

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Computer Simulation as a Tool for Materials Science .....	1
1.2	Modeling of Natural Phenomena .....	2
<b>2</b>	<b>Ab Initio Methods</b> .....	7
2.1	Introduction .....	7
2.2	Hartree–Fock and Density Functional Approaches .....	8
2.2.1	Quantum Mechanics of Identical Particles .....	9
2.2.2	Virial Theorem .....	12
2.2.3	The Hartree–Fock (HF) Approximation .....	13
2.2.4	Electron Correlations Beyond the HF Approximation .....	18
2.2.5	Density Functional Theory .....	21
2.2.6	Local Density Approximation (LDA) .....	26
2.2.7	Generalized Gradient Approximation (GGA) .....	32
2.2.8	Self-interaction Correction (SIC) .....	36
2.2.9	LDA + $U$ , GGA + $U$ .....	38
2.2.10	Hybrid Functionals .....	39
2.3	Explicit Methods to Calculate Electronic Structures .....	43
2.3.1	Periodic Systems .....	43
2.3.2	Group Theory .....	49
2.3.3	LCAO, OPW and Mixed-Basis Approaches .....	56
2.3.4	Pseudopotential Approach .....	63
2.3.5	APW Method .....	65
2.3.6	KKR, LMTO and ASW Methods .....	69
2.3.7	Some General Remarks .....	72
2.3.8	Ab Initio $O(N)$ and Related Methods .....	75
2.4	Perturbation and Linear Response .....	81
2.4.1	Effective-Mass Tensor .....	81
2.4.2	Dielectric Response .....	83
2.4.3	Magnetic Susceptibility .....	87

2.4.4	Chemical Shift . . . . .	89
2.4.5	Phonon Spectrum . . . . .	91
2.4.6	Electrical Conductivity . . . . .	96
2.4.7	Thermal Conductivity . . . . .	99
2.4.8	Time-Dependent Density Functional Theory . . . . .	108
2.4.9	Dynamical Mean Field Theory, Density Matrix Renormalization Theory, and Tensor Network . . . . .	109
2.5	Ab Initio Molecular Dynamics . . . . .	117
2.5.1	Car–Parrinello Method . . . . .	117
2.5.2	Steepest Descent, Conjugate Gradient, and Block Davidson Methods . . . . .	120
2.5.3	Formulation with Plane Wave Basis . . . . .	121
2.5.4	Formulation with Other Bases . . . . .	123
2.5.5	Application to Fullerene Systems . . . . .	125
2.5.6	Application to Point Defects in Crystals . . . . .	129
2.5.7	Application to Other Systems . . . . .	131
2.5.8	Coherent Potential Approximation (CPA) . . . . .	134
2.6	Beyond the Born . . . . .	136
2.7	Quasiparticle Theory and Green’s Function Methods . . . . .	141
2.7.1	Quasiparticle (QP) Theory . . . . .	141
2.7.2	Green’s Function Formalism . . . . .	148
2.7.3	GW Approximation . . . . .	157
2.7.4	Exchange and Coulomb Holes . . . . .	169
2.7.5	Vertex Correction . . . . .	170
2.7.6	Inclusion of Ladder Diagrams . . . . .	173
2.7.7	Further Remarks: Cusp Condition and Parquet Diagrams . . . . .	177
	References . . . . .	181
<b>3</b>	<b>Tight-Binding Methods . . . . .</b>	<b>199</b>
3.1	Introduction . . . . .	199
3.2	Tight-Binding Formalism . . . . .	200
3.2.1	Tight-Binding Parametrization . . . . .	201
3.2.2	Calculation of the Matrix Elements . . . . .	203
3.2.3	Total Energy . . . . .	204
3.2.4	Forces . . . . .	205
3.3	Methods to Solve the Schrödinger Equation for Large Systems . . . . .	207
3.3.1	The Density Matrix $O(N)$ Method . . . . .	207
3.3.2	The Recursion Method . . . . .	211
3.3.3	Recursive Green’s Function Method . . . . .	213

3.4	Self-consistent Tight-Binding Formalism . . . . .	214
3.4.1	Parametrization of the Coulomb Integral $U$ . . . . .	217
3.5	Applications to Fullerenes, Silicon and Transition-Metal Clusters . . . . .	219
3.5.1	Fullerene Collisions . . . . .	220
3.5.2	$C_{240}$ Doughnuts and Their Vibrational Properties . . . . .	221
3.5.3	IR Spectra of $C_{60}$ and $C_{60}$ Dimers . . . . .	221
3.5.4	Simulated Annealing of Small Silicon Clusters . . . . .	225
3.5.5	Titanium and Copper Clusters . . . . .	227
3.6	Conclusions . . . . .	228
	References . . . . .	229
<b>4</b>	<b>Empirical Methods and Coarse-Graining . . . . .</b>	<b>231</b>
4.1	Introduction . . . . .	231
4.2	Reduction to Classical Potentials . . . . .	232
4.2.1	Polar Systems . . . . .	233
4.2.2	Van der Waals Potential . . . . .	235
4.2.3	Potential for Covalent Bonds . . . . .	237
4.2.4	Embedded-Atom Potential . . . . .	240
4.3	Cluster Expansion . . . . .	241
4.3.1	Lattice Gas Model . . . . .	242
4.3.2	The Connolly–Williams Approximation . . . . .	242
4.4	Potential Renormalization . . . . .	244
4.4.1	Basic Idea: Two-Step Renormalization Scheme . . . . .	244
4.4.2	The First Step . . . . .	246
4.4.3	The Second Step . . . . .	248
4.4.4	Application to Si . . . . .	250
4.4.5	Application to FePt Alloys . . . . .	252
	References . . . . .	259
<b>5</b>	<b>Monte Carlo Methods . . . . .</b>	<b>261</b>
5.1	Introduction . . . . .	261
5.2	Basis of the Monte Carlo Method . . . . .	262
5.2.1	Stochastic Processes . . . . .	263
5.2.2	Markov Process . . . . .	265
5.2.3	Ergodicity . . . . .	269
5.3	Algorithms for Monte Carlo Simulation . . . . .	273
5.3.1	Random Numbers . . . . .	273
5.3.2	Simple Sampling Technique . . . . .	276
5.3.3	Importance Sampling Technique . . . . .	278
5.3.4	General Comments on Dynamic Models . . . . .	281
5.4	Applications . . . . .	283

5.4.1	Systems of Classical Particles . . . . .	283
5.4.2	Modified Monte Carlo Techniques . . . . .	286
5.4.3	Percolation . . . . .	290
5.4.4	Polymer Systems . . . . .	292
5.4.5	Classical Spin Systems . . . . .	297
5.4.6	Nucleation . . . . .	311
5.4.7	Crystal Growth . . . . .	316
5.4.8	Fractal Systems . . . . .	319
	References . . . . .	332
<b>6</b>	<b>Quantum Monte Carlo (QMC) Methods . . . . .</b>	<b>339</b>
6.1	Introduction . . . . .	339
6.2	Variational Monte Carlo (VMC) Method . . . . .	340
6.3	Diffusion Monte Carlo (DMC) Method . . . . .	342
6.4	Path-Integral Monte Carlo (PIMC) Method . . . . .	346
6.5	Quantum Spin Models . . . . .	349
6.6	Other Quantum Monte Carlo Methods . . . . .	350
