Contents

Preface xi

1 Introduction 3

2 Natural Selection 7

2.1 Aggregate Quantities 8
Covariance of a Character and Fitness; Dynamic Sufficiency

2.2 Partitions and Causal Analysis 11
The Price Equation; Causal Analysis; Predictors and Additivity; Fisher's Fundamental Theorem; Kin Selection

2.3 Genotypes and Phenotypes 25
Phenotypes and Market Share; Genetics: Constraints on Paths of Phenotypic Evolution; Resolution: The Spectrum of Mutations

2.4 Comparative Statics and Dynamics 31
The Importance of Comparison; Dynamic Assumptions in Comparative Statics

2.5 Maximization and Measures of Value 33
Reproductive Value; Kin Selection; Game Theory, ESS; Difficulties

3 Hamilton's Rule 45

3.1 Overview 46

3.2 Hamilton's 1970 Proof 47
Direct Fitness; Inclusive Fitness; Hamilton's Rule

3.3 Queller's Quantitative Genetic Model 50

3.4 Exact-Total Models 53
Exact Hamilton's Rule; Example: Rebellious Child Model

3.5 Coefficients of Relatedness 56
3.6 Prospects for Synthesis 58

4 Direct and Inclusive Fitness 59
4.1 Modified Price Equation 60
4.2 Regression Equations 62
Direct Fitness; Inclusive Fitness; Comparison of Direct and Inclusive Fitness; Comparison with Queller's Analysis; Nonadditive Models
4.3 Maximization 69
Marginal Direct and Inclusive Fitness; Marginal Hamilton's Rule
4.4 Coefficients of Relatedness 74
Example: Sex Ratio; Transmitted Breeding Value

5 Dynamics of Correlated Phenotypes 79
5.1 Games with Saddles: Peak Shifts 79
5.2 Correlated Phenotypes 82
Small Deviations; Large Deviations; Comparative Dynamics
5.3 Strategy Set 88
Mixed Strategies; Pure Strategies; Two Species, Mixed Strategies

6 Relatedness as Information 94
6.1 Interpretation of Relatedness Coefficients 95
6.2 Conditional Behavior 98
Help Only When Weaker of Pair; Both Weaker and Stronger Can Help; One Trait for Each Condition; Conditional Response Surface
6.3 Kin Recognition 104
Indicator and Behavioral Traits; Common Genealogy; Context and Indicators: Bayesian Analysis; Polymorphism at Matching Loci
6.4 Correlated Strategy and Information 113

7 Demography and Kin Selection 114

7.1 Viscous Populations 114

7.2 Dispersal in a Stable Habitat 116
Hamilton and May's Model; Mendelian Analysis; Analysis by Kin Selection; Demographic Analysis; Summary of Dispersal Analysis; Primacy of Comparative Statics

7.3 Joint Analysis of Demography and Selection 123
Cytoplasmic Incompatibility; Demography Independent Case; Fixed Demography; Variable Demography; Comparative Predictions: Variables and Parameters

7.4 Components of Fitness 129
Tragedy of the Commons; Parasite Virulence

8 Reproductive Value 134

8.1 Social Interactions between Classes 134
Reproductive Value of Each Class; Life History: Technical Details; Example One: Direct and Inclusive Fitness; Example Two: Sex Ratio; Summary of Maximization Method

8.2 Child Mortality in Social Groups 145
Simplest Models; Population Growth: Variable or Parameter?; Cycle Fitness; Maternal Control; Actors in More Than One Class

8.3 Parasite Virulence 163

8.4 Social Evolution in Two Habitats 166
Conditional Behavior: Different Traits in Different Habitats; Unconditional Behavior: Same Trait in Different Habitats

8.5 Review of the Three Measures of Value 170

9 Sex Allocation: Marginal Value 172

9.1 Fisher's Theory of Equal Allocation 173

9.2 The Three Measures of Value 174
Reproductive Value; Kin Selection Coefficients; Marginal Value
9.3 Variable Resources and Conditional Adjustment 178
All Male or All Female by Constraint; All Male or All Female Favored by Selection; Mixed Allocation Favored in Some Classes
9.4 Returns per Individual Offspring 183
Definition of Investment Period; Fisherian Equal Allocation for High Fecundity per Investment Period; Complexities of Low Fecundity per Investment Period
9.5 Critique of the Costs of Males and Females 187
9.6 Multiple Resources 189

10 Sex Allocation: Kin Selection 191
10.1 Haplodiploidy 192
Relatedness and Reproductive Value; Mechanism of Conditional Sex Ratio Adjustment
10.2 Competitive and Cooperative Interactions among Relatives 194
10.3 Sex Ratio Games 199
Simultaneous Game; Sequential Game; Sequential Game with Variable Brood Size and Dispersal
10.4 Social Topics 207
Conflict between Queen and Workers; Split Sex Ratios and the Origins of Social Behavior

11 Sex Allocation: Reproductive Value 214
11.1 Current versus Future Reproduction 214
11.2 Shifts in Sex Allocation with Age 218
11.3 Perturbation of Stable Age Structure 222

11.4 Cyclical Age Structure with Male–Female Asymmetry 224
Alternative Demographic Matrices; Abundance; Reproductive Value; Fitness; Alternative Life Histories and Biological Consequences
11.5 Transmission of Individual Quality 231
11.6 Juveniles of One Sex Help Parents 235
11.7 Multigeneration Colonies 238
General Formulation; Social Spider Example

12 Conclusions 243
12.1 Statics 243
Maximization and Measures of Value; Statics Is a Method
12.2 Dynamics 244
Technical Issues; Conflict and Power
