

TABLE OF CONTENTS

PREFACE	3
TABLE OF CONTENTS	5

I. ASSIGNMENTS FROM HAEMATOLOGY

1. Collection of blood for haematological and other examination	9
2. Measurement of erythrocyte sedimentation rate	10
3. Determination of the number of blood elements in peripheral blood	11
— Erythrocyte count	13
— Leucocyte count	13
— Thrombocyte count	13
4. Reticulocyte count	14
5. Measurement of red cell diameter	14
6. Differential leucocyte count	16
7. Haematocrit	16
8. Photometric determination of haemoglobin content in the blood	17
9. Determination of the bleeding time according to Ivy	18
10. Whole-blood coagulation time test by the Lee-White method	18
11. Activated partial thromboplastin time (APTT)	19
12. Quick's test	20
13. Determination of the ABO system in man	21
14. Determination of Rh group by glass test	22
15. Examination of bloods compatibility before transfusion	23

II. ASSIGNMENTS FROM CARDIOVASCULAR PHYSIOLOGY

16. Electrocardiogram	25
— Characteristics of the instruments Chirastar 60 and Biocard	25
— Leads attachment	28
— ECG recording with Chirastar 60	29
— Evaluation of ECG	29
— Calculation of the average heart rate from the ECG	29
— Construction of the electrical heart axis	30
— ECG recording with Biocard	30
17. Palpation — method for pulse examination	30
18. Determination of blood pressure by the auscultatory method	31
19. Adrenaline influence on the blood flow through human skin	32
20. Test of blood capillary fragility after Rumpel-Leed	32
21. Functional tests of cardiovascular system	33

III. ASSIGNMENTS FROM RESPIRATORY PHYSIOLOGY

22. Static and dynamic volumes of lungs	39
A. Characteristics of apparatuses Chiraspir and Spirex	39
B. Determination of static and dynamic lung volumes and oxygen consumption on apparatus Chiraspir	44
1. Determination of minute ventilation (MV), tidal volume (V _T) and frequency of breathing (df)	44
2. Testing ERV	44
3. Testing IRV	44
4. Measurement of MVV	44
5. Testing EVC	45
6. Testing FVC and PEF	45
7. Measurement of oxygen consumption per minute using the apparatus Chiraspir	45
C. Determination of lung volumes on apparatus Spirex	46
1. Measuring VC	46
2. Volume-time curve of FEV	46
23. Ventilatory equivalent O ₂ and CO ₂	47
24. Ventilatory response on a continual increasing of carbon dioxide in inspired air	48
25. Voluntary apnoea	49

IV. ASSIGNMENTS FROM ENERGY METABOLISM

26. Determination of metabolic rate	50
1. Setting of gas analyser Spirolyt for measurement	52
2. Measurement proper	53
3. Record evaluation and calculation of oxygen consumption and CO ₂ output	53
4. Calculation of resting metabolic rate	53
5. Determination of metabolic rate during constant physical load	54
6. Calculation of oxygen debt	56
7. Determination of efficiency of muscular work	56
27. Determination of the combustion heat of food in the bomb calorimeter	57
28. Devising the menu according to energetic and biologic requirements	58

V. ASSIGNMENTS FROM PHYSIOLOGY OF THE MUSCULAR AND NERVOUS SYSTEM

29. Recording spontaneous electrical activity of human brain	60
30. Recording of muscle action potentials through intact skin in human organism and calculation of conduction velocity of nervous impulses in the fibres of the n. medianus, n. ulnaris, n. radialis, n. tibialis and n. peroneus	64
31. Measurement of chronaxie in man	70
32. Reflex examination	71

VI. ASSIGNMENTS FROM SPECIAL SENSORY PHYSIOLOGY

33. Ophthalmoscopy	73
34. Mariott's test	74
35. Purkinje's images	74
36. Perimetry	75
37. Determination of near and far points of the eye	77
38. Determination of visual acuity	78
39. Examination of colour vision	79
40. Binocular vision, stereoscopy	80
41. Determination of auditory threshold	80
42. Hearing test by tuning forks	82
