

CONTENTS

Preface 9

- 1 DEFORMATION AND CREEP 13
 - 1.1 Deformation. Definition of Creep 13
 - 1.2 Time Dependence of Creep Strain. Creep Curve 14
 - 1.3 Mechanisms of Plastic Deformation: A General Survey 19
 - 1.4 Mechanical Equation of State 22
 - 1.5 Creep Test Compared with Tensile Test at Constant Strain Rate and Constant Loading Rate 26
 - 1.6 Creep Tests at Constant Load and Constant Stress 28
- 2 MOTION OF DISLOCATIONS. DYNAMIC RECOVERY 30
 - 2.1 Motion of Dislocations 30
 - 2.1.1 Dislocation Glide 30
 - 2.1.2 Dislocation Climb 32
 - 2.2 Free, Mobile and Moving Dislocations 35
 - 2.2.1 Measurements 35
 - 2.2.2 Models of Mobile Dislocation Density 37
 - 2.3 Dynamic Recovery 40
- 3 TEMPERATURE DEPENDENCE OF CREEP RATE 44
 - 3.1 Activation Energy of Creep 44
 - 3.2 Methods of Determination of Activation Energy of Creep 45
 - 3.3 Correction of Experimentally Determined Activation Energy of Creep for Temperature Dependence of Elastic Modulus 51
 - 3.4 Activation Energy of Creep and Activation Enthalpy of Diffusion 52
 - 3.4.1 Pure Metals 52
 - 3.4.2 Solid Solution Alloys 55
 - 3.4.3 Precipitation and Dispersion Strengthened Systems 58
- 4 APPLIED STRESS DEPENDENCE OF CREEP RATE 60
 - 4.1 Initial Creep Rate 60
 - 4.2 Steady-State Creep 60
 - 4.3 Transient Creep 63
- 5 INFLUENCE OF GRAIN SIZE AND STACKING FAULT ENERGY 65
 - 5.1 Grain Size 65
 - 5.2 Stacking Fault Energy 67

- 6 OROWAN AND BAILEY-OROWAN EQUATIONS 71
 - 6.1 Orowan Equation 71
 - 6.2 Bailey-Orowan Equation 72
 - 6.3 Relation Between Orowan Equation and Bailey-Orowan Equation 73
 - 6.4 A Consequence of the Equivalence of Orowan and Bailey-Orowan Equations 75
 - 6.5 Experimental Verification of Bailey-Orowan Equation. Experimental Determination of Quantities r and h 76
 - 6.6 Incubation Period and "Frictional" Stress 77
- 7 BACK STRESS 80
 - 7.1 Introduction 80
 - 7.2 Internal, Threshold and Frictional Stress 80
 - 7.3 Internal and Effective Stress 82
 - 7.3.1 Techniques of Measurement 82
 - 7.3.2 Modelling. Simulation of Strain Transient Dip Test Technique 85
 - 7.4 Concept of Internal and Effective Stress and the Mechanical Equation of State 88
 - 7.5 Definitions of Experimental Parameters 88
 - 7.6 Interpretation of Experimental Parameters 91
- 8 DISLOCATION STRUCTURE 95
 - 8.1 Introduction 95
 - 8.2 Development of Dislocation Structure during Creep 96
 - 8.3 Basic Quantitative Characteristics of Dislocation Structure 100
 - 8.4 Subgrain Structure 101
 - 8.5 Subgrain Structure and Long-Range Internal Stress 104
 - 8.6 Behaviour of Sub-boundaries 107
 - 8.7 Interaction of Dislocations with Sub-boundaries 109
 - 8.8 Generation of Dislocations 110
 - 8.9 Structural Steady State 111
 - 8.10 Concept of Hard and Soft Regions and Measured Internal Stress 112
- 9 DISLOCATION CREEP IN PURE METALS 115
 - 9.1 Introduction 115
 - 9.2 Creep Controlled by Recovery 116
 - 9.2.1 Dislocation Glide Creep 116
 - 9.2.1.1 Earlier Weertman's Models 116
 - 9.2.1.2 Models Involving the Role of Sub-boundaries 120
 - 9.2.1.3 Dislocation Network Models 129
 - 9.2.2 Dislocation Climb Creep: Nabarro Creep 133
 - 9.2.3 Climb and Glide Creep: Dislocation Core Diffusion 135
 - 9.3 Creep Controlled by Dislocation Glide 137
 - 9.3.1 Model of Jogged Screw Dislocations 138
 - 9.3.2 Cross Glide as Rate Controlling Process 140
 - 9.3.3 Hexagonal Metals: Glide in Non-basal Systems 143
 - 9.4 Models Based on Thermally Activated Glide and Diffusion Controlled Recovery 144
 - 9.5 Relation Between Constants A and n in the Dorn Creep Equation and the Natural Third Power Law 147
 - 9.6 Harper-Dorn Creep 150
 - 9.6.1 High Temperatures 151
 - 9.6.2 Intermediate Temperatures 155

- 10 CREEP IN SOLID SOLUTION ALLOYS 160
 - 10.1 Introduction. Mechanisms of Creep Strengthening in Solid Solutions 160
 - 10.2 Creep Controlled by Viscous Dislocation Glide 162
 - 10.2.1 Weertman's Theory 162
 - 10.2.2 Model of Friedel 164
 - 10.2.3 Model of Takeuchi and Argon 165
 - 10.2.4 Criterion for Class I Creep Behaviour 170
 - 10.2.5 Transition from Class I to Class II Creep Behaviour at High Stress Levels 172
 - 10.3 Concluding Remarks 174
- 11 CREEP IN PRECIPITATION AND DISPERSION STRENGTHENED ALLOYS 176
 - 11.1 Introduction 176
 - 11.2 Models of Ansell and Weertman 177
 - 11.3 Back Stress Concept 180
 - 11.3.1 Phenomenological Approach 180
 - 11.3.2 Origin of Threshold Stress 182
 - 11.3.2.1 Dislocation Climb-by-pass of Particles 183
 - 11.3.2.2 Models of Climb-by-pass of Particles 185
 - 11.3.2.3 Particle Cutting 197
 - 11.3.3 Determination of Back Stress 200
 - 11.4 Concluding Remarks 202
- 12 DIFFUSIONAL CREEP 205
 - 12.1 Introduction 205
 - 12.2 Nabarro-Herring and Coble Creep 206
 - 12.3 Subgrain Boundaries as Sources and Sinks for Vacancies 210
 - 12.4 Diffusional Creep and Grain Boundary Sliding 211
 - 12.5 Reactions on Grain Boundaries 212
 - 12.5.1 Diffusion Control 215
 - 12.5.2 Dislocation Mobility Control 218
 - 12.5.2.1 General 218
 - 12.5.2.2 Solute Drag Control 219
 - 12.5.2.3 Particle By-pass Control 220
 - 12.5.3 Solid Solution Alloys. Grain Boundary Migration 227
 - 12.6 Diffusional Cavitation Creep 229
 - 12.7 Concluding Remarks 231
- 13 DEFORMATION MECHANISM MAPS 235
 - 13.1 Introduction 235
 - 13.2 Equations Used for Construction of Deformation Mechanism Maps 236
 - 13.2.1 Pure Metals and Solid Solution Alloys 236
 - 13.2.2 Two-Phase Alloys 237
 - 13.3 Examples of Deformation Mechanism Maps 238
 - 13.3.1 16Cr-13Ni-2.5Mo Austenitic Stainless Steel.
Pure Aluminium: Influence of Grain Size 238
 - 13.3.2 Aluminium Strengthened by Alumina Particles 240
 - 13.3.3 Alpha Zirconium: Coble Creep and Harper-Dorn Creep Regimes 241
 - 13.4 "Generalized" Deformation Mechanism Map for Pure Metals 243
 - 13.5 Concluding Remarks 245

14	GRAIN BOUNDARY SLIDING	246
14.1	Introduction	246
14.2	Accommodation of Grain Boundary Sliding	246
14.3	Quantitative Characteristics of Grain Boundary Sliding	249
14.4	Survey of Basic Experimental Observations	252
14.5	Grain Boundary Sliding and Grain Boundary Migration	256
14.5.1	Lifshitz GBS	256
14.5.2	Rachinger GBS	256
14.6	Models of Grain Boundary Sliding	257
14.6.1	Intrinsic Sliding Models	258
14.6.2	Extrinsic Sliding Models	263
14.7	Grain Boundary Sliding Accommodated by Power-Law Creep: Model of Crossman and Ashby	266
14.8	Concluding Remarks	270
15	CREEP FRACTURE	271
15.1	Introduction	271
15.2	Nucleation of Intergranular Cavities	273
15.2.1	Theory of Nucleation	274
15.2.2	Stress Concentrations	278
15.2.2.1	Diffusional Creep Relaxation	278
15.2.2.2	Power-Law Creep Relaxation	280
15.2.2.3	Coupled Diffusional Creep and Power-Law Creep Relaxation	281
15.2.3	Other Models of Cavity Nucleation	282
15.2.4	Formation of Stable Cavities	285
15.2.5	Experimental Observations of Cavity Nucleation	285
15.2.6	Continuous Cavity Nucleation During Creep	288
15.2.7	Athermal Nucleation of Intergranular Microcracks	289
15.2.8	Wedge Cracks at Triple Grain Junctions	290
15.3	Growth of Cavities	292
15.3.1	Unconstrained Growth of Cavities	293
15.3.1.1	Entirely Diffusive Growth	293
15.3.1.2	Growth by Coupled Diffusion and Power-Law Creep	299
15.3.1.3	Cavity Growth on Sliding Grain Boundaries	306
15.3.2	Constrained Growth of Cavities	310
15.3.3	Experimental Measurements of Cavity Growth	316
15.3.4	Maps of Cavity Growth Mechanisms	319
15.4	Crack Propagation by Intergranular Cavitation	321
15.4.1	Theory of Wilkinson and Vitek	322
15.4.2	Experimental Observations	327
15.5	Time and Strain to Fracture	330
15.5.1	Cavity Growth Model Based Predictions of Time and Strain to Fracture	330
15.5.2	Monkman-Grant Relation	337
15.6	Transgranular Creep Fracture	339
15.7	Fracture Mechanism Maps	341
15.8	Concluding Remarks	343
	References	348
	Index	365
