

CONTENTS

1. Periodic steady state, 5

- 1.1 Fourier series, 5
- 1.2 The root mean square value and the distortion factor, 8
- 1.3 Average power calculations with periodic functions, 9
- 1.4 Periodic steady state analysis in linear circuits, 12

2. Operational analysis of transients, 19

- 2.1 Introduction, 19
- 2.2 Fourier Transform, 19
- 2.3 Laplace transform, 25
- 2.4 Operational circuit functions, 27
- 2.5 Examples of transient analysis, 30
- 2.6 Transient responses, 36

3. Circuits with multi-terminal elements, 45

- 3.1 Introduction, 45
- 3.2 Two-port characteristics, 46
- 3.3 Transfer properties of two-ports, 51
- 3.4 Two-port connections, 54
- 3.5 Basic two-ports, 57
- 3.6 Feedback, 60
- 3.7 Characteristics of multi-terminals, 70
- 3.8 Generalized nodal voltage analysis, 72

4. Transmission lines, 75

- 4.1 Introduction, 75
- 4.2 Parameters of transmission lines, 75
- 4.3 Basic and wave equations, 76
- 4.4 Lossless line, 77
- 4.5 Sinusoidal steady state, 85
- 4.6 Line of the finite length, 91
- 4.7 Reflection coefficient, 95
- 4.8 Standing waves, 96
- 4.9 Stationary and periodic steady states, 98

5. Non-linear circuits, 100

- 5.1 Introduction, 100
- 5.2 Circuit elements, 101
- 5.3 Approximation of the characteristics of non-linear elements, 106
- 5.4 Analysis of non-linear resistive circuits - analytical methods, 110
- 5.5 Analysis of non-linear resistive circuits - graphical methods, 113
- 5.6 Analysis of non-linear resistive circuits - numerical methods, 118
- 5.7 Thermoinertial resistors, 123

6. Recommended books, 129

7. Appendices, 130
