Preface . . . . .	xi
About the Authors . . . . .	xiii
<b>1 Nature's Porous Materials: From Beautiful to Practical . . . . .</b>	<b>1</b>
1.1 Living Porosity . . . . .	1
1.1.1 Butterflies . . . . .	1
1.1.2 Algae . . . . .	4
1.1.3 Bamboo . . . . .	8
1.2 Clay Minerals . . . . .	8
1.2.1 Natural Clays . . . . .	8
1.2.2 Pillared Interlayered Clays – PILCs . . . . .	12
References . . . . .	13
<b>2 Theory of Adsorption and Catalysis: Surface Area and Porosity . . . . .</b>	<b>15</b>
2.1 Determination of Surface Area and Porosity by Gas Sorption . . . . .	15
2.1.1 Introduction . . . . .	15
2.1.2 Chemisorption and Physisorption . . . . .	15
2.1.3 Reversible Monolayer Adsorption – The Langmuir Isotherm . . . . .	16
2.2 The BET (Brunauer, Emmet, Teller) Model . . . . .	21
2.2.1 The BET Equation . . . . .	21
2.2.2 Multipoint BET Analysis . . . . .	23
2.3 Capillary Condensation and Pore Size, the Type IV Isotherm . . . . .	25
2.3.1 The Kelvin and the Halsey Equation . . . . .	25
2.3.2 Barrett, Joyner, Halenda (BJH) Pore Size Distributions . . . . .	27
2.3.3 Types of Adsorption Isotherms . . . . .	32
2.3.4 Adsorption Hysteresis . . . . .	34
2.3.5 Evaluation of Micropores . . . . .	36
2.4 Liquid Phase Adsorption – Langmuir and Freundlich Isotherms . . . . .	37
2.4.1 Adsorption Kinetics . . . . .	38
2.4.2 Adsorption Isotherms . . . . .	40
2.5 Heterogeneous Catalysis . . . . .	42
2.5.1 Introduction . . . . .	42
2.5.2 Types of Catalysis . . . . .	44
2.5.3 Toward Green and Sustainable Industrial Chemistry . . . . .	46
2.5.4 Kinetics in a Heterogeneous Catalytic Reaction . . . . .	50
2.5.5 Diffusion Phenomena . . . . .	57
2.A Appendix . . . . .	66
Exercises . . . . .	68
Answers to the Problems . . . . .	71
References . . . . .	73

<b>3</b>	<b>Zeolites and Zeotypes</b>	<b>75</b>
3.1	Crystallographic Directions and Planes	75
3.1.1	Crystallographic Directions	75
3.1.2	Crystallographic Planes	77
3.2	X-Ray Diffraction	80
3.3	Zeolite Structures	82
3.4	Applications of Zeolites	85
3.4.1	Ion-Exchange, Water Softening	85
3.4.2	Catalysis	88
3.4.3	Gas Sorption and Purification	109
3.5	Solid-State NMR	111
3.5.1	Introduction to the Technique NMR	111
3.5.2	Nuclear Magnetic Resonance: The Basics	112
3.5.3	Solid-State NMR: The Challenges	115
3.5.4	The Application of Solid-State NMR	118
	References	118
<b>4</b>	<b>Silica, A Simple Oxide – A Case Study for FT-IR Spectroscopy</b>	<b>121</b>
4.1	Different Methods to Synthesize Silica	121
4.1.1	Silica Gels and Sols	121
4.1.2	Pyrogenic Silicas	126
4.1.3	Precipitated Silicas	127
4.2	The Surface of Silica	127
4.3	Fourier Transform Infrared Spectroscopy	129
4.3.1	Principles of Infrared Spectroscopy	130
4.3.2	Principles of FT-IR	133
4.3.3	DRIFTS – Diffuse Reflectance Infrared Fourier Transform Spectroscopy	138
4.3.4	Attenuated Total Reflection	140
	References	142
<b>5</b>	<b>Ordered Mesoporous Silica</b>	<b>145</b>
5.1	MCM-41 and MCM-48 – Revolution by the Mobil Oil Company	145
5.1.1	The Original Papers and Patents	145
5.1.2	Calculating the Wall Thickness	150
5.1.3	Interaction Between Surfactant and Inorganic Precursor	151
5.1.4	The Surfactant Packing Parameter	154
5.1.5	Hexagonal Mesoporous Silica	156
5.1.6	Stable Ordered Mesoporous Silica – SBA	157
5.1.7	Plugged Hexagonal Templated Silica	161
5.1.8	The New MCM-48: KIT-6	163
5.1.9	Further Developments of Mesoporous Silica	165
5.1.10	Pore Size Engineering	167
5.1.11	Making Thin Films – The EISA Principle	167
5.2	Applications of Mesoporous Silica	168
5.2.1	In Heterogeneous Catalysis – Functionalization of Mesoporous Silica	168
5.2.2	In Adsorption	183
5.2.3	As a Drug Carrier	188
5.2.4	Low- <i>k</i> Dielectrics	189
	References	191

<b>6</b>	<b>Carbons</b>	<b>195</b>
6.1	Activated Carbon	195
6.2	General Introduction to Mesoporous Carbons	197
6.2.1	Synthesis of Hard-Templated Mesoporous Carbons	198
6.2.2	Synthesis of Soft-Templated Mesoporous Carbons	204
6.2.3	Influence of Synthesis Conditions on the Soft-Templated Method	207
6.2.4	Transformation of Polymer into Carbon, the Carbonization Temperature	215
6.2.5	(Hydro)Thermal and Mechanical Stability	216
6.3	Surface Modification of Mesoporous Polymers and Carbons	217
6.3.1	Pre-Modification of Polymers/Carbons	218
6.3.2	Post-Modification of Polymers/Carbons	218
6.4	Nanocarbons	218
6.4.1	Fullerenes	219
6.4.2	Carbon Nanotubes	224
6.5	Application of Porous Carbon-Based Materials	227
6.5.1	The Adsorption of Pollutants	227
6.5.2	As Catalytic Support or Direct Heterogeneous Catalyst	231
6.5.3	Electrochemical Applications: Energy Storage	237
	Exercises	243
	Answers to the Problems	243
	References	245
<b>7</b>	<b>The Era of the Hybrids – Part 1: Periodic Mesoporous Organosilicas or PMOS</b>	<b>249</b>
7.1	Introduction	249
7.2	Synthesis of PMOs	253
7.2.1	General Aspects of PMO Synthesis	253
7.2.2	PMOs with Aliphatic Bridges	257
7.2.3	PMOs with Olefinic and Aromatic Bridges	258
7.2.4	PMOs with Multi-Organic Bridges	264
7.3	General Properties of PMOs	265
7.3.1	Pore Size Engineering	265
7.3.2	(Hydro)thermal and Chemical Stability	267
7.3.3	Metamorphosis in PMOs	269
7.4	Post-Modification of PMOs	270
7.4.1	Post-Functionalization of the Unsaturated Bridges	271
7.4.2	Post-Modification of the Aromatic Ring	275
7.5	Applications of PMOs	276
7.5.1	As Heterogeneous Catalysts	276
7.5.2	As Adsorbents of Metals, Organic Compounds, and Gases	290
7.5.3	As Solid Chromatographic Packing Materials	294
7.5.4	As Low- <i>k</i> Films	297
7.5.5	As Biomedical Supports	298
	Exercises	300
	Answers to the Problems	302
	References	303
<b>8</b>	<b>Era of the Hybrids – Part 2: Metal–Organic Frameworks</b>	<b>309</b>
8.1	Introduction	309
8.2	Isorecticular Synthesis	312

8.3	Well-Known MOFs . . . . .	313
8.3.1	Cu-BTC . . . . .	314
8.3.2	MIL-53 . . . . .	314
8.3.3	MIL-101 . . . . .	315
8.3.4	UiO-66 . . . . .	315
8.3.5	NU-1000 . . . . .	317
8.3.6	ZIF-8 . . . . .	318
8.4	Stability of MOFs . . . . .	318
8.5	Preparation of MOFs . . . . .	320
8.5.1	Hydro- and Solvothermal Synthesis . . . . .	320
8.5.2	Microwave-Assisted Synthesis . . . . .	320
8.5.3	Electrochemical Synthesis Route . . . . .	321
8.5.4	High-Throughput Analysis . . . . .	321
8.6	Functionalities in MOFs . . . . .	321
8.6.1	Active Sites in MOFs . . . . .	321
8.6.2	Multifunctional MOFs . . . . .	322
8.7	Applications of MOFs . . . . .	332
8.7.1	MOFs in Gas Storage and Gas Separation . . . . .	332
8.7.2	MOFs in Catalysis . . . . .	351
8.7.3	Luminescent MOFs . . . . .	355
8.8	Industrial Applications of MOFs . . . . .	364
8.9	Transmission Electron Microscopy . . . . .	366
8.9.1	Electron Diffraction and Bright Field Imaging . . . . .	367
8.9.2	High-Resolution Transmission Electron Microscopy . . . . .	368
8.9.3	Scanning Transmission Electron Microscopy . . . . .	369
8.9.4	Energy Dispersive X-Ray Spectroscopy . . . . .	371
8.9.5	Electron Energy Loss Spectroscopy . . . . .	371
8.9.6	Electron Tomography . . . . .	371
	Exercises . . . . .	372
	Answers to the Problems . . . . .	374
	References . . . . .	377
<b>9</b>	<b>Beyond the Hybrids – Covalent Organic Frameworks . . . . .</b>	<b>381</b>
9.1	Classification and Nature of COFs . . . . .	381
9.2	Design of COFs . . . . .	383
9.3	Boron-Based COFs . . . . .	386
9.3.1	Introduction . . . . .	386
9.3.2	Other Synthetic Routes to Obtain Boron-Based COFs . . . . .	389
9.3.3	Methods to Increase the Stability of Boron-Based COFs . . . . .	391
9.3.4	Applications of Boron-Containing COFs . . . . .	392
9.4	Covalent Triazine Frameworks . . . . .	395
9.4.1	Ionothermal Synthesis of Covalent Triazine Frameworks . . . . .	395
9.4.2	Acid Assisted Synthesis Route . . . . .	398
9.4.3	Mechanochemical Synthesis . . . . .	398
9.4.4	Applications of CTFs . . . . .	399
9.5	Imine COFs . . . . .	404
9.5.1	Solvothermal Synthesis: COF-300 . . . . .	404
9.5.2	Room Temperature Synthesis of Imine COFs . . . . .	406
9.5.3	Liquid Assisted Grinding . . . . .	407
9.5.4	Applications of Imine COFs . . . . .	408

Exercises . . . . .	414
Answers to the Problems . . . . .	415
References . . . . .	417

<b>Index . . . . .</b>	<b>419</b>
------------------------	------------

This book is the first of its kind to discuss the development and applications of various materials since their early start in the 1950s until now, the end of 2018. It is intended
