Introduction 3

I Fundamentals 9

1 Basic Probability 11

1.1 Notation 11

1.2 Discrete Random Variables and Distributions 15

1.3 Conditional Expectation 18

Appendices

1.1 The Poisson Process 19

1.2 Continuous Random Variables 25

1.3 Some Other Probability Distributions 29

1.4 Renewal Processes 37

2 Patch Selection 41

2.1 Patch Selection as a Paradigm 41

2.2 Biological Examples 42

2.3 The Simplest State Variable Model 45

2.4 An Algorithm for the Dynamic Programming Equation 52

2.5 Elaborations of the Simplest Model 58

2.6 Discussion 63

Appendices

2.1 Further Elaborations of the Patch Selection Paradigm 63

2.1.1 Alternative Constraints 63

2.1.2 Variable Handling Times 64

2.1.3 A Diet Selection Model 65

2.1.4 A Model with "Fat Reserves" and "Gut Contents" 67

2.1.5 Sequential Coupling 69

2.1.6 Uncertain Final Time 71

2.2 Lifetime Fitness and Utility 73

2.3	Behavioral Observations and Forward Iteration	76
2.4	The Fitness of Suboptimal Strategies	79
	Addendum to Part I: How to Write a Computer Program	82
II	Applications	105
3	The Hunting Behavior of Lions	107
3.1	The Serengeti Lion	108
3.2	Some Possible Explanations of Lions' Hunting Behavior	109
3.3	A Dynamic Model	113
3.4	Communal Sharing	121
3.5	Discussion	124
4	Reproduction in Insects	126
4.1	Fitness from Egg Production and Experimental Background	126
4.2	A Model with Mature Eggs Only	131
4.3	A Model with Mature Eggs and Oocytes	142
4.4	Parasitism and Density Dependence	143
4.5	Discussion	148
5	Migrations of Aquatic Organisms	149
5.1	Diel Vertical Migrations of Zooplankton	152
5.1.1	Cladocerans	153
5.1.2	Copepods	162
5.2	Diel Migrations of Planktivores	165
5.2.1	A Model of Aquatic Predation	167
5.2.2	A Dynamic Model of Diel Migrations	171
5.3	Predictions of Zooplankton Migrations	178
6	Parental Allocation and Clutch Size in Birds	182
6.1	A Single-Year Model of Parental Allocation and Clutch Size	183
6.2	A Multi-Year Model of Parental Allocation and Clutch Size	192

6.3	Hypothesis Generation and Testing Dynamic Behavioral Models	195
7	Movement of Spiders and Raptors	198
7.1	Movement of Orb-Weaving Spiders	199
7.2	Population Consequences of Natal Dispersal	204
III	Additional Topics	213
8	Formulation and Solution of State Variable Models	215
8.1	Identifying State Variables, Constraints, and Dynamics	217
8.2	The Optimization Criterion: Fitness	223
8.3	The Dynamic Programming Algorithm	225
8.3.1	Computer Realization	228
8.3.2	Discretization and Interpolation	228
8.3.3	Sequential Coupling	231
8.3.4	Stationarity	232
8.4	Alternative Modeling Approaches	233
8.4.1	Average-Rate Models	233
8.4.2	Mean-Variance Models	235
8.4.3	Life-History Models	238
8.4.4	Optimal Control Theory	238
	Appendix	
8.1	Fitness in Fluctuating Environments	240
9	Some Extensions of the Dynamic Modeling Approach	247
9.1	Learning	247
9.2	Dynamic Behavioral Games	259
9.2.1	A Dynamic Game between Tephritid Flies	261
9.2.2	A Game between Juvenile Coho Salmon	270
	Epilogue: Perspectives on Dynamic Modeling	280
	References	289
	Author Index	303
	Subject Index	306
