

Contents

1 Principles of sound radiation	1
R. D. Ford	
1.1 Introduction	1
1.2 The characteristics of sound waves	2
1.3 Decibels	3
1.4 Radiation from a simple source	3
1.5 Intensity and power	4
1.6 Radiation from a flat rigid circular piston in an infinite baffle	5
1.7 The acoustic impedance of a flat rigid circular piston in an infinite baffle	8
1.8 Radiation from a rectangular source	9
1.9 The acoustic impedance of an enclosure	11
1.10 Radiation from multiple-drive units	13
1.11 Radiation into other than 2π space	16
1.12 Horns	17
1.13 Electromechano-acoustic analogues	20
References	26
2 Transducer drive mechanisms	28
Stanley Kelly	
2.1 Historical introduction	28
2.2 Electromechanical analogues	36
2.3 Direct-radiator loudspeaker: the diaphragm	43
2.4 Motor units	61
2.5 Horn-drive units	92
2.6 Ribbon loudspeakers	99
References	104
3 Electrostatic loudspeakers	106
Peter J. Baxandall	
3.1 Introduction	106
3.2 Electrostatic drive theory	106
3.3 Radiating the sound	136
3.4 Practical designs	168
3.5 A general principle	193
3.6 Safety	193
3.7 Acknowledgement	193
References	194
4 Multiple driver loudspeakers	195
Laurie Fincham	
4.1 Introduction	195
4.2 Crossover networks – theoretical design criteria	196
4.3 Practical design procedures	212
References	216
Bibliography	217

5 The amplifier/loudspeaker interface	218
Martin Colloms	
5.1 Introduction	218
5.2 The loudspeaker electrical load	219
5.3 Impedance compensation	223
5.4 Conjugate impedance compensation	224
5.5 Sound level and amplifier power	225
5.6 Remote or built-in amplifiers	227
5.7 Damping factor and source resistance	228
5.8 Level rather than watts	228
5.9 Axial SPL and room loudness	229
5.10 Active loudspeaker systems	229
5.11 A typical active speaker system	232
5.12 Motional feedback (MFB)	234
5.13 Full-range feedback	235
5.14 Speaker adaptability	235
5.15 Digital loudspeakers	238
5.16 Cables and connectors	238
References	246
Bibliography	246
6 Loudspeaker enclosures	247
Desmond Thackeray	
6.1 Introduction	247
6.2 Bass driver mid-range response and air loading	249
6.3 The closed box enclosure	252
6.4 The vented enclosure	255
6.5 Horns	259
6.6 Tailpiece	261
References	263
Bibliography	263
7 The room environment	264
Glyn Adams	
7.1 Introduction	264
7.2 Basic room acoustics	265
7.3 Loudspeaker placement	282
7.4 Measurement of room acoustics	301
7.5 Listening room design	306
7.6 Frequency-response equalization	314
7.7 Acknowledgements	316
References	316
Bibliography	317
8 Sound reinforcement and public address	319
Peter Mapp	
8.1 Introduction	319
8.2 Loudspeakers and signal distribution	320
8.3 Loudspeaker coverage	322
8.4 Sound systems for auditoria	334
8.5 Time delay and the Haas effect	336
8.6 Response shaping	341
8.7 Speech intelligibility	347
8.8 Outdoor PA systems	350
8.9 Climatic effects	353
8.10 Sound-masking systems	355

8.11	Reverberation enhancement	356
8.12	Electronic architecture	360
8.13	Cinema sound systems	364
8.14	Microphones	367
	References	367
	Bibliography	368
9	Loudspeakers for studio monitoring and musical instruments	369
	Mark R. Gander	
9.1	Introduction	369
9.2	Studio monitor performance requirements	369
9.3	Significant monitor designs	371
9.4	Musical instrument direct-radiator driver constructions	380
9.5	Musical instrument loudspeaker enclosures and systems	392
	References	401
	Bibliography	406
10	Loudspeaker measurements	408
	John Borwick	
10.1	Introduction	408
10.2	Measurement standards	409
10.3	The measurement environment	409
10.4	Measuring conditions	413
10.5	Characteristics measurements: small signal	415
10.6	Large signal measurements: distortion-limited	433
10.7	Large signal measurements: damage limited	439
10.8	New directions	439
	Acknowledgement	440
	References	440
11	Subjective evaluation	442
	Floyd E. Toole	
11.1	Introduction	442
11.2	The listening room	443
11.3	Electrical requirements	450
11.4	Programme material	451
11.5	Stereo versus mono tests	452
11.6	Selection of listeners	454
11.7	Experimental procedure	455
11.8	Listener preferences and loudspeaker measurements	461
11.9	Conclusions	464
	References	464
12	Headphones	466
	C. A. Poldy	
12.1	Introduction	466
12.2	Acoustics of headphones	467
12.3	The hearing mechanism	490
12.4	Headphone application	512
12.5	Practical matters	532
	References	543
13	International standards	549
	J. M. Woodgate	
13.1	Introduction	549

13.2 Standards-making bodies	
13.3 Standards for loudspeakers	550
