

Table of Contents

Preface	1
1. Some Growth Models	3
1.1 A General Growth Model	4
1.2 The Harrod Model	6
1.3 The Domar Model	7
1.4 The Solow-Swan Model	8
1.5 The Frankel Model	10
1.6 Some Conclusions	11
2. The Ramsey Model	13
2.1 The Model	13
2.1.1 The Assumptions	15
2.1.2 Feasible Paths	16
2.2 Existence of Optimal Paths	16
2.3 Properties of the Optimal Paths	19
2.4 Value Function - Bellman Equation - Optimal Policy	21
2.4.1 Some Properties of the Value Function	22
2.4.2 Bellman Equation	25
2.4.3 Optimal Policy	29
2.4.4 Dynamic Properties of the Optimal Path	31
2.4.5 Mangasarian Lemma	32
2.4.6 On the Continuity of the Value Function and of the Optimal Policy with respect to the Dis- count Factor and the initial Capital Stock	34
3. An Aggregated Optimal Growth Model with a Convex- Concave Production Function	37
3.1 The Model	38
3.1.1 The Assumptions	39

3.1.2 Feasible Paths	39
3.2 Existence of Optimal Paths	40
3.3 Properties of the Optimal Paths	40
3.4 Value Function - Bellman Equation - Optimal Policy	41
3.4.1 Some Properties of the Value Function	41
3.4.2 Bellman Equation	42
3.4.3 Optimal Correspondence	43
3.4.4 On the Differentiability of the Value Function	45
3.4.5 Dynamic Properties of the Optimal Paths	49
3.5 On the Mangasarian Lemma	60
4. Multisector Optimal Growth Models With Bounded From Below Returns	63
4.1 The General Case	66
4.1.1 Existence of an optimal solution	67
4.1.2 Value Function and Optimal Correspondence	69
4.1.3 Properties of Optimal Paths	77
4.1.4 On the Continuity of the Value Function and of the Optimal Correspondence with respect to (β, x_0)	78
4.2 The Case with Concave Return Function and Convex Technology	80
4.2.1 The One Dimension Case	84
4.3 Examples	86
4.3.1 Example 1 (The Ramsey Model)	86
4.3.2 Example 2	87
4.3.3 Example 3: A Consumption-Savings Problem	89
4.3.4 Example 4: A Two-Sector Model	92
4.3.5 Example 5: A Human Capital Model	94
4.3.6 Example 5: Learning by Doing Model	96
5. Optimal Growth Models With Unbounded From Below Returns	101
5.1 The Model	102
5.2 Existence of Optimal Solutions	103
5.3 Value Function	105
5.4 Optimal Policy - Properties of Optimal Paths	113

5.5	Examples	115
5.5.1	Example 1	115
5.5.2	Example 2: The AK model	118
6.	Optimal Growth and Competitive Equilibrium	121
6.1	The Model	121
7.	Optimal Growth Models Without Discounting	131
7.1	The Model	132
7.2	Good programmes	132
7.3	Optimal Programmes	137
7.4	Value Function - Bellman Equation	141
8.	Turnpike in Optimal Growth Models with Convex Technology	149
8.1	The Visit Lemmas	150
8.2	The Neighborhood Turnpike	155
8.3	Turnpike Theorems	159
8.4	Remarks	162
9.	Cycles and Chaos in Optimal Growth Models	165
9.1	Two-Sector Models	165
9.1.1	The model	165
9.1.2	Examples	167
9.1.3	Optimal interior stationary state	168
9.1.4	Difficulties	170
9.1.5	Existence of periodic orbits.	171
9.2	Optimal chaos	173
9.2.1	Two definitions of complicated dynamics	173
9.2.2	"Rationalizability" of a map	175
9.3	Appendix	177
A.	Appendix	181
A.1	Metric Spaces and Normed Spaces	181
A.1.1	Distances and Metric Spaces	181
A.1.2	Topology on Metric Spaces	182
A.1.3	Compact Spaces, Compact Sets	185
A.1.4	Normed Spaces	185

A.1.5 Product Topology.....	186
A.2 Concave Functions	187
A.2.1 Subdifferentiability, Differentiability of Concave Functions	188
A.3 Negative Matrix	189
A.4 The Implicit Functions Theorem	190
A.5 Correspondences, The Maximum Theorem	190
A.5.1 Examples	191
Bibliography	193
Index	199
