	Commentary and Introduction	xi
	Preface to Papers	xvii
	Article 6: Robert E. Ulanowicz (1979). Complexity, stability, and self-organization in natural communities. <i>Oecologia</i> , 43, 202–208.	
	Article 7: Peter Van Voris, Robert V. O'Neill, William R. Emanuel, and Herman H. Slaughter, Jr. (1980). Functional complexity and ecosystem stability. <i>Ecology</i> , 61, 1352–1360.	
	Article 8: Robert T. Paine and Simon A. Levin (1978). Landscapes: disturbance and the dynamics of patch interactions. <i>Monographs</i> , 51, 143–178.	
	Article 9: Ilkka Hanski and Mats Cylindere (1997). Uniformity in the distribution of species. <i>Science</i> , 275, 397–400.	
	Article 10: James H. Brown and Robert M. May (1973). The division of labor and space among species. <i>Science</i> , 243, 1143–1150.	
	Concluding Remarks	10
	Literature Cited	10
	Commentary and Introduction	10
	Preface to Papers	12
	Hierarchy as a Means of Specifying Perspective	13
	Article 1: Bernard C. Patten (1978). Systems approach to the concept of environment. <i>Ohio Journal of Science</i> , 78, 206–222.	14
	Article 2: Timothy F. H. Allen, Robert V. O'Neill and Thomas W. Hoekstra (1984). Interlevel relations in ecological research management: some working principles from hierarchy theory. Forest Service General Technical Report RM 110.	33
	Understanding the Implications of Scale	45
	Article 3: Simon A. Levin (1992). The problem of pattern and scale in ecology. <i>Ecology</i> , 73, 1943–1967.	47
	Article 4: William C. Clark (1985). Scales of climate impacts. <i>Climate Change</i> , 7, 5–27.	73
	Complex Emergent Interactions	97
	Article 5: Crawford S. Holling (1992). Cross-scale morphology, geometry, and dynamics of ecosystems. <i>Ecological Monographs</i> , 62, 447–502.	98
	Concluding Remarks	143
	Literature Cited	144

2	Diversity in Ecology and Conservation	148
	Commentary and Introduction	148
	Preface to Papers	152
	Article 6: Robert E. Ulanowicz (1979). Complexity, stability and self-organization in natural communities. <i>Oecologia</i> , 43, 295–298.	152
	Article 7: Peter Van Voris, Robert V. O'Neill, William R. Emanuel and Herman H. Shugart, Jr. (1980). Functional complexity and ecosystem stability. <i>Ecology</i> , 61, 1352–1360.	158
	Article 8: Robert T. Paine and Simon A. Levin (1981). Intertidal landscapes: disturbance and the dynamics of pattern. <i>Ecological Monographs</i> , 51, 145–178.	168
	Article 9: Ilkka Hanski and Mats Gyllenberg (1997). Uniting two general patterns in the distribution of species. <i>Science</i> , 275, 397–400.	203
	Article 10: James H. Brown and Brian A. Maurer (1989). Macroecology: the division of food and space among species on continents. <i>Science</i> , 243, 1145–1150.	209
	Concluding Remarks	216
	Literature Cited	217
3	The Role of Flows of Energy and Resources in Structuring Ecological and Social Systems	220
	Commentary and Introduction	220
	Preface to Papers	224
	Article 11: Eric D. Schneider and James J. Kay (1995). Order from disorder: the thermodynamics of complexity in biology. In Michael P. Murphy and Luke A. J. O'Neill (editors), <i>What is Life: The Next Fifty Years. Reflections on the Future of Biology</i> , pp. 161–172. Cambridge: Cambridge University Press.	225
	Article 12: William A. Reiners (1986). Complementary models for ecosystems. <i>The American Naturalist</i> , 127, 59–73.	236
	Article 13: Stephen R. Carpenter, James F. Kitchell and James R. Hodgson (1985). Cascading trophic interactions and lake productivity. <i>BioScience</i> , 35, 634–639.	253
	Article 14: William E. Odum, Eugene P. Odum and Howard T. Odum (1995). Nature's pulsing paradigm. <i>Estuaries</i> , 18, 547–555.	260
	Article 15: Geoffrey B. West, James H. Brown and Brian J. Enquist (1997). A general model for the origin of allometric scaling laws in biology. <i>Science</i> , 276, 122–126.	271
	Concluding Remarks	278
	Literature Cited	278

4	Non-linearity in Natural, Physical and Social Systems	283
	Commentary and Introduction	283
	Preface to Papers	287
	Article 16: Robert M. May and George F. Oster (1976). Bifurcations and dynamic complexity in simple ecological models. <i>The American Naturalist</i> , 110, 573–599.	287
	Article 17: Ronald P. Neilson and L. H. Wullstein (1983). Biogeography of two southwest American oaks in relation to atmospheric dynamics. <i>Journal of Biogeography</i> , 10, 275–297.	316
	Article 18: William M. Schaffer and Mark Kot (1986). Chaos in ecological systems: the coals that Newcastle forgot. <i>Trends in Ecology and Evolution</i> , 1, 58–63.	340
	Article 19: Donald L. DeAngelis and Joyce C. Waterhouse (1987). Equilibrium and nonequilibrium concepts in ecological models. <i>Ecological Monographs</i> , 57, 1–21.	348
	Article 20: James J. Elser, Dean R. Dobberfuhl, Neil A. MacKay and John H. Schampel (1996). Organism size, life history, and N:P stoichiometry: toward a unified view of cellular and ecosystem processes. <i>BioScience</i> , 46, 674–684.	370
	Concluding Remarks	383
	Literature Cited	384
5	Applied Implications and Subversive Science	388
	Commentary and Introduction	388
	Preface to Papers	392
	Global Change Science	393
	Article 21: John L. Monteith (1977). Climate and the efficiency of crop production in Britain. <i>Transactions of the Royal Society</i> , 281, 277–294.	395
	Article 22: Peter M. Vitousek, Hal A. Mooney, Jane Lubchenco and Jerry M. Melillo (1997). Human domination of Earth's ecosystems. <i>Science</i> , 277, 494–499.	414
	Conservation Biology	421
	Article 23: H. Ronald Pulliam (1988). Sources, sinks, and population regulation. <i>The American Naturalist</i> , 132, 652–661.	423
	Article 24: Denis A. Saunders, Richard J. Hobbs and Chris R. Margules (1991). Biological consequences of ecosystem fragmentation: a review. <i>Conservation Biology</i> , 5, 18–32.	434

Article 25: Craig Loehle and Bai-Lian Li (1996). Habitat destruction and the extinction debt revisited. <i>Ecological Applications</i> , 6, 784–789.	451
Resilience Science and Surprise	457
Article 26: Donald Ludwig, Brian Walker and Crawford S. Holling (1997). Sustainability, stability, and resilience. <i>Conservation Ecology</i> , 1.	460
Article 27: Carl J. Walters and Ray Hilborn (1978). Ecological optimization and adaptive management. <i>Annual Review of Ecology and Systematics</i> , 8, 157–188.	481
Social Context of Complexity-Based Science and Conservation	514
Article 28: Silvio O. Funtowicz and Jerome R. Ravetz (1994). Uncertainty, complexity and post-normal science. <i>Environmental Toxicology and Chemistry</i> , 13, 1881–1885.	518
Article 29: Elinor Ostrom (1995). Designing complexity to govern complexity. <i>Property Rights and the Environment: Social and Ecological Issues</i> , pp. 33–45. Washington, DC: Beijer and World Bank.	526
Article 30: Donella Meadows (1999). Leverage points: places to intervene in a system. Hartland, VT: The Sustainability Institute.	540
Concluding Remarks	560
Literature Cited	561
Epilogue	567
Index	569
Preface to Papers	224
Article 11: Eric D. Schneider and James J. Kay (1991). Global Change Science: disorder, the thermodynamics of complexity, and the efficiency of information.	225
Article 12: Peter M. Vitousek, Hal A. Mooney, Jane Lubchenco and Jerry M. Melillo (1997). Human domination of Earth's ecosystems. <i>The American Naturalist</i> , 150, 157–172.	232
Article 13: Stephen R. Carpenter, James J. McCarthy, James R. Hodgson (1985). Cascading trophic interactions and ecosystem structure: implications for the control of ecosystem processes. <i>Ecology</i> , 66, 291–299.	252
Article 14: Dennis A. Saunders, Richard J. Hobbs and Chris R. Margules (1991). Biological consequences of ecosystem fragmentation: a review. <i>Conservation Biology</i> , 5, 18–28.	260
Concluding Remarks	271
