I PRINCIPLES OF QUANTUM DEVICES

1. The Science and Technology of Quantum Optics	3
1.1 Quantum Mechanics—from Paradox to Paradigm	3
1.2 Coherence and Quantum Optics	4
1.2.1 Quantum Optics—its Scope and its Aims	4
1.2.2 Preparation, Control and Measurement of Composite Quantum Systems	5
1.2.3 Quantum Devices	5
1.2.4 Quantum Information Theory	6
1.3 Theoretical Quantum Optics	7
1.3.1 The Quantum Optical System-Environment Paradigm	7
1.3.2 The Electromagnetic Field as an Environment	8
1.3.3 Inputs and Outputs	8
1.4 Quantum Control and Quantum Processing	9
1.4.1 Implementing Quantum Control Using Trapped Ions	10
1.4.2 Several Trapped Ions—the Quantum Processor	13
1.5 Distributing Quantum Information	14
1.5.1 Quantum Networks	14
1.5.2 Cavity QED Systems	15
1.5.3 Superconducting Systems	16
1.6 Technologies for Quantum Processing	16
1.7 Summary	17
2. From Atoms to Qubits	18
2.1 Representing and Processing Quantum Information	18
2.1.1 Linear Unitary Evolution	19
2.1.2 Quantum Parallelism and Projective Measurements	21
2.2 The DiVincenzo Criteria for a Practical Quantum Computer	22
2.3 Universal Sets of Quantum Gates	23
2.3.1 One-Qubit Gates	24
2.3.2 Two-Qubit Gates	24

2.3.3	Two Different Universal Sets of Gates	25
2.4	Quantum Algorithms	26
2.4.1	Efficient Arithmetic Operations on a Quantum Computer	26
2.4.2	Determination of Periodicities Using Quantum Measurements	27
2.5	The Universal Quantum Simulator	29
2.5.1	Efficient Quantum Simulation	29
2.5.2	The Tasks for a Quantum Simulator	31
3.	Quantum Information	32
3.1	Entanglement	33
3.1.1	Entanglement of Pure States	34
3.1.2	Bipartite Entangled States	34
3.1.3	Bipartite Entanglement of Qubits	35
3.1.4	The Schmidt Decomposition	37
3.1.5	Multipartite Entanglement	39
3.1.6	Decoherence, Mixed States and Entanglement	40
3.2	Transferring Quantum Information	42
3.2.1	The No-Cloning Theorem	42
3.2.2	Teleportation	43
II	COHERENT OPTICAL MANIPULATION OF ATOMS	47
4.	The Two-Level System Approximation	47
4.1	An Atom Driven by a Classical Driving Field	47
4.1.1	Schrödinger Equation for a Multilevel Atom	48
4.1.2	Non-Resonant Driving and the AC Stark Shift	49
4.1.3	Two-Level Atoms and the AC Stark Shift	51
5.	Coherent Manipulation of Two-Level Systems	54
5.1	The Ideal Two-Level Atom Driven by a Classical Field	54
5.1.1	General Pulse Shape	54
5.1.2	Validity of the Rotating Wave Approximation	56
5.2	The Rabi Problem for a Square Pulse	56
5.2.1	The Pseudospin Formalism	57
5.2.2	The Bloch Sphere	58
5.2.3	The Bloch Equation	59
5.3	Dressed States of the Rabi Hamiltonian	61
5.3.1	Eigenvectors—the Dressed States	61
5.3.2	Eigenvalues—the Dressed Energy Levels	62
5.3.3	Quantum State Engineering	62
5.4	Adiabatic Passage along Dressed States	66

5.4.1	The Adiabatic Theorem and Berry's Phase	66
6.	Coherent Manipulation of Multilevel Systems	69
6.1	Three-Level Systems	69
6.1.1	The Λ -Configuration	70
6.1.2	Experimental Realization of the Λ -Configuration	72
6.2	Far-Detuned Raman Processes	72
6.2.1	The Dark State Configuration	74
6.2.2	Approximations in the Far-Detuned Case	75
6.2.3	Effect of Spontaneous Emission	76
6.3	Quantum State Engineering in the Raman Configuration	77
6.3.1	Adiabatic Population Transfer along a Dark State—STIRAP	77
6.3.2	Conditions for the Validity of the Adiabatic Transfer Procedure	78
7.	The Two-Level System Including Atomic Motion	80
7.1	Hamiltonian Including Kinetic and Electronic Terms	81
7.1.1	Interaction with a Travelling Wave	81
7.1.2	Basis States	81
7.1.3	Equations of Motion	82
7.2	Motion of an Atom in a Standing Light Wave	83
7.2.1	Basis States	84
7.2.2	Equations of Motion	84
7.2.3	Off-Resonant Excitation—Optical Lattice Potentials	87
7.3	Momentum Transfer by Adiabatic Passage	87
7.3.1	Solutions of the Equations of Motion	89
8.	Modelling Real Atoms	90
8.1	The Alkali Atoms	90
8.1.1	Separation of Valence Electron and Core Electrons	91
8.1.2	Electrostatic Interactions	91
8.1.3	The Radial Wavefunction of the Valence Electron	92
8.2	Atoms with More than One Valence Electron	94
8.2.1	Spectroscopic Notation	94
8.2.2	L - S Coupling of Angular Momenta	95
8.2.3	Spectral Terms for Alkali Atoms	97
8.3	Fine and Hyperfine Structure	97
8.3.1	Magnetic Moments	97
8.3.2	Electric Quadrupole Moment of the Nucleus	99
8.3.3	Spin Orbit Interaction and Fine Structure	99
8.3.4	Nuclear Spin and Hyperfine Structure	100
8.3.5	The Zeeman Effect	103
8.4	Interaction with Electromagnetic Radiation	104
8.4.1	Centre of Mass Hamiltonian	105
8.5	Electric Dipole Radiation for a Multilevel Transition	105
8.5.1	Electric Dipole Matrix Elements and Rabi Frequency	105

12.3.2 Cascaded Quantum Networks	174
13. Dissipative Dynamics of Driven Atoms	175
13.1 Formulation of the Optical Bloch Equations for a Two-Level System	175
13.1.1 System Hamiltonian	175
13.1.2 The Master Equation	176
13.2 Explicit Form and Solutions of the Optical Bloch Equations	177
13.2.1 The Zero Driving Field Case	178
13.2.2 Stationary Solution in the Presence of a Coherent Driving Field	178
13.2.3 Electric Polarization and Susceptibility	179
13.2.4 Time-Dependent Solutions	179
13.3 Dissipative Dynamics of the Λ -System	180
13.3.1 Parameters for the Three-Level System	181
13.3.2 System Hamiltonian	182
13.3.3 Master Equation	183
14. Multi-Atom Optical Bloch Equations	185
14.1 Coupling to Several Non-Independent Light Fields	185
14.1.1 Hamiltonian and Noise Operators	186
14.1.2 Decay Constants and Energy Shifts	186
14.1.3 Evaluation of Damping Constants	186
14.1.4 Evaluation of Lineshifts	188
14.2 Formulation of the Quantum Stochastic Equations	190
14.2.1 Correlated Quantum Ito Increments	190
14.2.2 Quantum Stochastic Differential Equation	190
14.3 The Many Atom Master Equation	191
14.3.1 Spontaneous Emission Rates and Dipole-Dipole Forces	191
14.3.2 Special Cases	192
14.3.3 Superradiance	194
14.A Appendix: Spherical Bessel Functions	198
IV LASER COOLING	
15. Quantum Stochastic Equations for Laser Cooling of Atoms	201
15.1 Notation and Hamiltonians	202
15.1.1 Electromagnetic Field and Hamiltonian	202
15.1.2 System Hamiltonian	202
15.1.3 Interaction Hamiltonian	203
15.2 Quantum Stochastic Differential Equation Formalism	203
15.2.1 Noise Operators	204
15.2.2 Total Noise Operator	204

15.2.3	Density of States	204
15.2.4	Quantum Noise Increments	205
15.2.5	Quantum Stochastic Schrödinger Equation	205
15.2.6	Equivalence to a Single Set of Noise Increments	206
15.3	Recoil Effects	206
15.3.1	The Model	207
15.3.2	The Atom	207
15.3.3	The Radiation Field	208
15.3.4	The Interaction Hamiltonian	208
15.3.5	Quantum Stochastic Schrödinger Equation Including Atomic Motion	208
15.4	The Laser Cooling Master Equation	210
16.	Laser Cooling of Untrapped Atoms	212
16.1	Wigner Representation of the Atomic Density Matrix	212
16.1.1	Internal and Centre of Mass Degrees of Freedom	213
16.1.2	Evolution Equation for the Wigner Distribution Function	213
16.2	Doppler Cooling of a Two-Level System Using a Travelling Light Wave	214
16.2.1	Equation for the Wigner Function	215
16.2.2	Evolution Operators and Stationary Solutions	215
16.2.3	Projectors	219
16.2.4	Adiabatic Elimination Procedure	222
16.2.5	The Laser Cooling Fokker–Planck Equation	223
16.2.6	Evaluation of the Diffusion Coefficient \mathcal{D}_{zz}	224
16.3	Summary	226
17.	Laser Cooling of a Trapped Ion	228
17.1	Formulation of a One-Dimensional Model	228
17.1.1	Hamiltonian Terms	228
17.1.2	Laser Cooling Terms	229
17.1.3	The Full Master Equation for Cooling of a Trapped Ion	230
17.2	Perturbation in Terms of the Lamb–Dicke Parameter	230
17.2.1	Perturbative Expansion of the Master Equation	230
17.2.2	Elimination of the Internal Degrees of Freedom	232
17.3	Analysis of the Ion Trap Master Equation	234
17.3.1	The Harmonic Oscillator Trap	234
17.3.2	Solutions of the Ion Trap Master Equation	236
17.4	Analysis of the Process of Cooling	239
17.4.1	Doppler Cooling of a Trapped Ion	239
17.4.2	Sideband Cooling	240

V CONTINUOUS MEASUREMENT AND QUANTUM TRAJECTORIES	171
18. Continuous Measurement	243
18.1 Photon Counting	244
18.1.1 The Normally Ordered Counting Formulae	244
18.1.2 Measurement Operators for the Electromagnetic Field	245
18.2 Photon Counting Formulae	246
18.2.1 Photon Counting Statistics	248
18.2.2 Classical and Non-Classical Light	250
18.2.3 Photon Counting Correlation Functions	251
18.3 Quantum Operations	251
18.3.1 Definition of a Quantum Operation	252
18.3.2 Quantum Operations on the Wavefunction	254
18.3.3 Measurement Operators for the Electromagnetic Field	255
18.4 Photon Counting Using the Quantum Stochastic Schrödinger Equation	256
18.4.1 Compact Notation	257
18.4.2 Formulation of Photon Counting Using Quantum Operations	257
18.4.3 Quantum Operations Induced on the System	259
18.4.4 Probability Density of the First Detection Time	260
18.4.5 Resolution in Terms of Photon Counts	261
18.5 Photon Count Hierarchies	262
18.5.1 Resolution of the System Density Operator	262
18.5.2 Comparison with the Classical Poisson Process	263
18.6 Unravelling the System Density Operator	265
18.6.1 Photon Counting Statistics	265
18.6.2 Density Operator after n Counts	266
19. Quantum Trajectories	267
19.1 Stochastic Wavefunction Simulations	268
19.1.1 Stochastic Interpretation	268
19.1.2 Hierarchy of Equations	269
19.1.3 Probabilities	269
19.2 Stochastic Wavefunction Algorithms	270
19.3 Applications	270
19.3.1 Spontaneous Emission from a Two-Level Atom	271
19.3.2 The Driven Two-Level System	273
19.3.3 The Damped Cavity Mode	276
19.4 Quantum Jumps in Three-Level Systems	279
19.4.1 Theoretical Description	280
19.4.2 Photon Detections in Terms of the Delay Function	281

VI PHASE-SENSITIVE QUANTUM OPTICS

20. Homodyne Measurement	285
20.1 Procedure for Homodyne and Heterodyne Detection	286
20.1.1 General Formulae	286
20.1.2 Coherent Signal Detection	288
20.1.3 Balanced Homodyne/Heterodyne Detection	290
20.A Appendix: Quantum Stochastic Equations for Homodyne Measurement	292
20.A.1 Ideal Homodyne Measurement	292
20.A.2 Quadrature Phases and Homodyne Current	293
20.A.3 Ito Increments for Quadrature Phases	293
20.A.4 Measurement Operators for Eigenvalues with a Continuous Range	293
20.A.5 Formulation of the Quantum Stochastic Schrödinger Equation	294
20.A.6 Master Equation	295
20.A.7 Continuous Measurement of the Quadrature Phase Components	295
21. Squeezing, Quantum Correlations and Quantum Amplifiers	301
21.1 Single-Mode Squeezing and Quantum Noise Reduction	302
21.1.1 Heisenberg's Uncertainty Principle	302
21.1.2 Quadrature Phases	303
21.1.3 Defining Squeezing	303
21.1.4 Squeezed States of the Harmonic Oscillator	304
21.1.5 Definition of an Ideal Squeezed State	306
21.2 Production and Measurement of Squeezed Light	308
21.2.1 The Degenerate Parametric Amplifier	309
21.2.2 Quantum Langevin Equation	310
21.2.3 Squeezing Produced	312
21.2.4 Input-Output View of Squeezing and the Ideal Phase-Sensitive Amplifier	314
21.3 Two-Mode Squeezing and Correlated Quanta	315
21.3.1 Quadrature Phases	316
21.4 Quantum Limited Phase-Insensitive Amplifiers	316
21.4.1 Identical Couplings to the Input and Output	317
21.4.2 Input and Output Coupled to Only One Mode	319
21.5 Quantum Limits on Noise in Linear Amplifiers	321
21.5.1 Fundamental Limits on Added Quantum Noise—the Caves Amplifier Noise Bound	321
21.5.2 Attenuators and Beam Splitters	322

VII QUANTUM PROCESSING WITH ATOMS, PHOTONS AND PHONONS

22. Cavity Quantum Electrodynamics	327
22.1 The Jaynes–Cummings Model	327
22.1.1 Implementations of Cavity Quantum Electrodynamics	328
22.1.2 Details of the Jaynes–Cummings Hamiltonian	329
22.1.3 Energy Levels and Eigenstates	330
22.1.4 Eigenvalues and Eigenvectors—the Dressed States	331
22.1.5 The Dressed Hamiltonian in the Far-Detuned Limit	333
22.1.6 Rabi Oscillations in the Jaynes–Cummings Model	334
22.2 Interaction with the Environment	336
22.2.1 Master Equation	336
22.2.2 The Strong Coupling Condition	337
23. Optical Manipulation of Trapped Ions	339
23.1 The Trapped Ion Hamiltonian	339
23.1.1 Components of the Trapped Ion Hamiltonian	340
23.1.2 Electronic excitation	341
23.1.3 Interaction with Laser Light	341
23.1.4 Manipulation of the Quantum State of the Centre of Mass	341
23.1.5 The Lamb–Dicke Regime	342
23.1.6 Total Hamiltonian in the Rotating Frame	342
23.1.7 Energy Spectrum and Eigenstates of the Bare Hamiltonian	343
23.1.8 Interaction with the Quantized Electromagnetic Field	344
23.2 Laser-Induced Couplings in the Lamb–Dicke Regime	344
23.2.1 Approximate Forms in the Lamb–Dicke Regime	345
23.2.2 Effective Hamiltonians Arising from Laser Induced Couplings	346
23.3 Quantum State Engineering	347
23.3.1 Superpositions of Electronic States	347
23.3.2 Conversion of Electronic Superpositions to Motional Superpositions	347
23.3.3 Generation of an Arbitrary Superposition of Motional States	348
23.A Appendix: Radio-Frequency Ion Traps	350
23.A.1 Classical Equations of Motion	350
23.A.2 Quantum Theory of Ion Traps	354
24. The Ion Trap Quantum Computer	358
24.1 Ions in a Linear Trap	359
24.1.1 Two Ions in a Linear Trap	359
24.1.2 N Atoms in a Linear Trap	361
24.2 Implementation of a Two-Qubit Quantum Gate	362
24.2.1 Representation of Qubits	363
24.2.2 Manipulation of Qubits	363

24.2.3 Basic Gate Operations	364
24.2.4 The Controlled Phase Gate	366
24.3 Mølmer–Sørensen Gate	368
24.3.1 Gate Hamiltonian	369
24.3.2 Transition Paths	370
24.3.3 Effective Spin Hamiltonian	372
24.3.4 Use as a Two-Qubit Gate	372
24.3.5 Creation of GHZ-Like States	373
24.3.6 Creation of Many-Body Entanglement	374
24.3.7 Summary	375
24.4 Geometric Phase Gates	375
24.4.1 Geometric Phase in a Harmonic Oscillator	375
24.4.2 Phase of Two Ions	377
24.5 The Ion Trap Quantum Computer in Practice	379
24.5.1 Quantum Computing Using Multiple Ion Traps on a Chip	380

VIII CIRCUIT QUANTUM ELECTRODYNAMICS

25. Quantum Circuit Theory	383
25.1 The <i>LC</i> Oscillator	383
25.1.1 Lagrangian and Hamiltonian	384
25.1.2 Quantization of the Oscillator	385
25.2 The Transmission Line	388
25.2.1 Transmission Line Wave Equation	388
25.2.2 The Flux Potential and the Lagrangian Formulation	389
25.2.3 Boundary Conditions	390
25.3 Transmission Lines Coupled to Circuits	391
25.3.1 Parallel Coupling of the <i>LC</i> Oscillator to a Transmission Line	391
25.3.2 Series Coupling of the <i>LC</i> Oscillator to a Transmission Line	393
25.3.3 An Oscillator Embedded in a Transmission Line	394
25.4 Lagrangian Formulation of Circuits Coupled to Transmission Lines	396
25.4.1 Voltage Coupling	396
25.5 Quantization of the Transmission Line	398
25.5.1 The Finite Transmission Line	398
25.5.2 Coupling to an <i>LC</i> Circuit	399
25.A Appendix: The Wave Equation in One Dimension	400
25.A.1 Green’s Functions	400
25.A.2 The Causal Green’s Function	400
25.A.3 Time-Dependent Source of Fixed Shape	400
26. Superconducting Quantum Devices	402
26.1 The Josephson junction	402

26.1.1	Analysis of the Hamiltonian	403
26.1.2	Flux and Charge as Canonical Co-ordinate and Momentum	405
26.1.3	Operator Form of the Hamiltonian	405
26.1.4	Equations of Motion for a Josephson Junction	406
26.1.5	The Josephson Junction as a Non-Linear Inductor	407
26.2	The Josephson Junction as a Circuit Element	408
26.2.1	Josephson Oscillations	408
26.2.2	The Open Circuit Configuration	410
26.3	Qubit Architectures	411
26.3.1	The Transmon Qubit	412
26.3.2	Formulation as Cavity QED	413
26.3.3	Measurement of the Output	416
26.3.4	Other Qubit Architectures	417
26.4	Josephson Junction Amplification	417
26.4.1	The Josephson Ring Modulator	418

IX INTERFACING QUANTUM NETWORKS

27.	Cavity Quantum Electrodynamics Networks	423
27.1	The Cavity QED Quantum Memory	423
27.1.1	Hamiltonian for the Atom-Cavity System	424
27.1.2	Adiabatic Elimination of the Excited State	424
27.1.3	Interaction with Input and Output Fields	425
27.1.4	Quantum Information Transfer to the Electromagnetic Field	427
27.1.5	A Programmable Single Photon Source	427
27.2	Quantum Information Transfer between Nodes	429
27.2.1	The Problem of Photon Reflection from the Second Cavity	429
27.2.2	The Cavity QED Model of Quantum Information Transmission	429
27.2.3	Achieving Ideal Quantum Transmission	430
27.2.4	Use of the Quantum Trajectory Picture	431
28.	The Dark-State Ensemble Quantum Memory	434
28.1	Quantum Memory Using an Ensemble of Λ -Systems	435
28.1.1	Hamiltonian for N Three-Level Atoms	435
28.1.2	The Family of Dark States	437
28.1.3	The Principle of the Dark State Quantum Memory	439
28.2	Approximate Equations of Motion	439
28.2.1	The Harmonic Approximation to an Ensemble of Atoms	439
28.2.2	Equations of Motion in the Harmonic Oscillator Approximation	441
28.3	Quantum State Transfer and Quantum Memory	442

28.3.1	The Λ -I Configuration	443
28.3.2	The Information Transfer Process	445
28.3.3	Storing the Quantum Information	448
28.3.4	Transferring the Stored Input to the Output	448
28.3.5	The Λ -II Configuration	450
29.	Spatially Extended Atomic Ensembles	453
29.1	Light Propagation in an Atomic Vapour—Semiclassical Theory . . .	453
29.1.1	Electric Polarization and Susceptibility	454
29.1.2	Perturbative Regime in the Probe Field—Susceptibility	456
29.1.3	Electromagnetically Induced Transparency	457
29.2	Propagation in One Dimension	457
29.2.1	The Wave Equation	458
29.2.2	Absorptive and Dispersive Behaviour	459
29.2.3	The Transparency Window	461
29.2.4	Slow Light	462
29.3	Quantum Theory of Light Propagation in an Atomic Vapour	464
29.3.1	One-Dimensional Electromagnetic Field Operators	464
29.3.2	Spatially Dependent Collective Atomic Operators	465
29.3.3	Hamiltonian and Equations of Motion	466
29.3.4	Solutions of the Equations of Motion	467
29.4	Quantum Memory Using Dark State Polaritons	468
29.4.1	Interpretation as Dark-State Polaritons	468
29.4.2	Stopping and Re-Accelerating Photon Wavepackets	469
	References	470
	Author Index	483
	Subject Index	485
