\mathbf{X}\mathbf{a}$ when \mathbf{X} is symmetric	106
7.3.4 Derivative of $\text{tr}(\mathbf{X}\mathbf{A})$ when \mathbf{X} is not symmetric	106
7.3.5 Derivative of $\text{tr}(\mathbf{X}\mathbf{A})$ when \mathbf{X} is symmetric	106
7.3.6 Derivative of $\text{tr}(\mathbf{A}'\mathbf{X}\mathbf{A})$	106
7.3.7 Derivative of $ \mathbf{X} $ when \mathbf{X} is not symmetric	106
7.3.7.1 General proof in non-symmetric case	106
7.3.8 Derivative of $ \mathbf{X} $ when \mathbf{X} is symmetric	107
7.3.8.1 General proof in symmetric case	107
7.3.9 Derivative of $ \mathbf{X} ^r$	107
7.3.10 Derivative of $\log(\mathbf{X})$	107
7.4 Differentiation of a Vector with Respect to a Vector	107
7.4.1 Derivative of $\mathbf{A}\mathbf{x}$	108
7.5 Differentiation of a Matrix with Respect to a Scalar	108
7.5.1 $\mathbf{A} = (1, x, x^2, x^3, \dots, x^{n-1})$	108
7.5.2 Autocorrelation matrix	108
7.6 Use of Eigenanalysis in Constrained Optimization	109
Example 7	109
7.7 Exercises	111
8 Further Topics	113
8.1 Introduction	113
8.2 Further Matrix Decompositions	113
8.2.1 \mathbf{QR} Decomposition	113
8.2.1.1 Implementation in \mathbf{R}	114
Example 8.1	114
8.2.2 \mathbf{LU} and \mathbf{LDU} decompositions	117
8.2.2.1 Implementation in \mathbf{R}	117
Example 8.2	118
8.2.3 Cholesky decomposition	120
8.2.3.1 Implementation in \mathbf{R}	120
Example 8.3	120
8.2.4 Schur decomposition	121

8.2.4.1	Implementation in \mathbf{R}	121
<i>Example 8.4</i>	121
8.2.5	Application to obtaining eigenvalues	122
8.2.6	Application to finding determinants	122
8.2.7	Applications of decompositions to solving $\mathbf{Ax} = \mathbf{y}$	122
8.2.8	Application to matrix inversion	123
8.3	Generalized Inverses	123
8.3.1	Moore–Penrose inverse	124
8.3.2	Moore–Penrose inverses in \mathbf{R}	125
<i>Example 8.5</i>	125
8.3.3	Generalized inverse	128
<i>Example 8.6</i>	128
8.3.3.1	Solutions of linear equations	130
<i>Example 8.7</i>	132
8.4	Hadamard Products	133
8.5	Kronecker Products and the Vec Operator	134
8.5.1	Elementary properties of Kronecker products	135
8.5.2	Further properties of Kronecker products	135
8.5.3	Decompositions of Kronecker products	136
8.5.4	Eigenanalyses and determinants of Kronecker products	137
8.5.5	Elementary properties of the vec operator	137
8.5.6	Connections between Kronecker products and vec operators	138
8.5.7	Kronecker products and vec operators in \mathbf{R}	138
<i>Example 8.8</i>	139
8.6	Exercises	141
9	Key Applications to Statistics	143
9.1	Introduction	143
9.2	The Multivariate Normal Distribution	143
9.2.1	Standardization	144
9.2.2	Random samples	144
9.2.3	Maximum likelihood estimates	144
9.2.4	The maximized log-likelihood	145
9.2.5	Examples of likelihood ratio tests	146
9.2.5.1	One-sample T^2 -test	146
9.2.5.2	Multisample tests: MANOVA	147
9.2.5.3	The hypothesis $H_0 : \mu' \mu = r_0^2$	148
9.2.6	Union-intersection tests	149
9.2.7	Examples of union-intersection tests	149
9.2.7.1	Two-sample T^2 -test	149
9.2.7.2	Test of $H_0 : \Sigma = \Sigma_0$ against $H_A : \Sigma \neq \Sigma_0$	150
9.2.7.3	Multisample tests: MANOVA	150
9.3	Principal Component Analysis	151
9.3.1	Derivation	151

9.3.2	Calculations in \mathbf{R}	152
9.3.3	Population and sample principal components	153
9.4	Linear Discriminant Analysis	155
9.4.1	Derivation of crimcoords	155
9.4.2	Calculation in \mathbf{R}	156
9.5	Canonical Correlation Analysis	158
9.5.1	Derivation of canonical variates	158
9.5.2	Calculation in \mathbf{R}	159
9.6	Classical Scaling	160
9.6.1	Calculation in \mathbf{R}	160
9.7	Linear Models	161
9.7.1	Introduction	161
9.7.2	The standard linear regression model	161
9.7.2.1	Estimation of parameters	161
9.7.2.2	The Gauss–Markov theorem	162
9.7.2.3	Residuals and estimation of error variance	162
	Example 9.1	163
	Example 9.2	163
9.7.3	Least squares estimation with constraints	164
	Example 9.3	165
9.7.4	Crossover trials	166
9.7.4.1	Obtaining the design matrix in \mathbf{R}	167
9.8	Exercises	168
	Outline Solutions to Exercises	171
	Chapter 1: Introduction	171
	Chapter 2: Vectors and Matrices	172
	Chapter 3: Rank of Matrices	179
	Chapter 4: Determinants	186
	Chapter 5: Inverses	192
	Chapter 6: Eigenanalysis	196
	Chapter 7: Vector and Matrix Calculus	200
	Chapter 8: Further Topics	202
	Chapter 9: Key Applications to Statistics	211
	Bibliography	217
	Index	221
